Artificial Intelligence is the future, and Apple's own AI project, Apple Intelligence. is amazing. It's available on all key Apple devices, including the Mac, iPhone, iPad, Apple Watch and Apple Vision Pro, and it helps you use your Apple gear in ways that were previously impossible.

If your writing needs a brush-up, check out the AI-powered Writing Tools. If you need a picture but you can't draw, Image Playground is the answer. And for international travellers and those who make phone calls to people who speak a different language, you need Live Translation.

In this series, we show you how to use Apple's key Apple Intelligence apps and features. We also take a quick peek at some of the apps in which Apple Intelligence might be used, such as the Mail and Notes apps for Writing Tools and Photos for Clean Up. With our help, you can polish up your AI skills and get even more from your amazing Apple devices. Welcome to tomorrow!

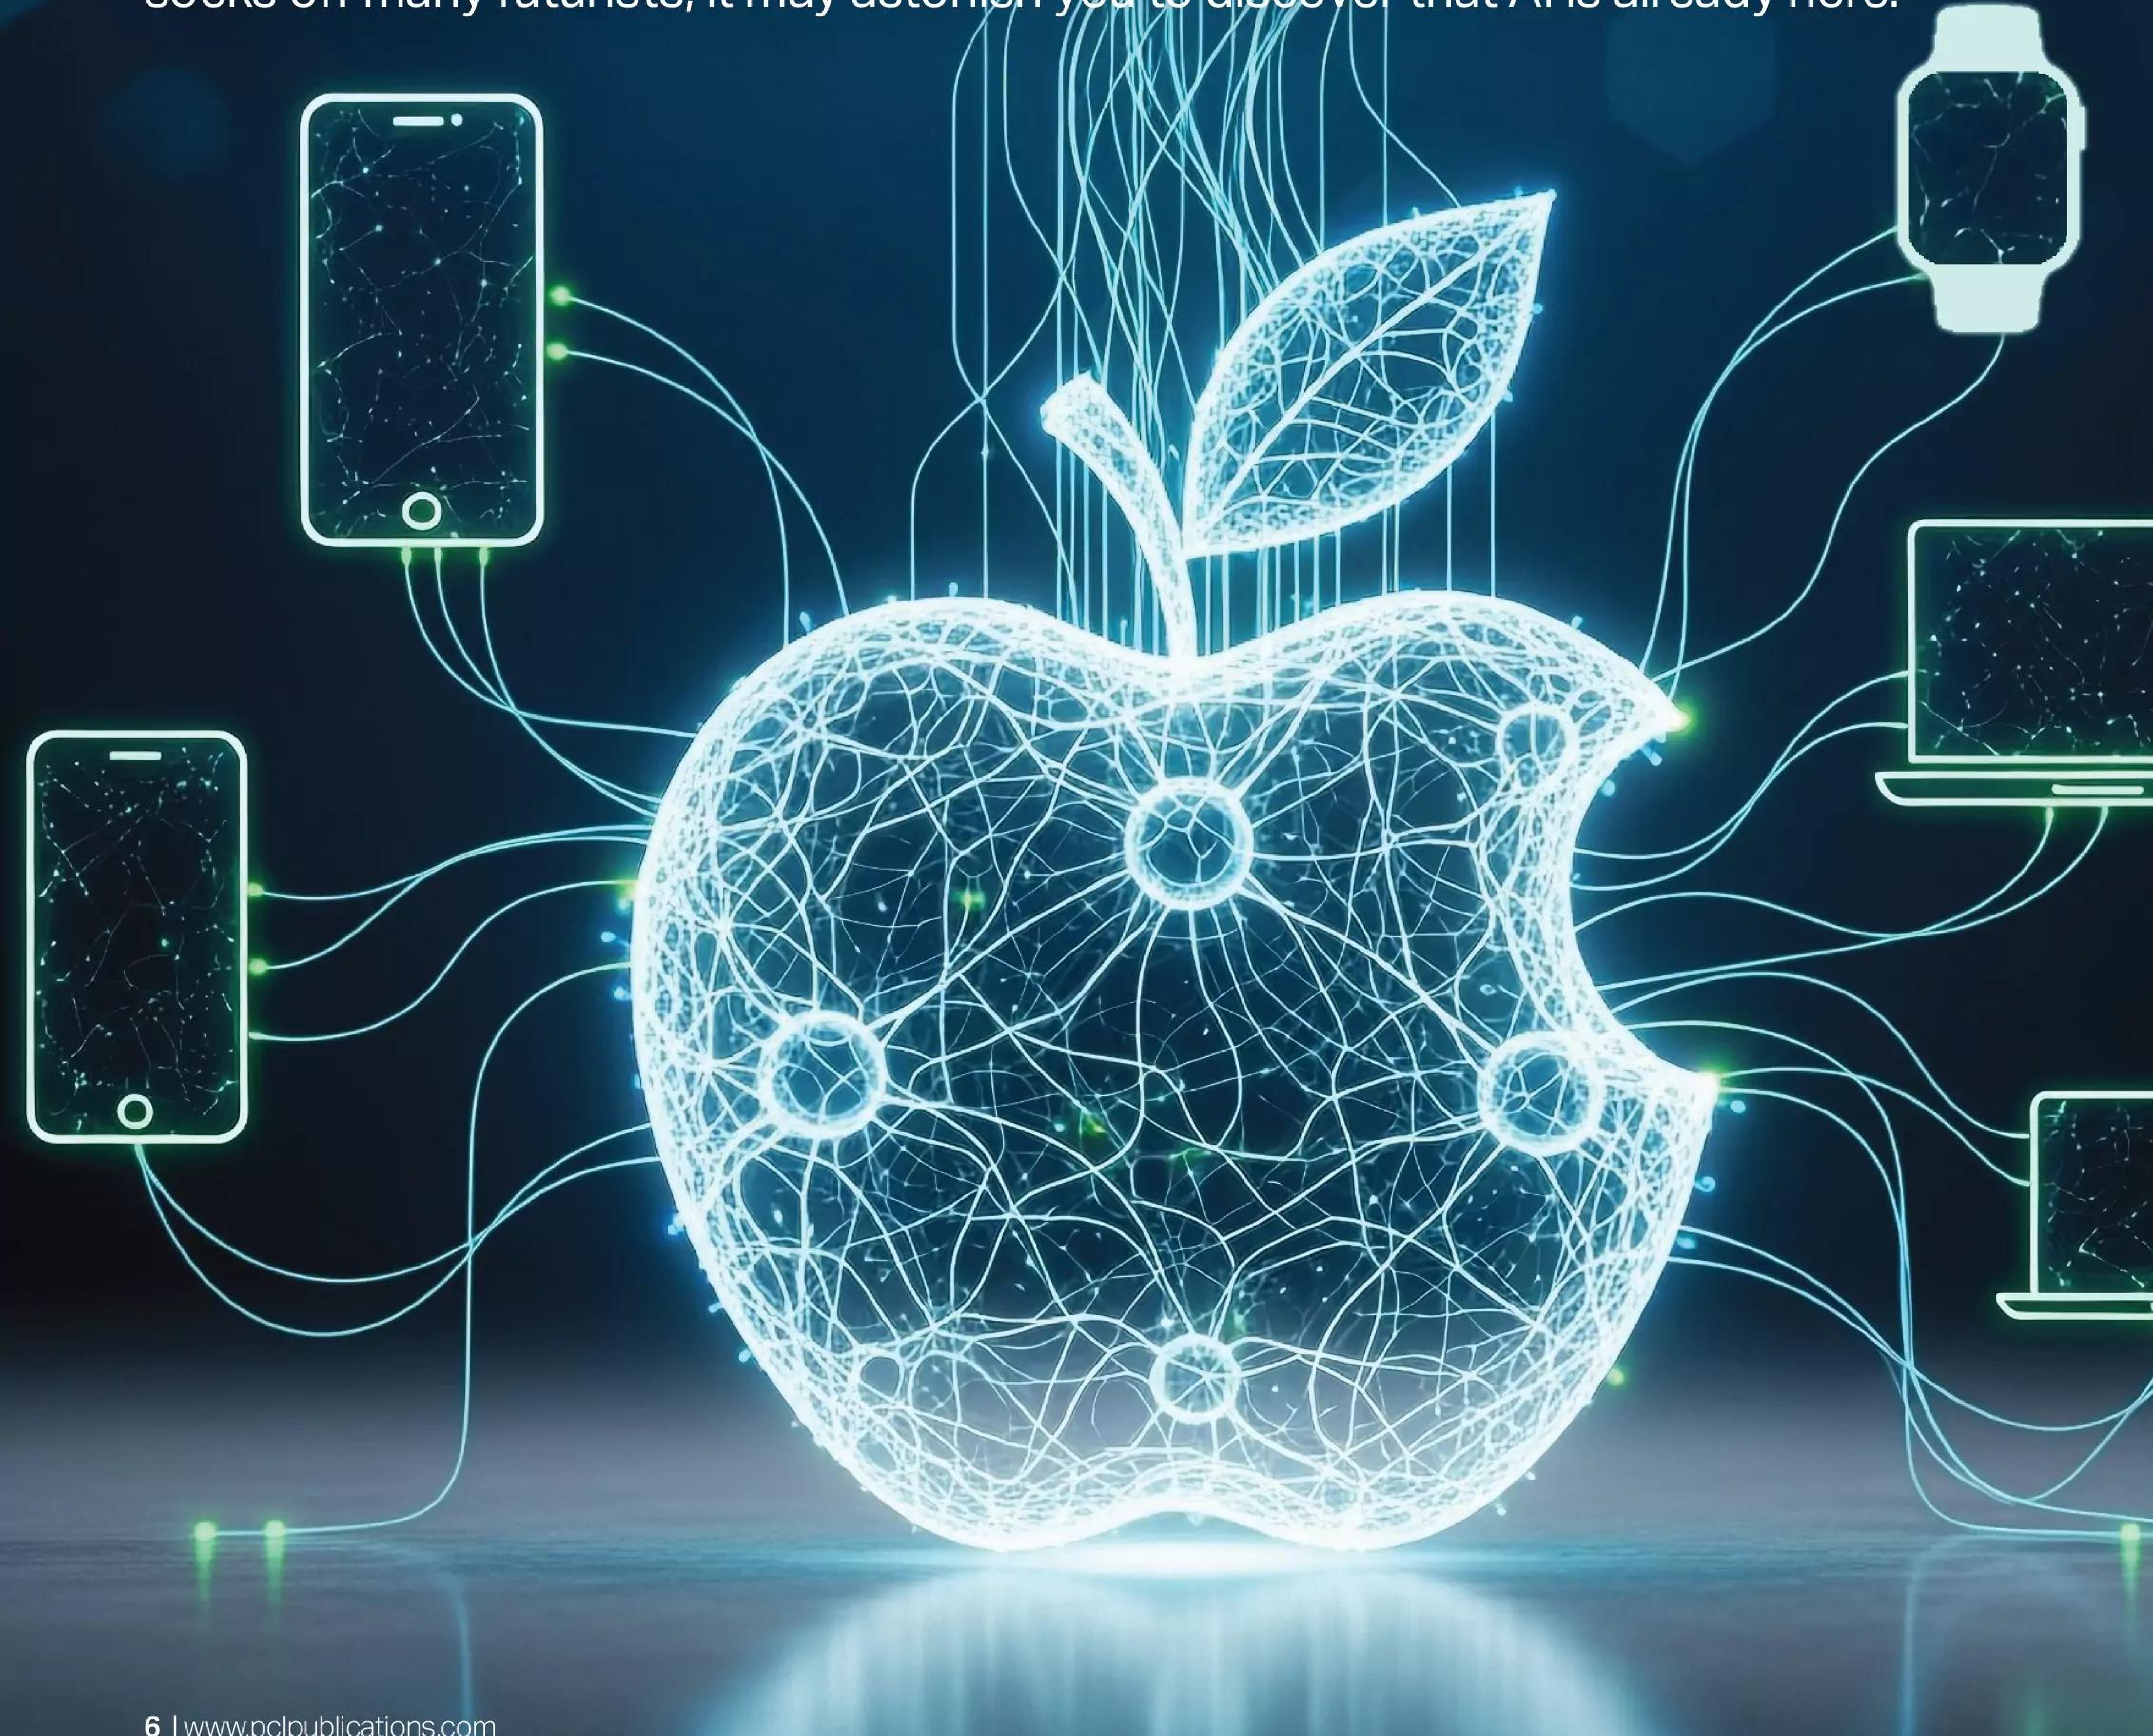
10 New in Apple Intelligence

What is Artificial Intelligence? And Is It Safe?

Apple's new suite of AI apps, tools and features, known as Apple Intelligence, has evolved significantly since it's launch. Where once it was perceived as something we'd probably only achieve in the next hundred years or so, it's now believed that true AI is, in all likelihood, just a few years away. And despite that scaring the socks off many futurists, it may astonish you to discover that AI is already here.



If you're able, pick up your phone, activate it, and ask either Siri or the Google Assistant a simple question. Now ask it a more complicated question. You've just talked to an AI system designed to listen out for your voice, analyse what's being asked and respond to it in an appropriate fashion. Significantly, it also learns from what's being asked.

The Google Assistant, Siri, Cortana, Alexa, and whatever else is available now, are all cloud-based natural language intelligent bots that use the complex computing capabilities of the cloud to provide a personalised consumer experience.

There are two sides to the AI coin: the intelligence side that, when asked something, knows what to do or can work out what needs to be done, and the learning side, that will actively retain knowledge and learn from each interaction with you. Both of these aspects are inherent to every intelligence bot, regardless of on which system they work. But AI is not limited to just chatbots who interface with you.

The learning machine

Consider any search you conduct via the Internet or some form of database. Regardless of whether it's a search for artists on Spotify, the latest fashion from the website of a high street store, or electrical goods from Amazon, each search employs a level of AI to help form the results. Machine learning is also employed to predict further what you might require, and present advertising for products in which you may be interested based on your past views and searches.

Facebook and YouTube are at the forefront of this type of AI, a search in YouTube for Christmas adverts from the '80s, brings up suggestions for past episodes of popular TV programs from the '70s and '80s. While random searches through a friend's timeline can result in Facebook displaying a list of potential friends, or even products, that your friends have looked up via the Facebook Marketplace.

It's all about using data analytics to create a prediction profile for a user. Whether that customer uses a set of recurring websites, buys the same products from the supermarket, or watches the same content day in and day out. AI can build a profile of that customer, then target other sites, products, music, videos and so on that's not too dissimilar from what they're used to consuming. Occasionally, the AI spits out something new that's outside of the user's regular requests, to gauge how the user responds. A positive response builds on the profile and leads to more areas of advertising and suggestion, whereas a negative response forces the AI to rethink and perhaps include something else further down the line.

Cloud AI

The problem for companies who sell products, or monitor customers, is that the data sets created by billions of users worldwide are simply too large to manage. This is where the cloud comes in. Thanks to the data-intensive workloads a cloud service can handle, it's relatively easy for a company to design an AI report on its userbase, as combining the programming of the AI with the power of the cloud will enable the vast volume of information to become readable.

In fact, the global AI market is expected to grow to over $200 billion by 2026, making it one of the fastest-growing markets in the world.

Integrating AI into such a workflow is a challenge, but, with such growth, it's quickly becoming a market that appeals to programmers for offering better and more accurate AI solutions for companies.

It's not all bad

Considering AI in light of gathering consumer data, it does come across somewhat ominous; like an all-seeing eye pervading everything we do, buy, look at, or interact with. Nevertheless, AI does help simplify a lot of tasks that would have taken months for a team of people to sift through.

Many of these AI projects include environmental issues, science and technology, engineering, education, and manufacturing. AI doesn't just worm its way into our lives and peep at our every move; it's also involved in helping to further technology and create a better environment.

Remember, these tools are your servant, not your master - they won't take over like artificial intelligences do in science fiction movies, and are definitely nothing to fear.

Inside Apple Intelligence

Apple's own artificial intelligence features are changing the way we use our Apple devices, from Mac, iPad, Vision Pro to iPhone.

Apple's much-talked-about artificial intelligence features, collectively known as Apple Intelligence, were launched on October 28th, 2024, for iOS, macOS, and iPadOS. But what is Apple Intelligence, and what can it do for you?

It's a range of tools integrated into Apple's operating system. Systems to help you get the most out of your Apple devices. They won't take over like artificial intelligence systems often do in science fiction movies. And as it's from Apple, your privacy is taken care of. Most Apple Intelligence computations are carried out on your hardware, and where the service needs to communicate over the Internet with outside servers, it does so very carefully.

But what can it do? Apple Intelligence helps you get more from your Apple device. When you're writing – in the Notes or Pages apps, emails, and almost everywhere else you can write – the Writing Tools feature can help. It can summarise your writing, make it friendlier or more businesslike, and more. If you can't find the right emoji (small illustrations, like smiley faces) to use, ask for a new one and Apple Intelligence builds it for you. It also helps you touch up photos, create new images and power some great new Siri features.

Over the pages of this publication, we show you how to do all these things and more.

ARCH 201 Lecture 12

ARCHITECTURE IN INDIA
15th – 18th centuries

CHHATRI

- Small open pavilions, often with dome-shaped canopies
- Typically more decorative than functional
- Wide variation in materials used; ornamentation ranging from simple to highly complex
- Sometimes standalone but often added to the rooftops of buildings
- First example dates back to 12th century

s period saw the rise of another feature associated with Mughal architecture: The chhajja, an
hing that extends away from buildings and is supported on beams. We see a great deal of

New in Apple Intelligence

Apple's artificial intelligence tools go from strength to strength.

The new 2025 generation of Apple operating systems offer more than a great new style. There's also new Apple Intelligence features that elevate the user experience across iPhone, iPad, Mac, Apple Watch and Apple Vision Pro. Apple Intelligence unlocks new ways for users to communicate with features like Live Translation, do more with what's on their screen with updates to visual intelligence, and express themselves with more enhancements to Image Playground, Genmoji and Photos.

Additionally, Shortcuts can now tap into Apple Intelligence directly, and developers can access the on-device large language model at the core of Apple Intelligence, giving them direct access to intelligence that is powerful, fast, built with privacy and available even when users are offline. These Apple Intelligence features will be available to users with supported devices set to a supported language.

Apple Intelligence features is coming to eight more languages. These are Danish, Dutch, Norwegian, Portuguese (Portugal), Swedish, Turkish, Chinese (traditional) and Vietnamese with more to be rolled out at later dates.

Translation on the go

For those moments when a language barrier gets in the way, Live Translation can help users communicate across languages when messaging or speaking. The experience is integrated into Messages, FaceTime and Phone, and enabled by Apple-built models that run

The new operating systems bring some great new Apple Intelligence features.

entirely on device, so user's personal conversations stay personal.

In Messages, Live Translation can automatically translate messages. If a user is making plans with new friends while traveling abroad, their message can be translated as they type, delivered in the recipient's preferred language, and when they get a response, each message can be instantly translated. On FaceTime calls, a user can follow along with translated live captions while still hearing the speaker's voice. And when on a phone call, the translation is spoken aloud throughout the conversation.

Art-ificial Intelligence

Genmoji and Image Playground provide users with even more ways to express themselves. In addition to turning a text description into a Genmoji, users can mix together emoji and combine them with descriptions to create something new. When users make images inspired by family and friends using Genmoji and Image Playground, they have the ability to change expressions or adjust personal attributes, like hairstyle, to match their friend's latest look.

In Image Playground, users can tap into brand-new styles with ChatGPT, like an oil painting style or vector art. For moments when users have a specific idea in mind, they can tap Any Style and describe what they want. Image Playground sends a user's description or photo to ChatGPT and creates a unique image. Users are always in control, and nothing is shared with ChatGPT without their permission.

Visual intelligence

Building on Apple Intelligence, visual intelligence extends to a user's iPhone screen so they can search and take action on anything they're viewing across their apps.

Visual intelligence already helps users learn about objects and places around them using their iPhone's camera, and it now lets you do more, faster, with the content on your iPhone screen. You can ask ChatGPT questions about what you're looking at, as well as search Google, Etsy or other supported

Can't wait to meet this legend

Hi, are you available to cater a wedding on December 6?

+49 160 95620427

Ah ja. Ich wurde mich sehr freuen, Ihnen zu helfen.

Ah yes. I would be very happy to help you.

Apple Intelligence is to bring Live Translation to FaceTime calls, Messages and phone calls.

apps to find similar images and products. If there's an object you're especially interested in, like a lamp, you can highlight it to search for that specific item or similar objects online.

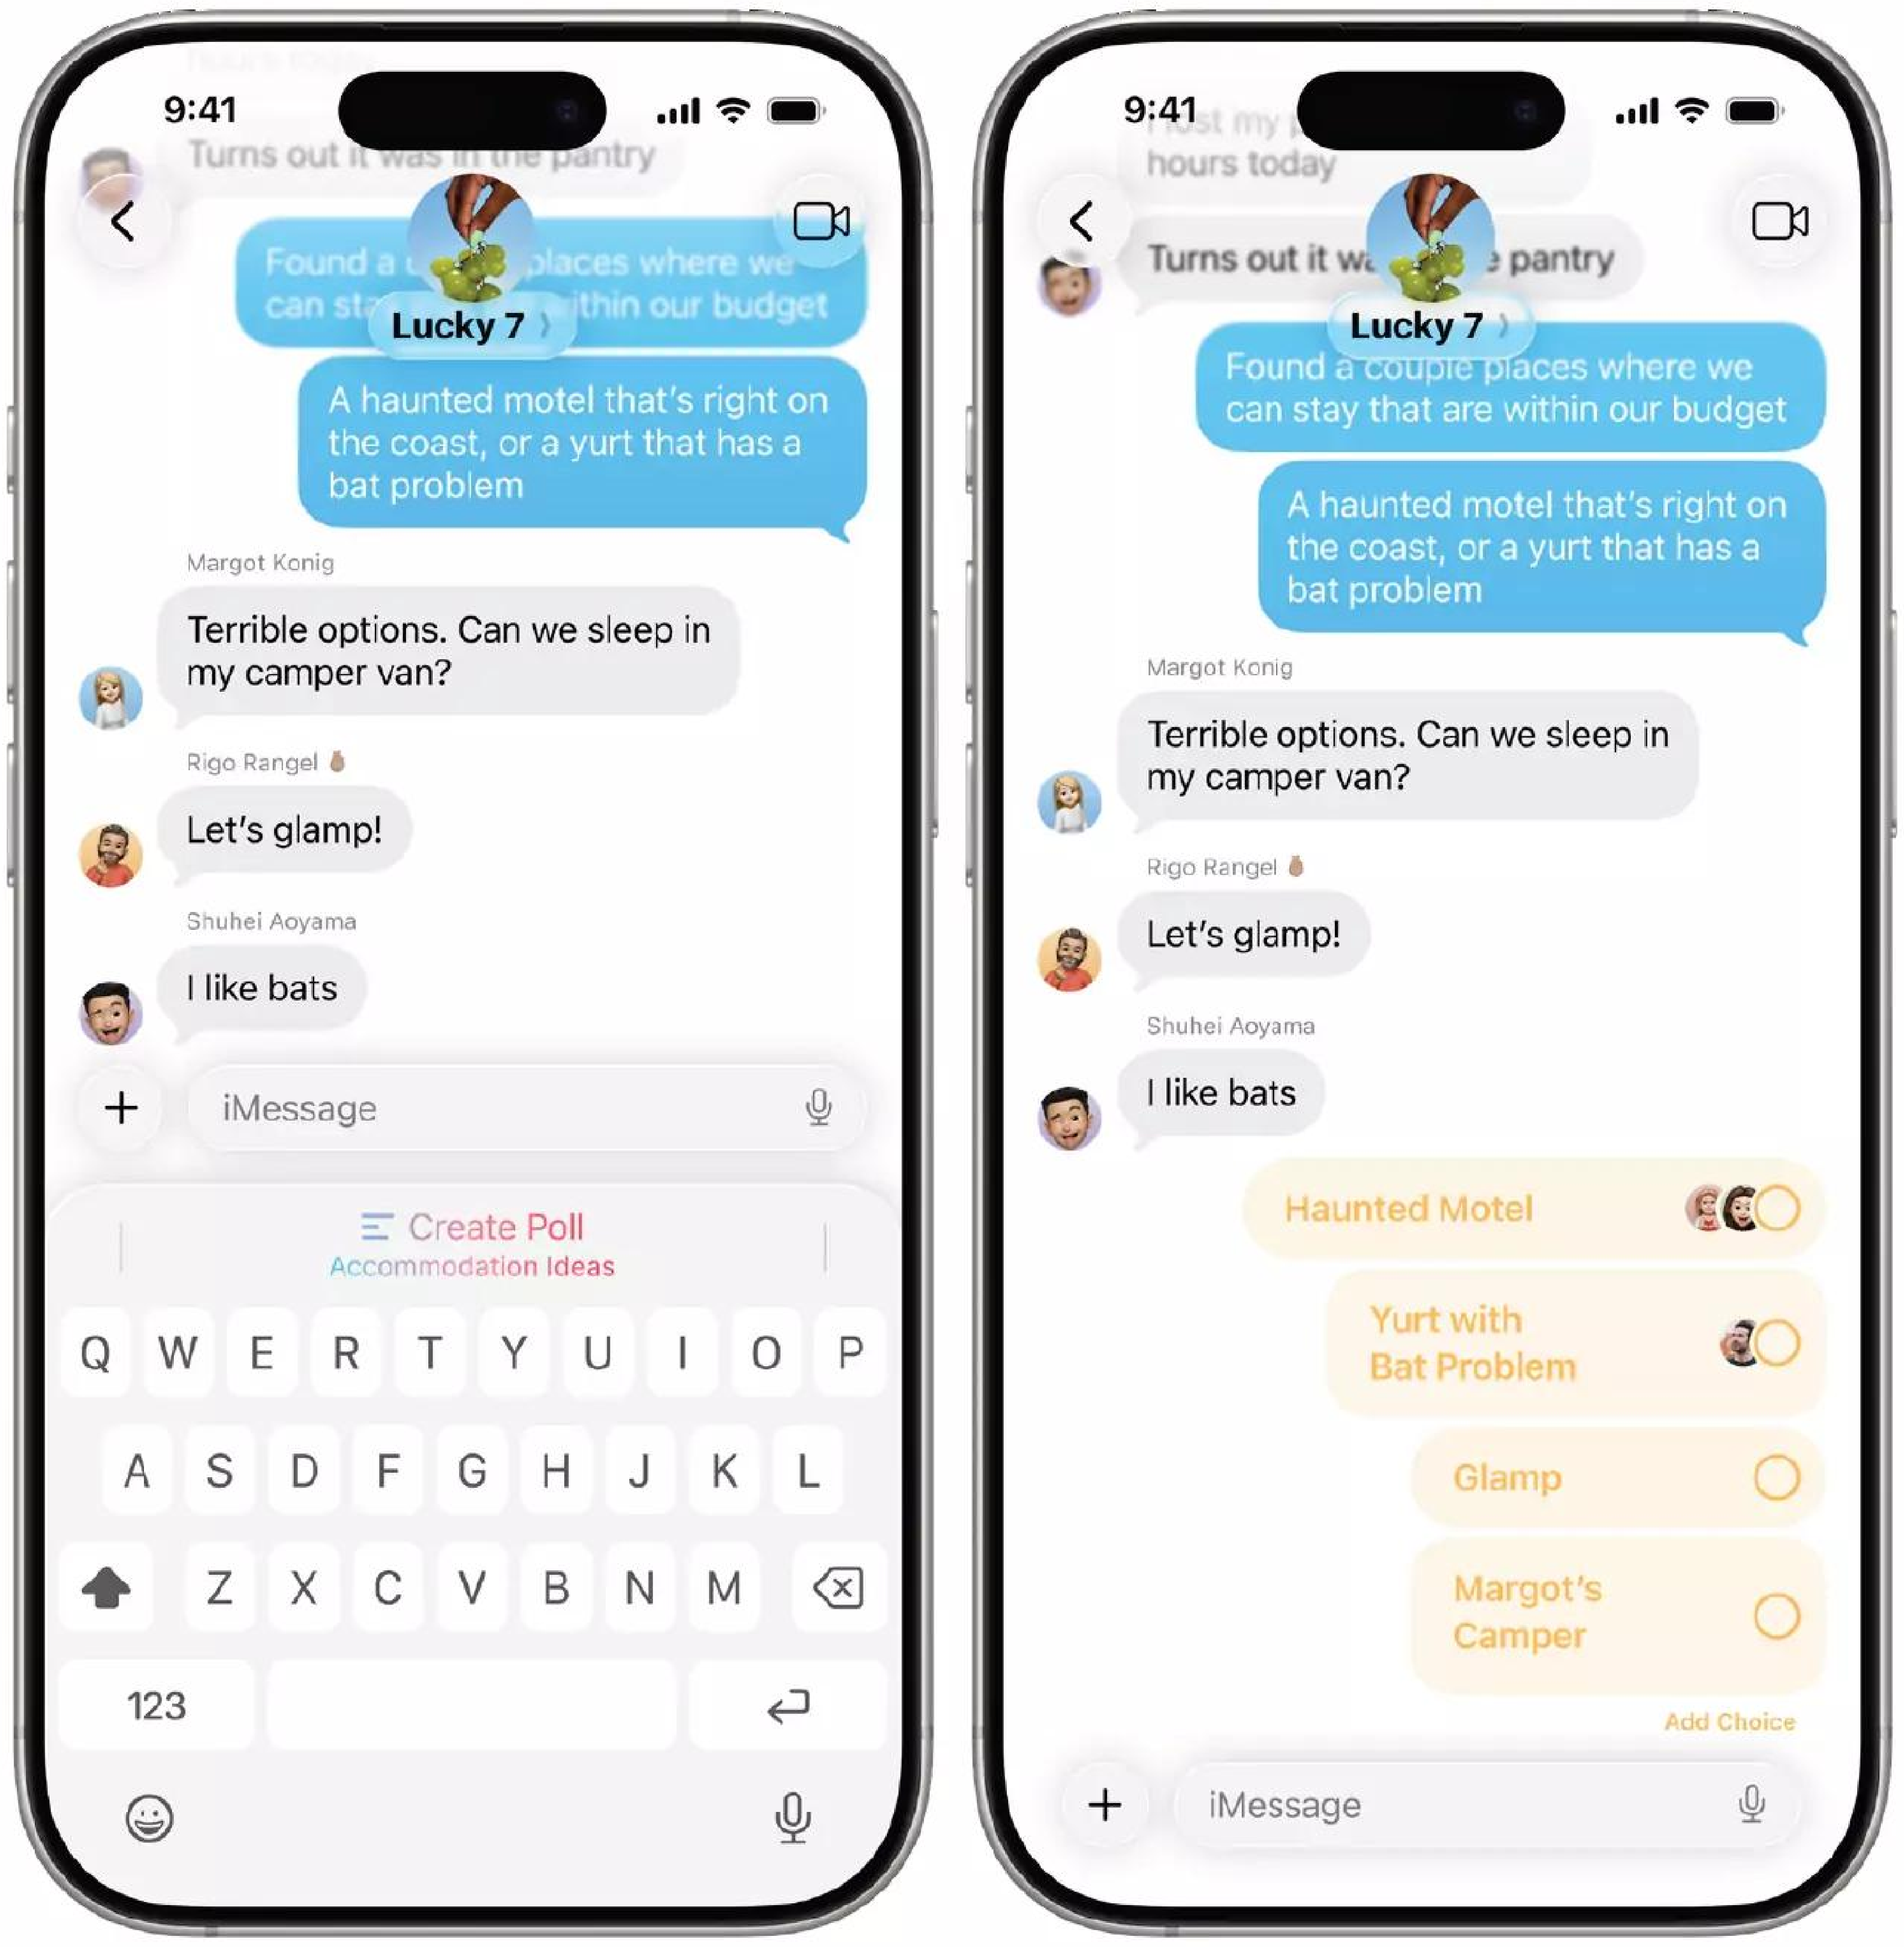
Visual intelligence also recognizes when you're looking at an event and suggests adding it to your calendar. Apple Intelligence then extracts the date, time, and location to prepopulate these key details into an event.

You can access visual intelligence for what's on their screen by simply pressing the same buttons used to take a screenshot. You have the choice to save or share your screenshot, or explore more with visual intelligence.

Watching it

Workout Buddy is a new workout experience on Apple Watch with Apple Intelligence that incorporates your workout data and fitness history to generate personalised, motivational insights during your session.

To offer meaningful inspiration in real time, Workout Buddy analyses data from your current workout along with your fitness history, based on data like heart rate, pace, distance, Activity rings, personal fitness milestones and more. A new text-to-speech model then translates insights into a dynamic generative voice built using voice data from Fitness+



A haunted motel that's right on the coast, or a yurt that has a bat problem

Margot Konig: Terrible options. Can we sleep in my camper van?

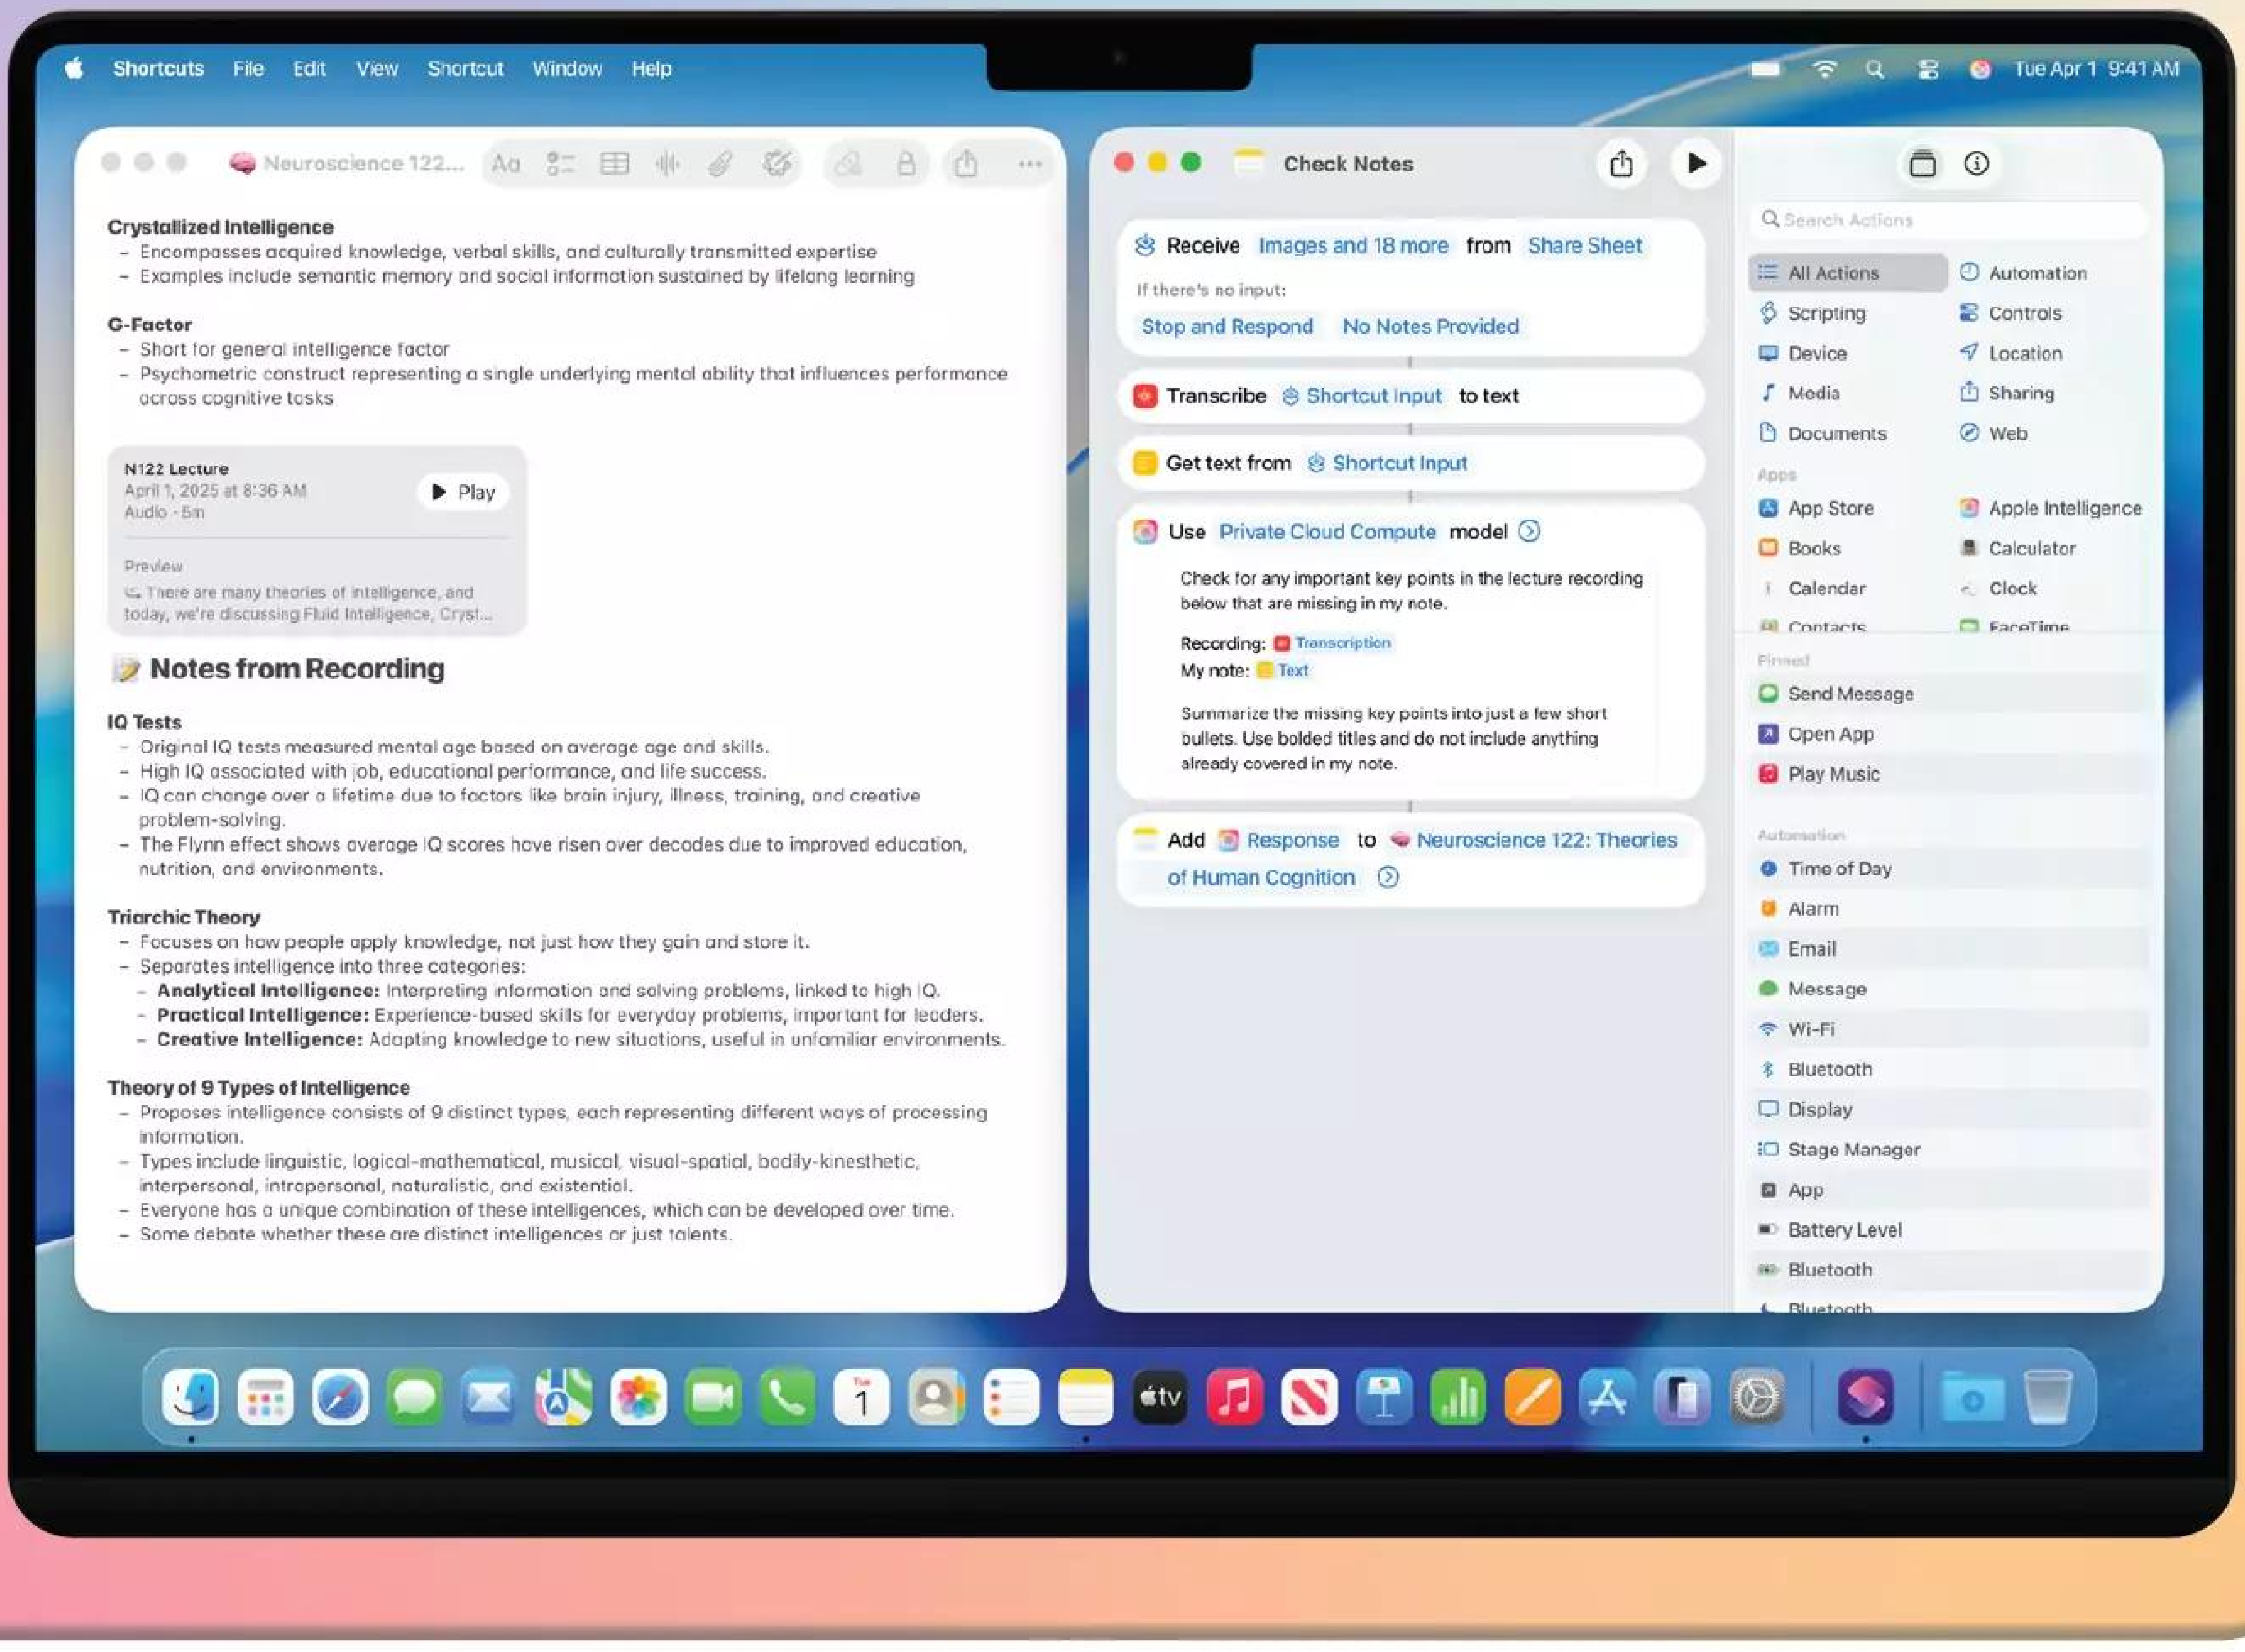
Thanks to Apple Intelligence, in group chats the Messages app detects when a poll might be useful and offers one as a suggestion. Which way will you vote?

> "Last year, we took the first steps on a journey to bring users intelligence that's helpful, relevant, easy to use and right where users need it, all while protecting their privacy. Now, the models that power Apple Intelligence are becoming more capable and efficient, and we're integrating features in even more places across each of our operating systems," said Craig Federighi, Apple's senior vice president of Software Engineering. "We're also taking the huge step of giving developers direct access to the on-device foundation model powering Apple Intelligence, allowing them to tap into intelligence that's powerful, fast, built with privacy and available even when users are offline. We think this will ignite a whole new wave of intelligent experiences in the apps users rely on every day. We can't wait to see what developers create."

Shortcuts get more intelligent

Shortcuts are now more powerful and intelligent than ever. You can tap into intelligent actions, a whole new set of shortcuts enabled by Apple Intelligence. You see dedicated actions for features like summarising text with Writing Tools or creating images with Image Playground.

You can tap directly into Apple Intelligence models, either on-device or with Private Cloud Compute, to generate responses that feed into the rest of your shortcut, maintaining the privacy of information used in the shortcut. For example, a student can build a shortcut that uses the Apple Intelligence model to compare an audio transcription of a class lecture to the notes they took, and add any key points they may have missed. Users can also choose to tap into ChatGPT to provide responses that feed into their shortcut.



Crystallized Intelligence
- Encompasses acquired knowledge, verbal skills, and culturally transmitted expertise
- Examples include semantic memory and social information sustained by lifelong learning

G-Factor
- Short for general intelligence factor
- Psychometric construct representing a single underlying mental ability that influences performance across cognitive tasks

There are many theories of intelligence, and today, we're discussing Fluid Intelligence, Cryst...

Notes from Recording

IQ Tests
- Original IQ tests measured mental age based on average age and skills.
- High IQ associated with job, educational performance, and life success.
- IQ can change over a lifetime due to factors like brain injury, illness, training, and creative problem-solving.
- The Flynn effect shows average IQ scores have risen over decades due to improved education, nutrition, and environments.

Triarchic Theory
- Focuses on how people apply knowledge, not just how they gain and store it.
- Separates intelligence into three categories:
  - **Analytical Intelligence:** Interpreting information and solving problems, linked to high IQ.
  - **Practical Intelligence:** Experience-based skills for everyday problems, important for leaders.
  - **Creative Intelligence:** Adapting knowledge to new situations, useful in unfamiliar environments.

Theory of 9 Types of Intelligence
- Proposes intelligence consists of 9 distinct types, each representing different ways of processing information.
- Types include linguistic, logical-mathematical, musical, visual-spatial, bodily-kinesthetic, interpersonal, intrapersonal, naturalistic, and existential.
- Everyone has a unique combination of these intelligences, which can be developed over time.
- Some debate whether these are distinct intelligences or just talents.

trainers, so it has the right energy, style and tone for a workout. Workout Buddy processes this data privately and securely with Apple Intelligence.

Workout Buddy has come to Apple Watch with Bluetooth headphones, and requires an Apple Intelligence-supported iPhone nearby. It's available starting in English, across some of the most popular workout types: Outdoor and Indoor Run, Outdoor and Indoor Walk, Outdoor Cycle, HIIT along with Functional and Traditional Strength Training.

For developers

Apple is opening up access for any app to tap directly into the on-device foundation model at the core of Apple Intelligence. With the Foundation Models framework, app developers can build on Apple Intelligence to bring users new experiences that are intelligent, available when they're offline, and that protect their privacy, using AI inference that is free of cost. For example, an education app can use the on-device model to generate a personalised quiz from a user's notes, without any cloud API costs, or an outdoors app can add natural language search capabilities that work even when the user is offline.

The framework has native support for Apple's Swift language, so app developers can easily access the Apple Intelligence model with as few as three lines of code. Guided generation, tool calling and more are all built into the framework, making it easier than ever to implement generative capabilities right into a developer's existing app.

And there's more...

In the next set of Apple operating systems, Apple Intelligence is even more deeply integrated into the apps and experiences that you rely on every day. The most relevant actions in an email, website, note, or other content can be identified and automatically categorised in Reminders.

Apple Wallet can identify and summarise order tracking details from emails sent from merchants or delivery carriers. This works across all your orders, giving you the ability to see full order details, progress notifications and more, all in one place.

You can create a poll for anything in Messages, and with Apple Intelligence, Messages can detect when a poll might come in handy and suggest one. In addition, Backgrounds in the Messages app lets you personalise your chats with stunning designs, and you can create unique backgrounds that fit your conversation with Image Playground.

On the Way

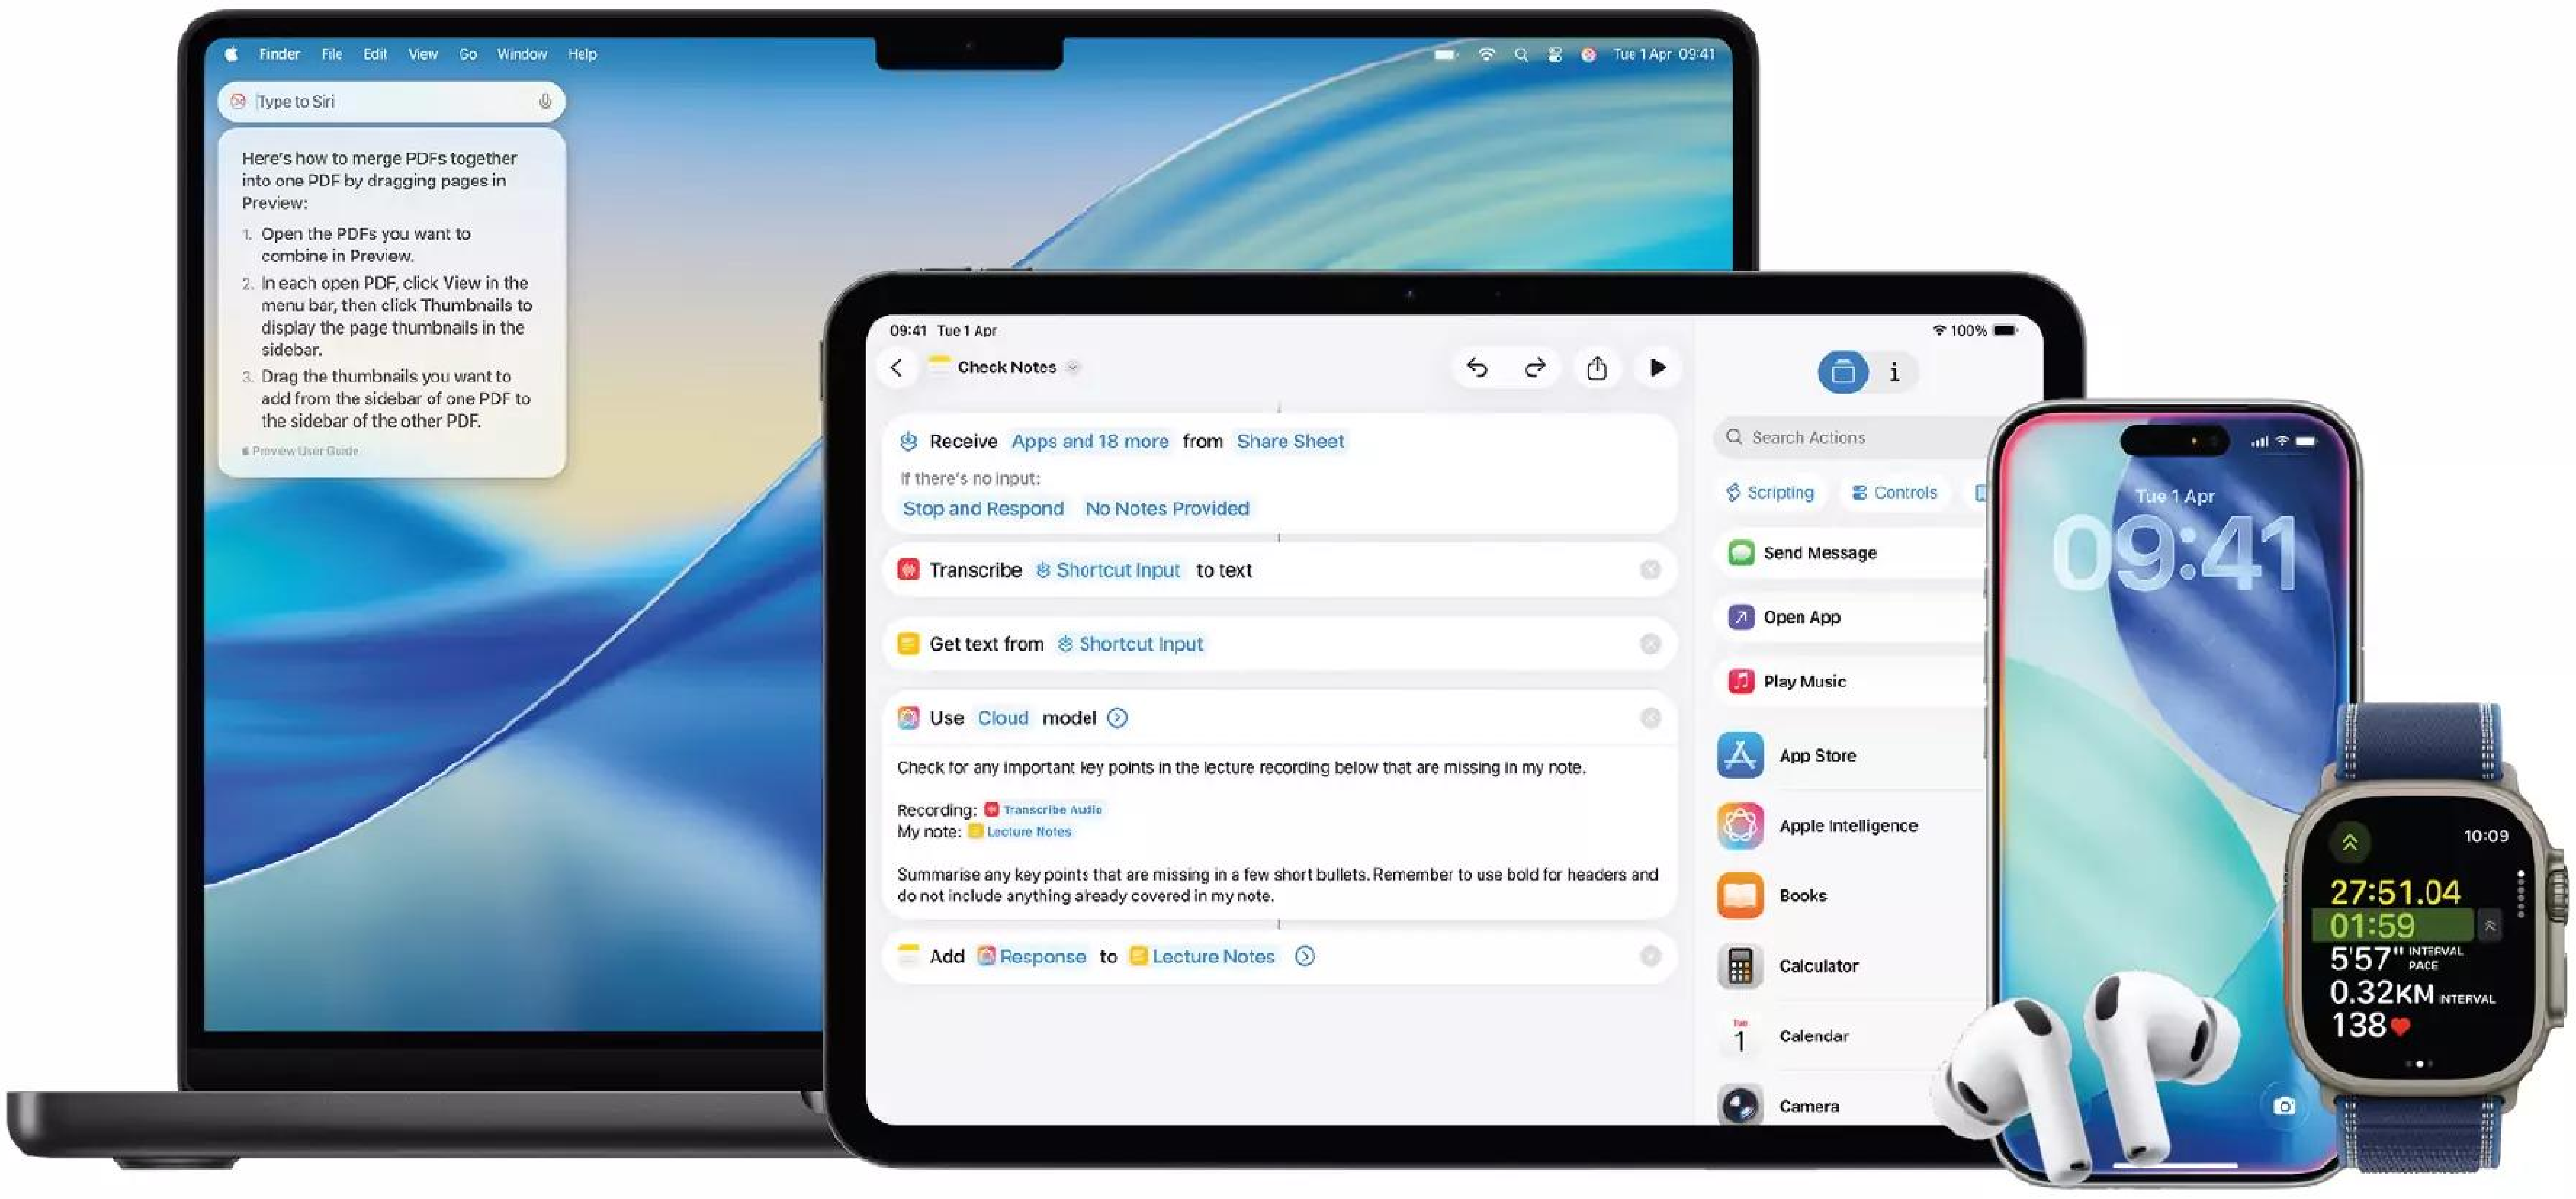
"Apple's services are integral to many parts of a user's day, and we're excited to bring features that pack even more power and fun into their everyday moments," said Eddy Cue, Apple's senior vice president of Services. "These updates will help users better navigate and explore the world around them with Apple Maps, offer an enhanced Apple Music experience, elevate how they shop with Apple Pay and Apple Wallet, and so much more."



Updates to Visual Intelligence

The Apple Intelligence-powered Visual Intelligence feature is now even more powerful, and can bring you even more information about what's found in a photo or screenshot. If you see something you like the look of, take a photo of it, or if it's in a picture or video on your iPhone, take a screenshot. You can then use Visual Intelligence to find similar objects on sites such as eBay, Poshmark, Etsy, and more. Or you could simply search for it using Google. You can also ask about the subject in question using ChatGPT.

Visual intelligence can also summarise and translate text, as well as add an event from a flyer on your iPhone screen to your calendar. Read our full tutorial on page 62.

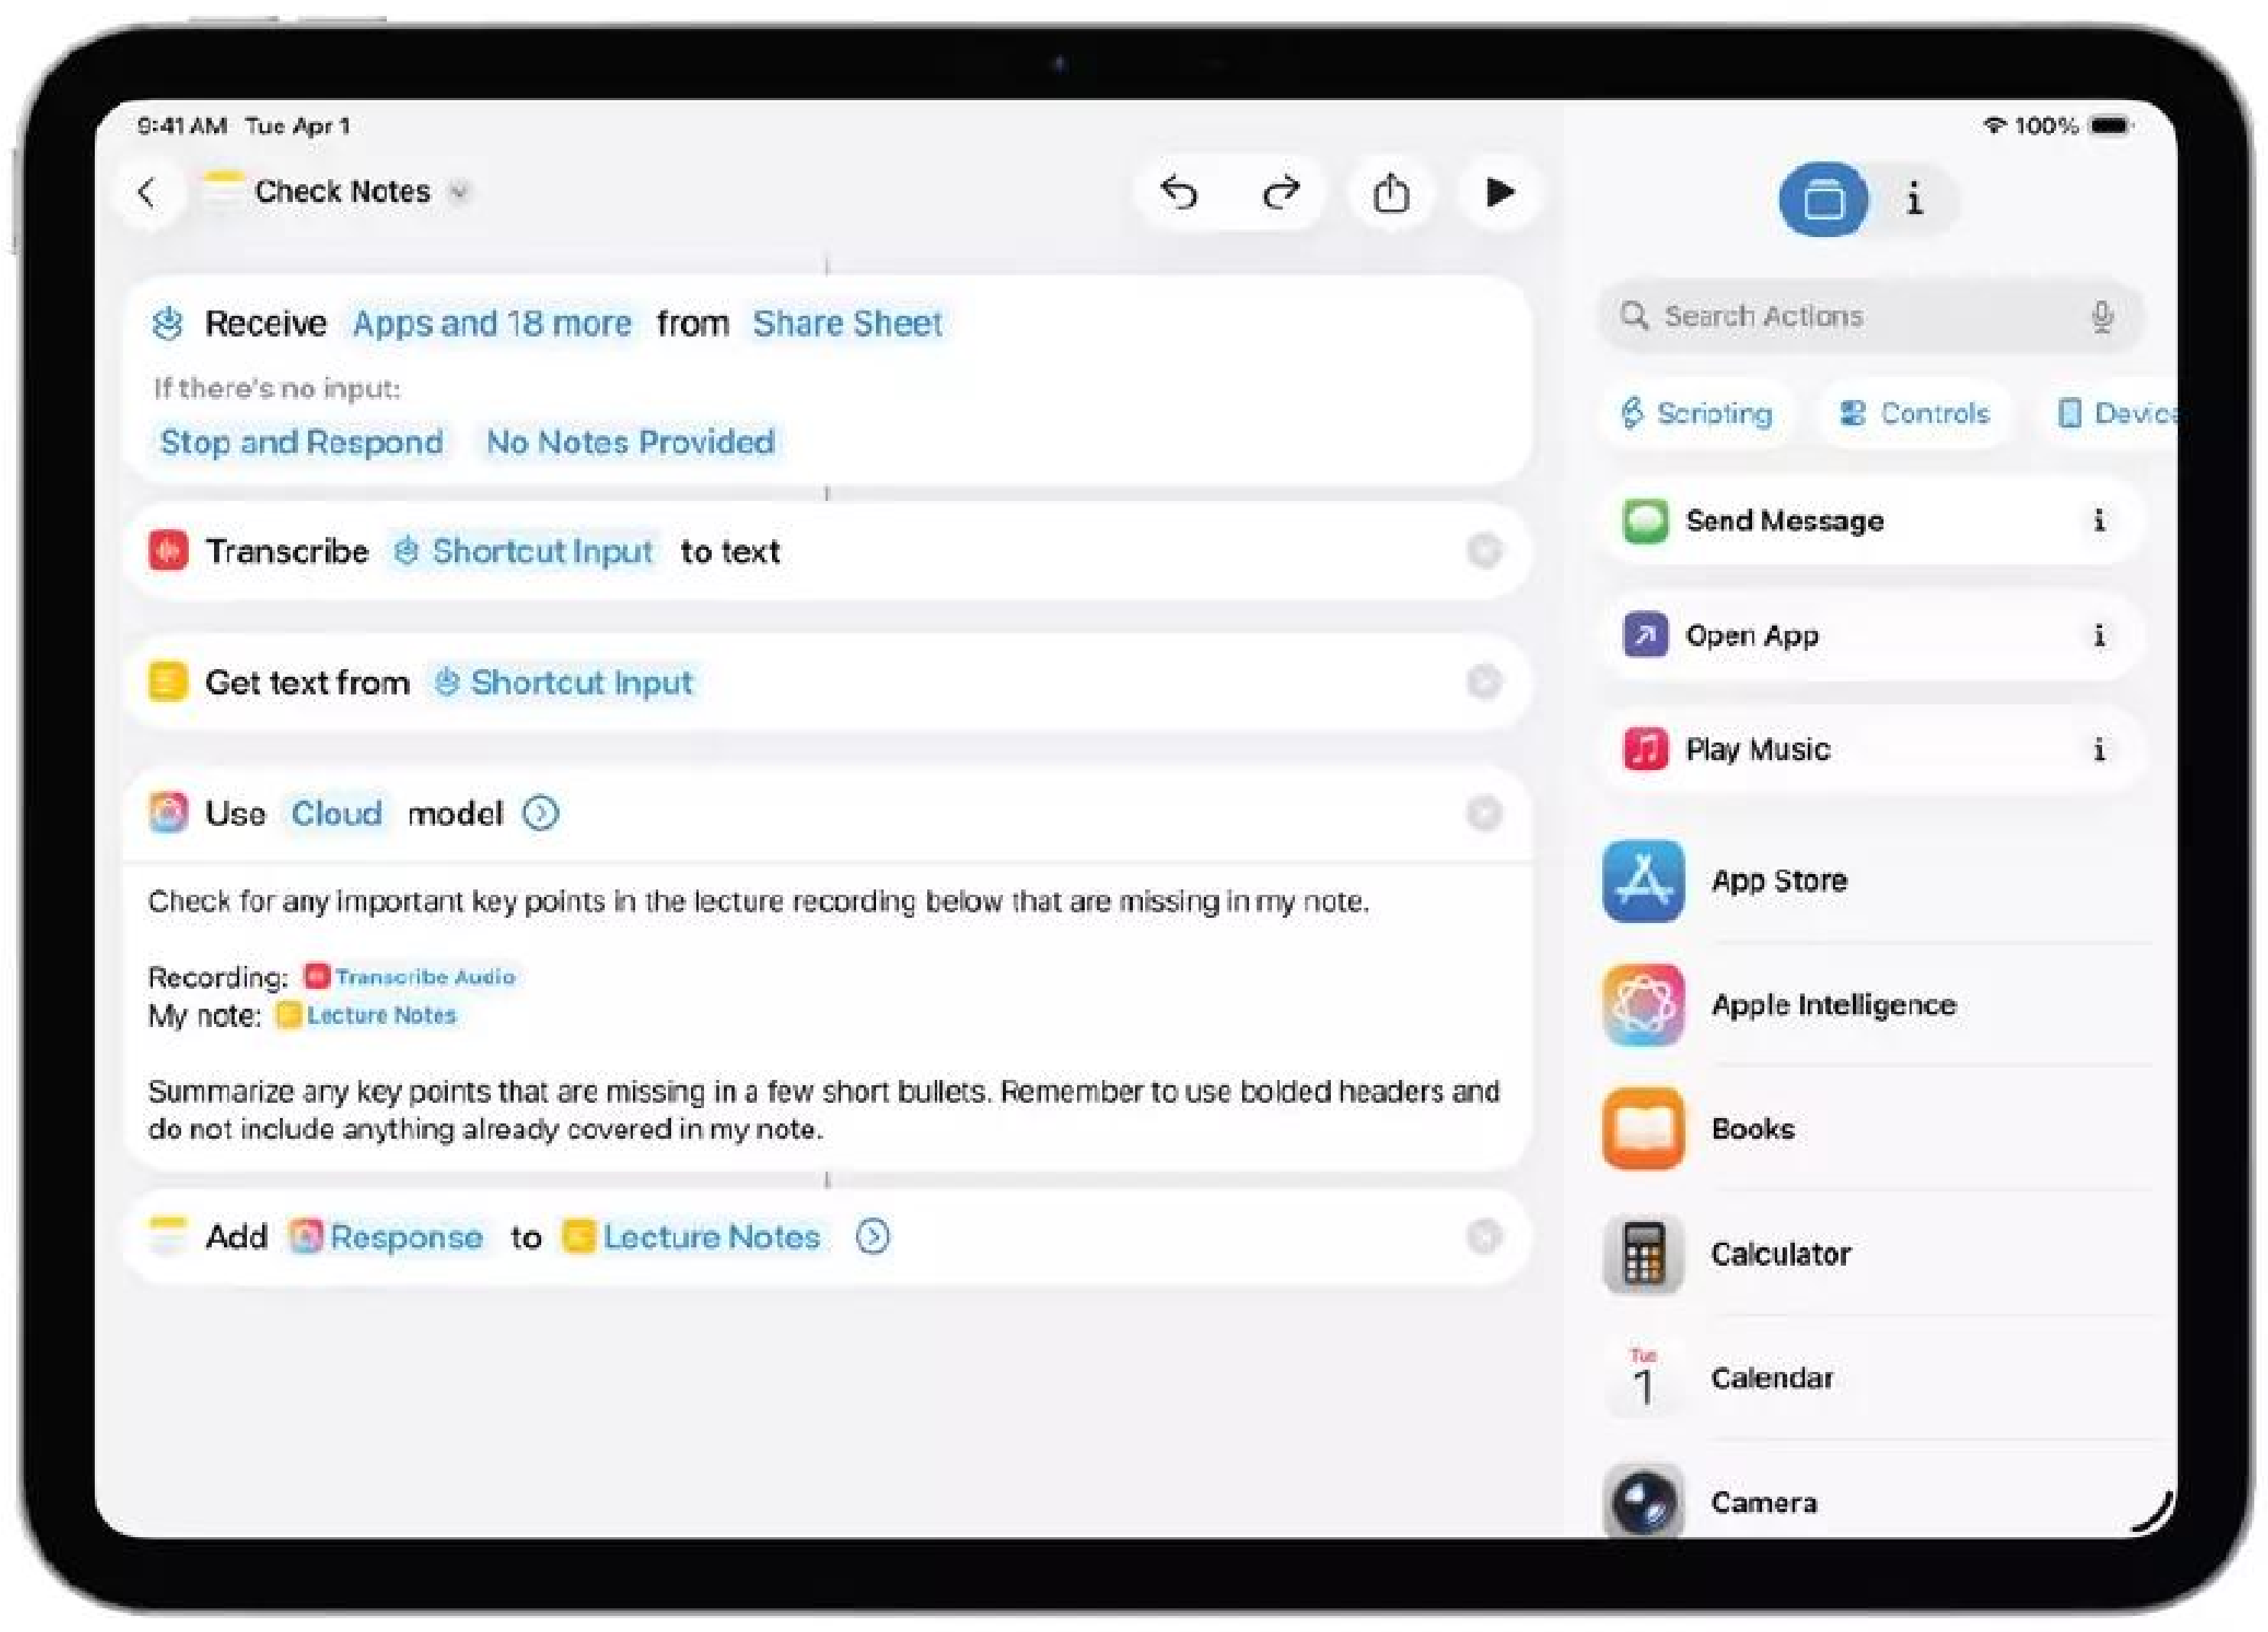
Build Intelligent Shortcuts

Shortcuts help users accomplish more faster, by combining multiple steps from their favourite apps into powerful, personal automations. And now with Apple Intelligence, you can take advantage of intelligent actions in the Shortcuts app to create automations, like summarising text with Writing Tools or creating images with Image Playground.

You can tap into Apple Intelligence models, either on device or with Private Cloud Compute, to generate responses that feed into the rest of your shortcut, maintaining your privacy. For example, users can create powerful Shortcuts like comparing an audio transcription to typed notes, summarising documents by their contents, extracting information from a PDF and adding key details to a spreadsheet and more.



Receive Apps and 18 more from Share Sheet

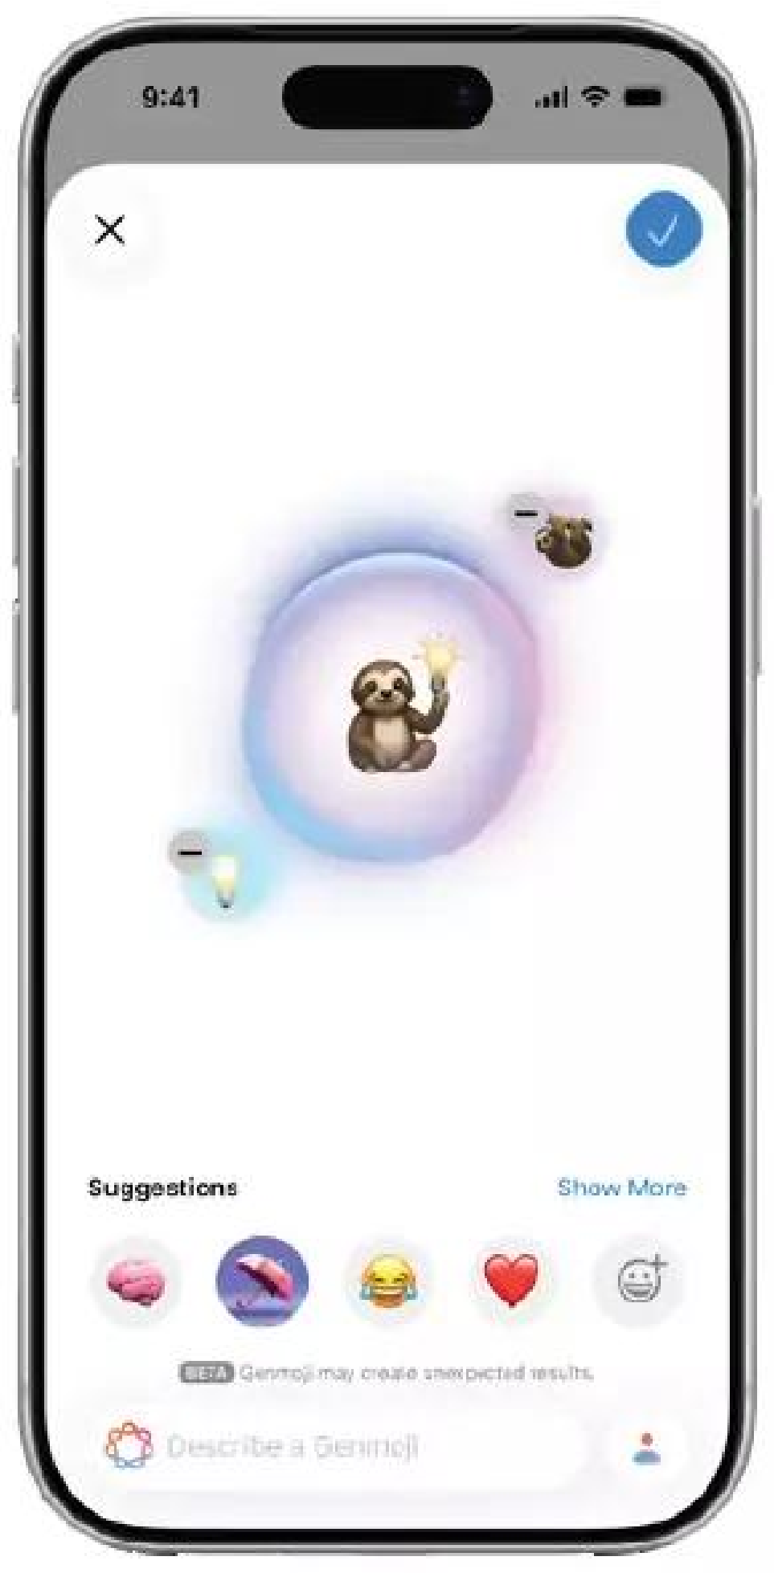
Add Response to Lecture Notes

Now you can build even more powerful Shortcuts by using the new Apple Intelligence-powered actions.

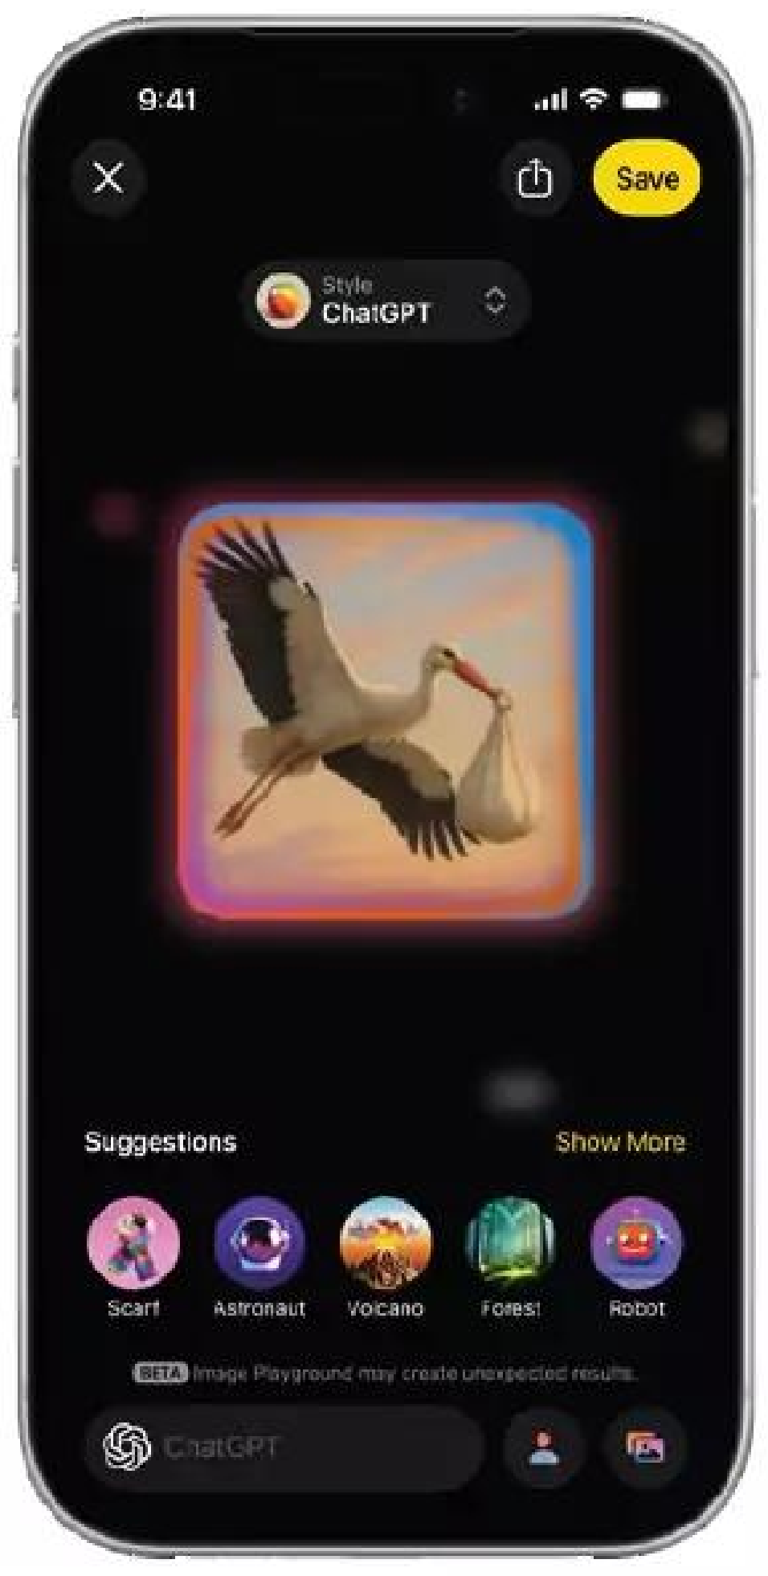
Enhancements to Genmoji and Image Playground

Genmoji, which lets you generate your own emoji using Apple Intelligence, and Image Playground, the feature that lets you generate unique pictures, have both had a recent upgrade. You can create new Genmoji by mixing emojis together, and/or combining them with short descriptions. When making Genmoji or Image Playground images inspired by family and friends, you can change expressions or modify personal attributes like hairstyle or facial features to update or fine-tune the image and keep it right up to date.

In Image Playground, you can tap into ChatGPT to explore new styles like Watercolour and Oil Painting, along with an Any Style option that offers even more creative control. Image Playground sends your description or photo to ChatGPT, which creates a unique image for your calendar.



Mix existing emoji to create exciting new Genmoji!



New ChatGPT styles are now available in Image Playground.

Third-Party Apps

Apple has opened up access for any developer to tap into the on-device large language model at the core of Apple Intelligence, and many apps have already introduced new experiences to their own applications. For example, the Streaks app now intelligently suggests and automatically categorises tasks in a user's to-do list. CARROT Weather provides free, unlimited conversation around weather insights, all in the app's signature tone, and Detail: AI Video Editor helps creatives by generating teleprompter scripts from outlines or existing text.

These experiences are available offline and protect user privacy, using AI inference that is free of cost to developers. The framework is tightly integrated into Swift and leverages capabilities like guided generation to seamlessly incorporate the model's output into a developer's app.

And There's More...

A few extra Apple Intelligence-powered features have been added to your Apple gear.

- The most relevant actions in an email, website, note or other content can be identified and automatically categorised in Reminders.

- Apple Wallet can identify and summarise order tracking details from emails sent from merchants or delivery carriers. This works across all of your orders, so you can see your full order details, progress notifications and more, all in one place.

- You can create a poll for anything in Messages, and with Apple Intelligence, Messages can detect when a poll might come in handy and suggest one. In addition, Backgrounds in the Messages app lets you personalise your chats with stunning designs, and you can create unique backgrounds that fit your conversation with Image Playground.

Mac User Guide

Use Apple Intelligence on your Mac

With macOS Tahoe, Apple Intelligence* is integrated across your apps and experiences to help you communicate, express yourself and get things done more easily. It delivers intelligence that's useful and relevant to you, all while protecting your privacy.

Note: Apple Intelligence is not available on all Mac models or in all languages or regions. ** To access the most recent available features, make sure you're using the latest version of macOS.

Turn on Apple Intelligence

If Apple Intelligence is off, you can turn it on to access the latest features that it powers across macOS Tahoe. Go to the System Settings app, click Apple Intelligence & Siri, then do one of the following.

- Click the button next to Apple Intelligence.
- Click Turn on Apple Intelligence.

  The option you see is based on the version of macOS you have and if you've previously set up Apple Intelligence.

Reduce Interruptions

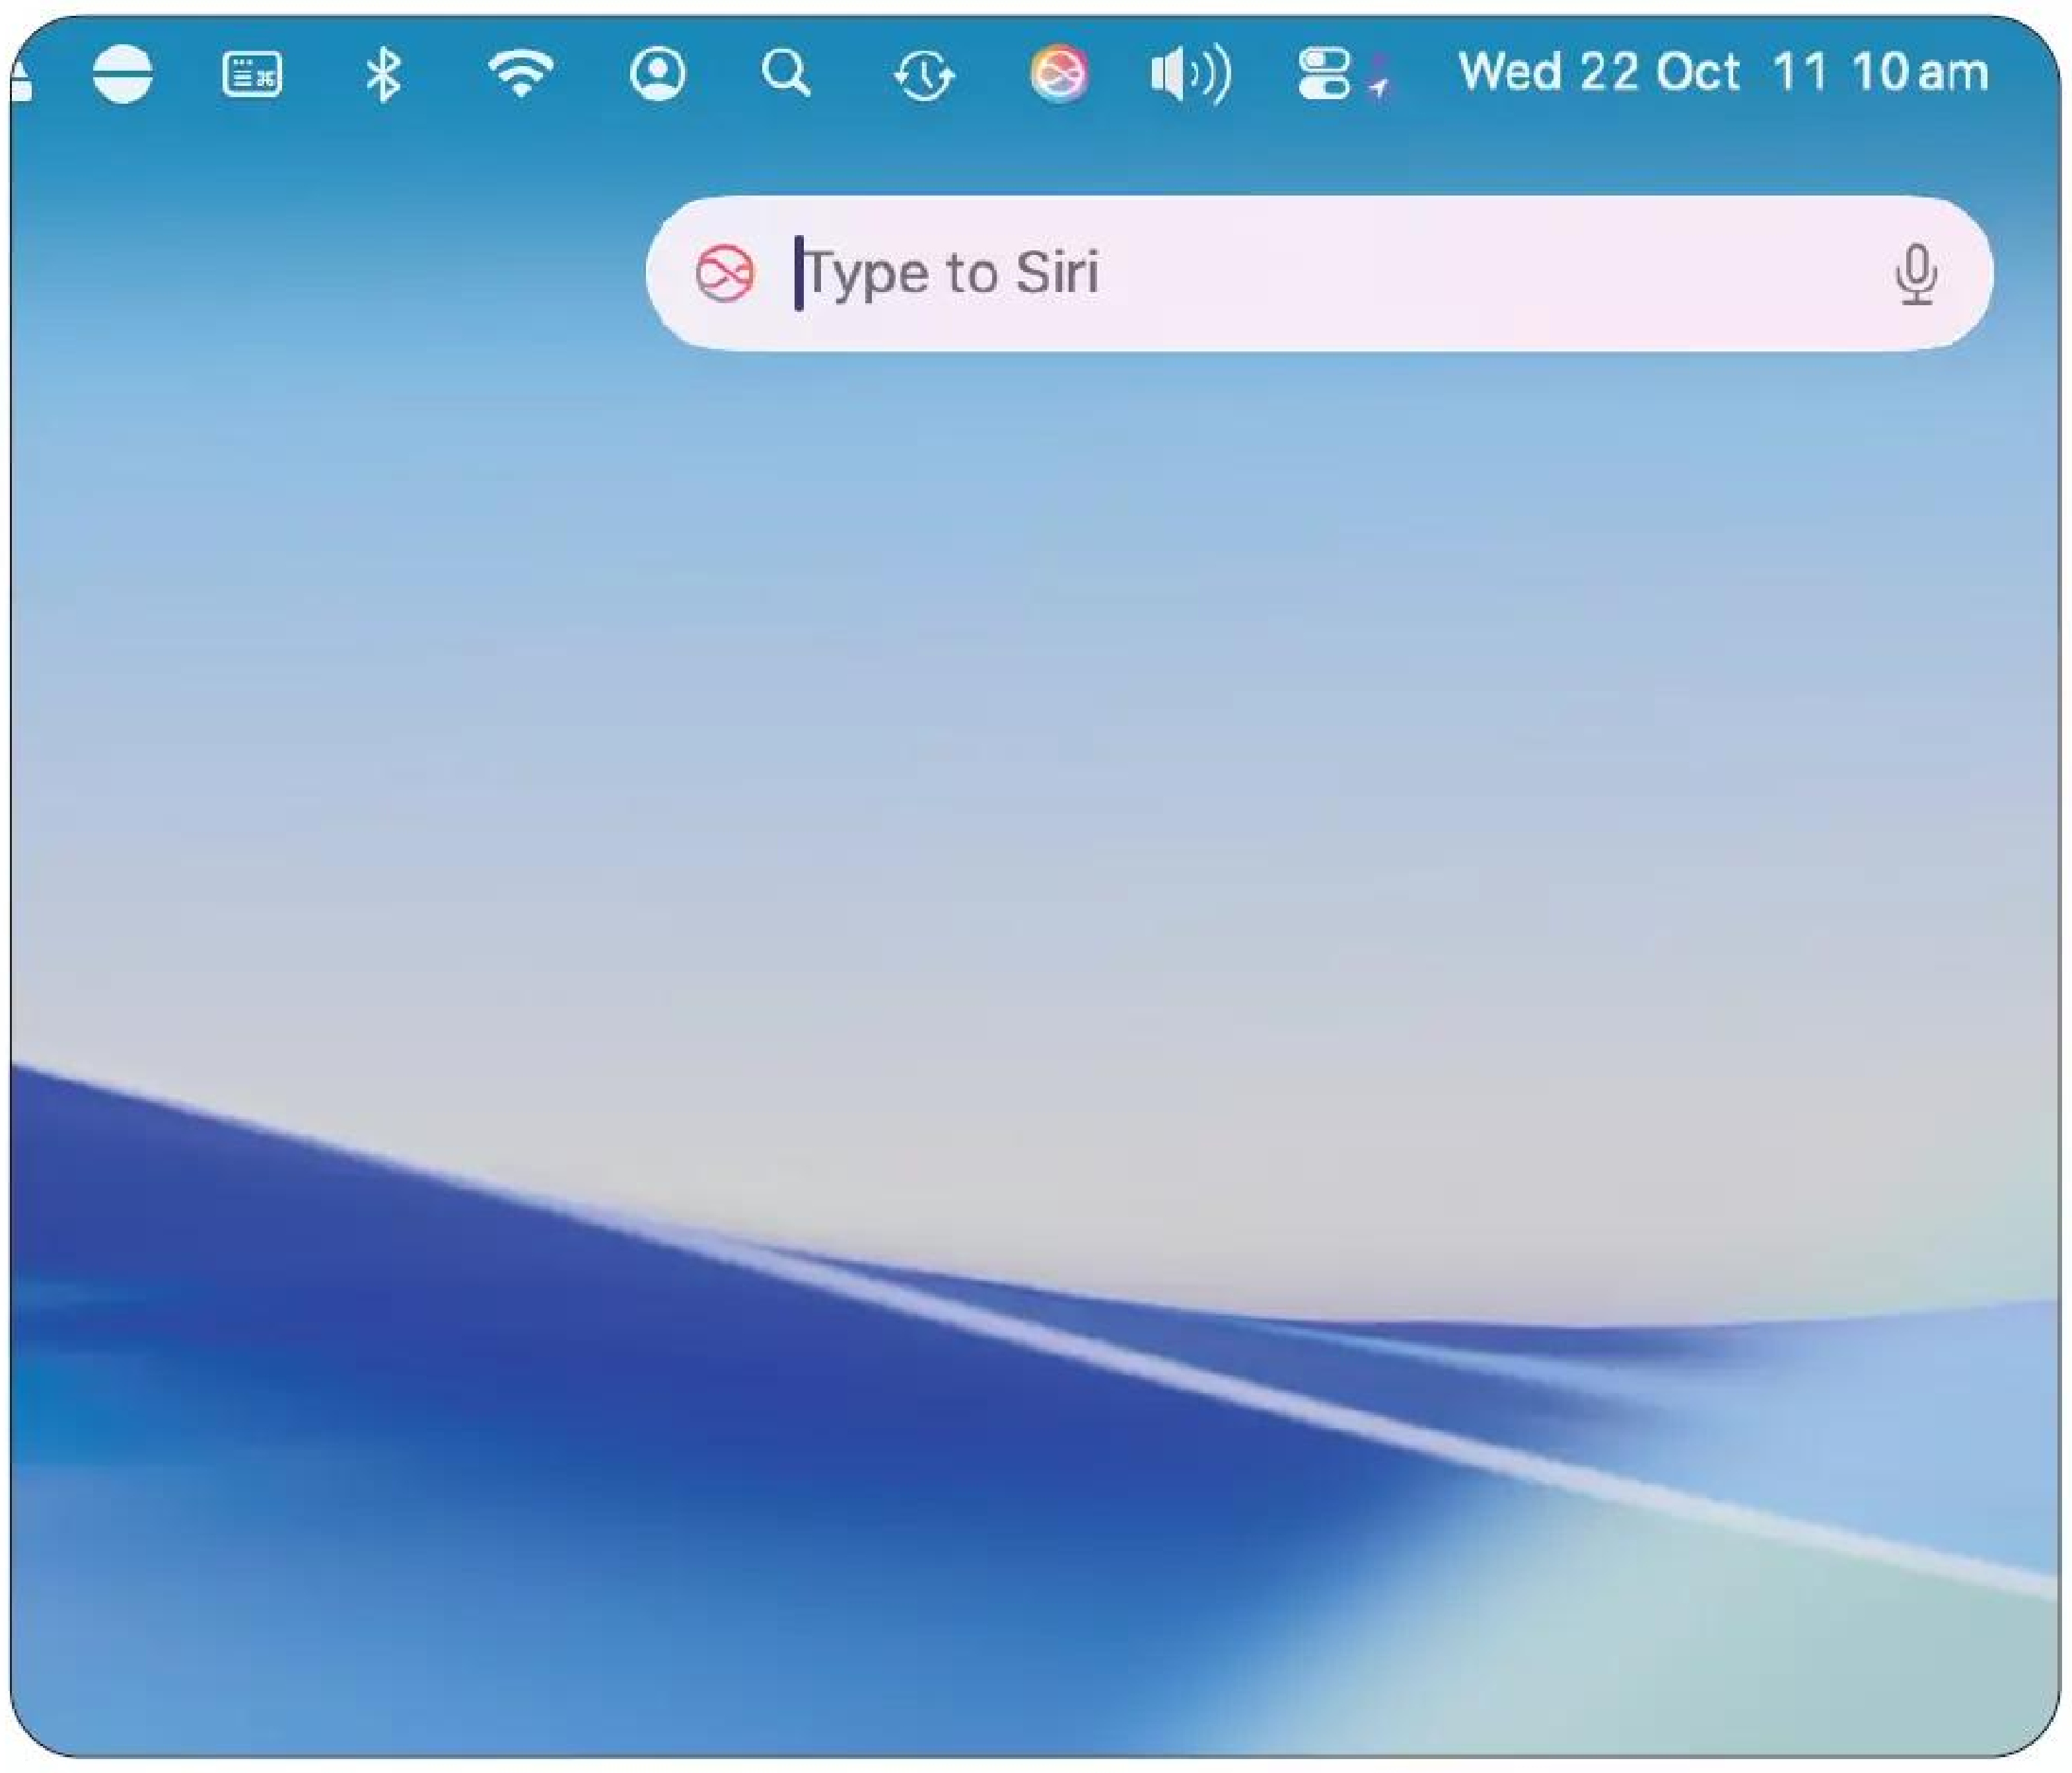
A new Apple Intelligence-powered Focus keeps interruptions to a minimum, while still allowing urgent or important ones through.

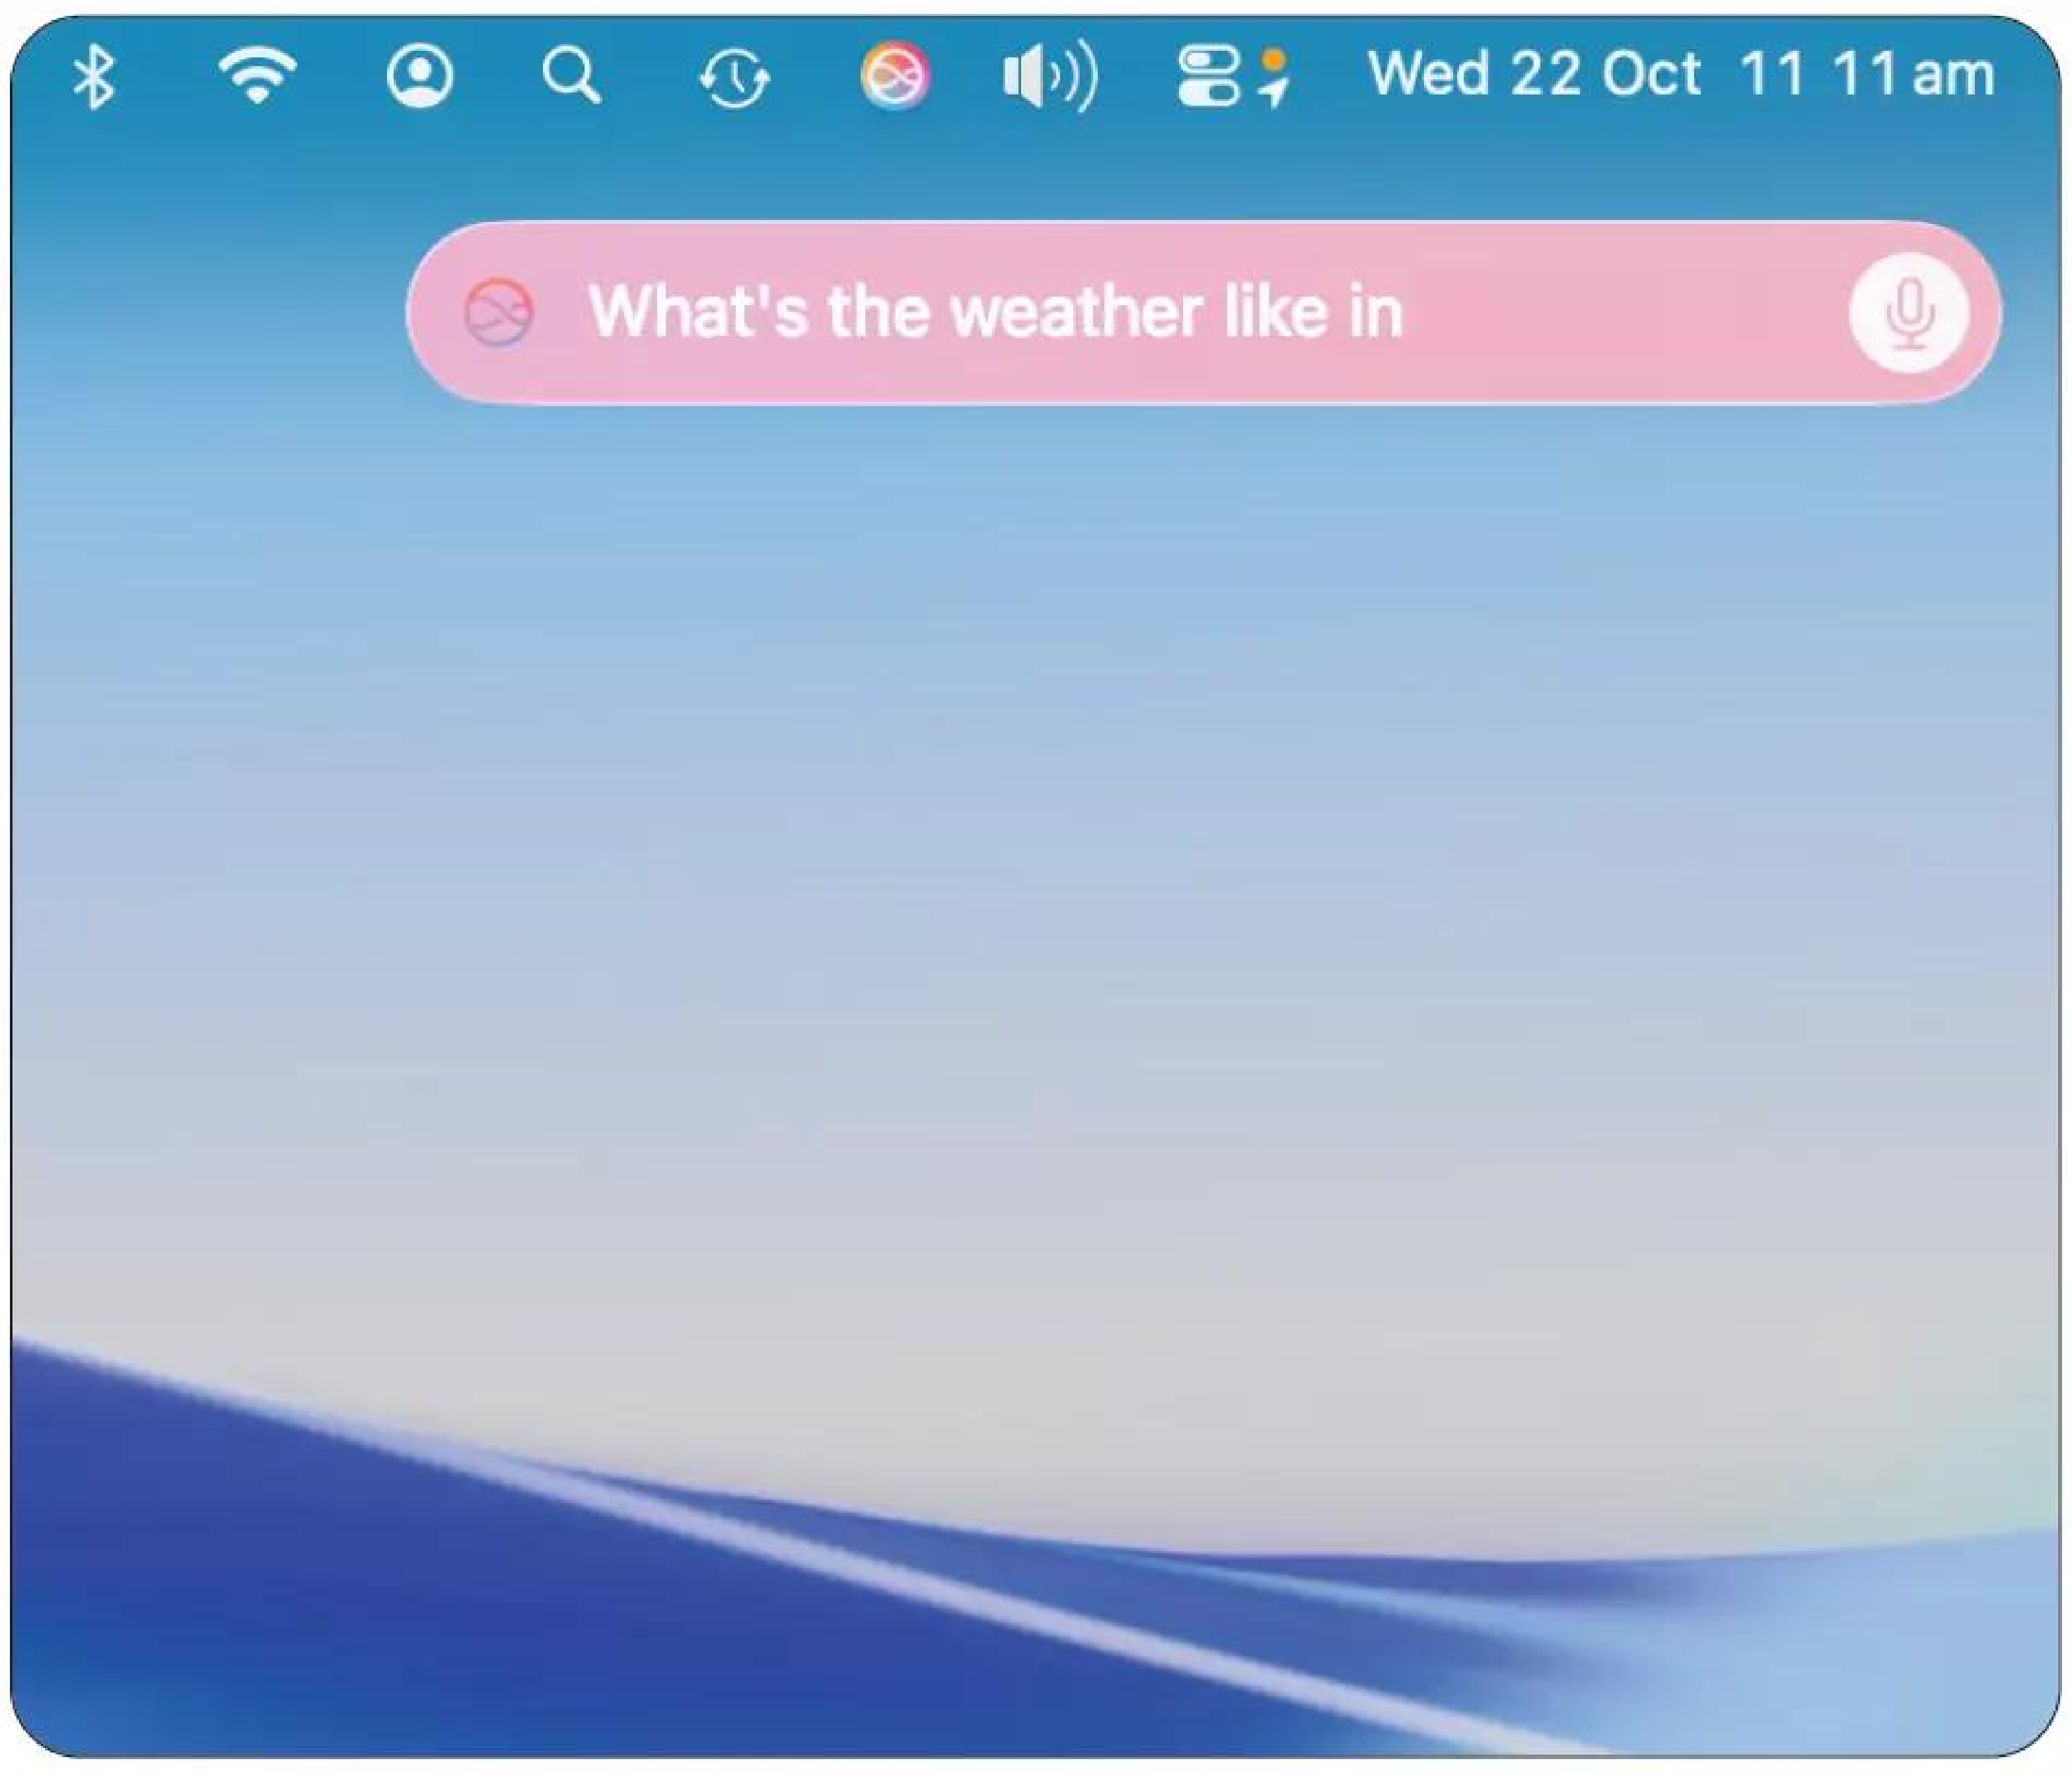
Privacy

Apple Intelligence respects your privacy. Most of the processing is carried out on your Mac, so the personal information it uses is not sent to another party, even Apple. If Apple Intelligence has to contact an outside source, it exclusively uses servers that offer Private Cloud Compute, a very private system.

Siri with Apple Intelligence

Drawing on Apple Intelligence, the Siri digital assistant gains some great new abilities. It has an all-new design and deeper system integration too.

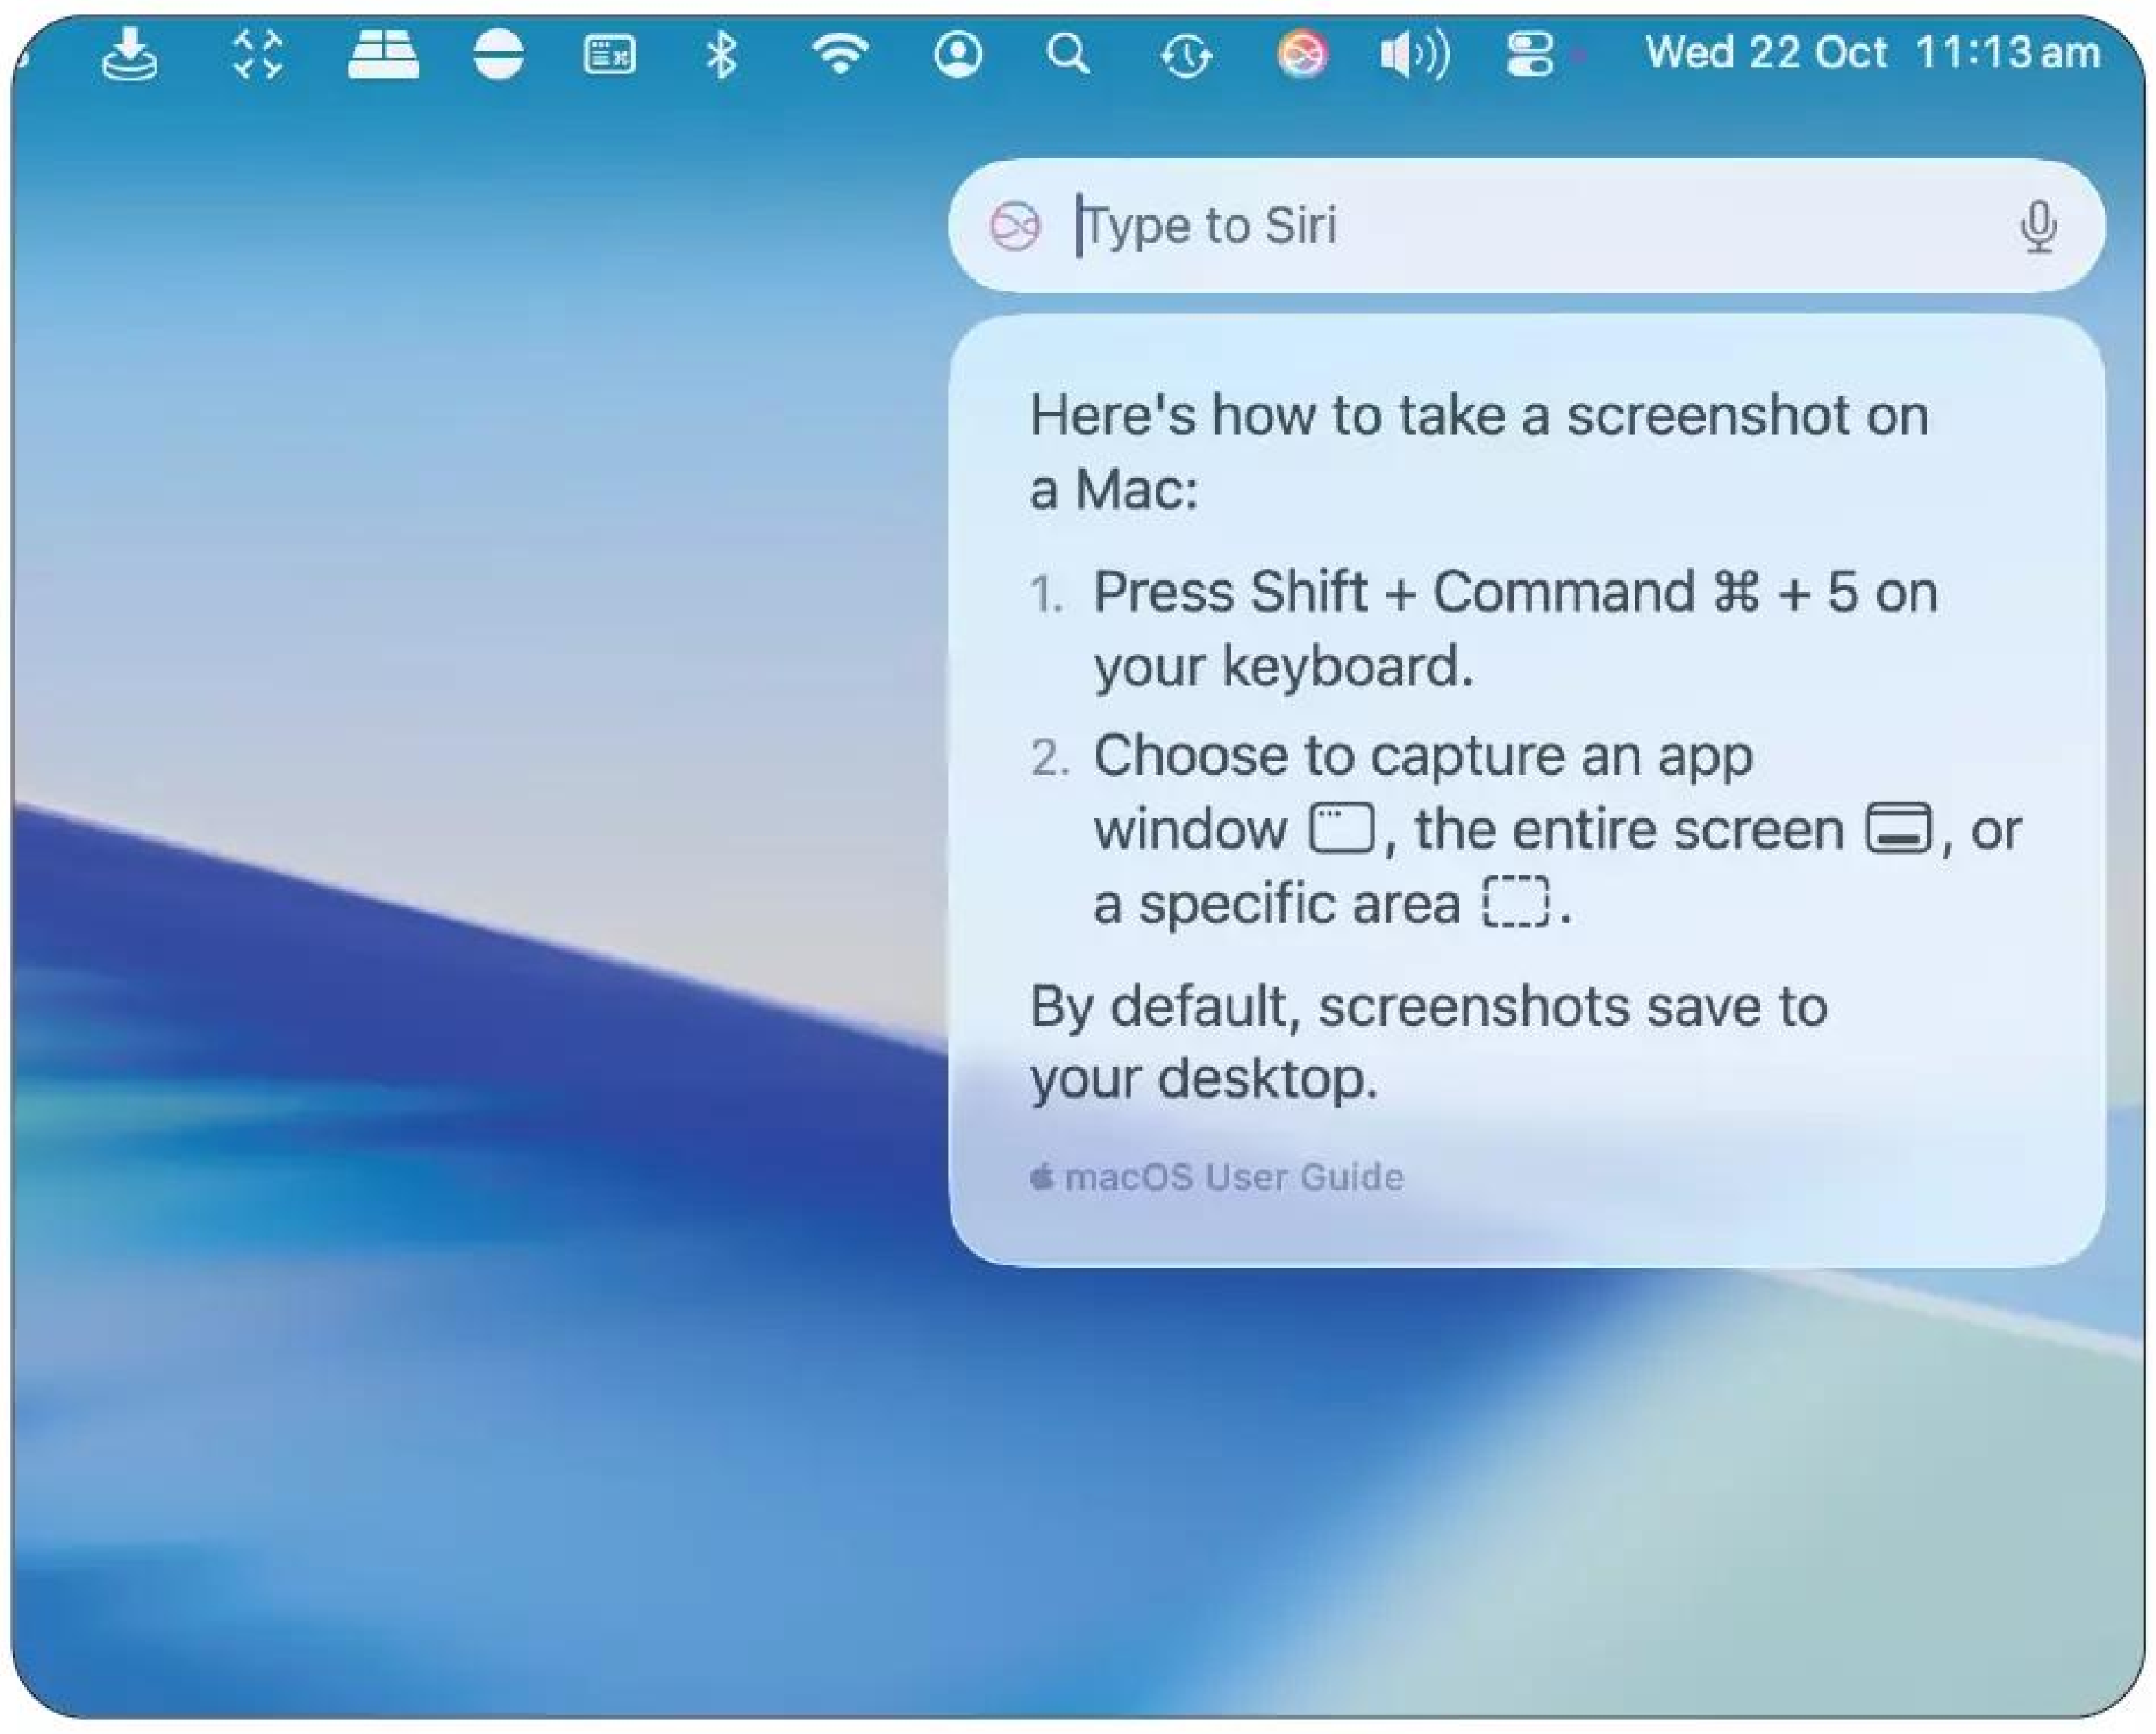




What's the weather like in

1 Click the top bar icon or say Siri/Hey Siri to activate the Siri feature. A glowing text field in the top-right corner of the screen shows it is active.

2 In the right-hand side of the Siri text field is a microphone icon. Click it and you can speak your Siri request instead of typing it on the keyboard.

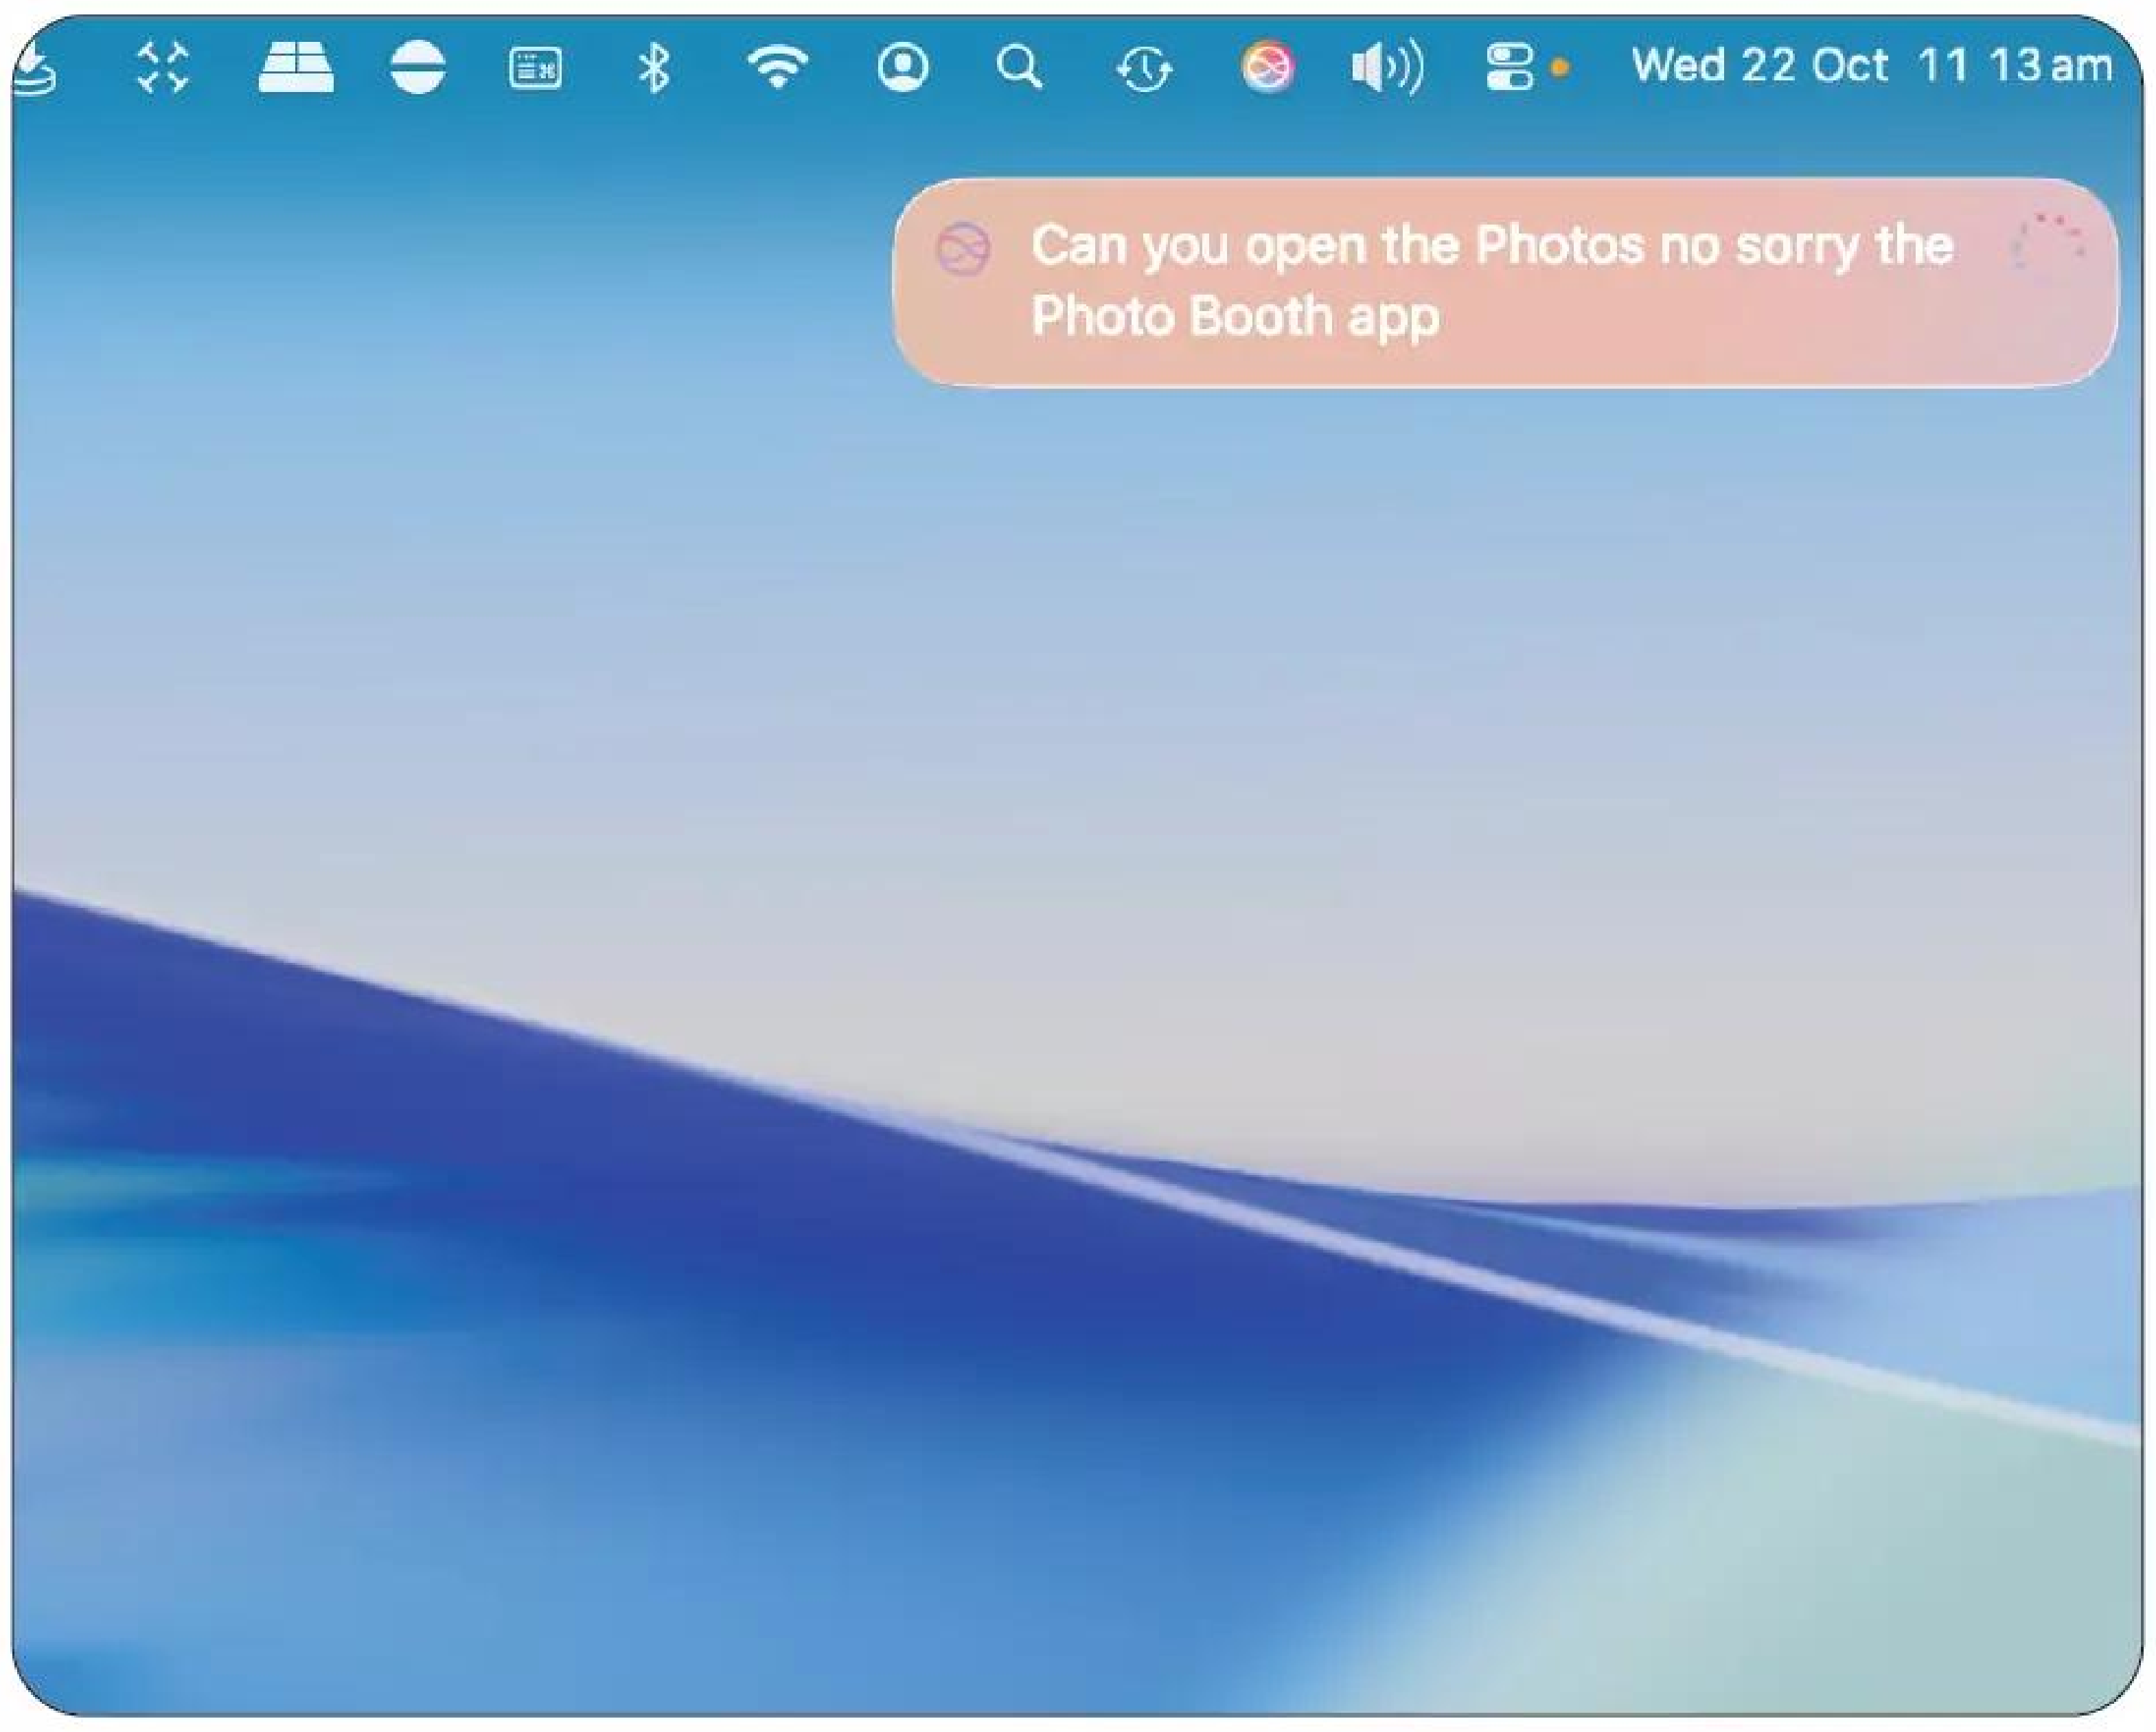


Here's how to take a screenshot on a Mac:

1. Press Shift + Command ⌘ + 5 on your keyboard.
2. Choose to capture an app window, the entire screen, or a specific area.

By default, screenshots save to your desktop.

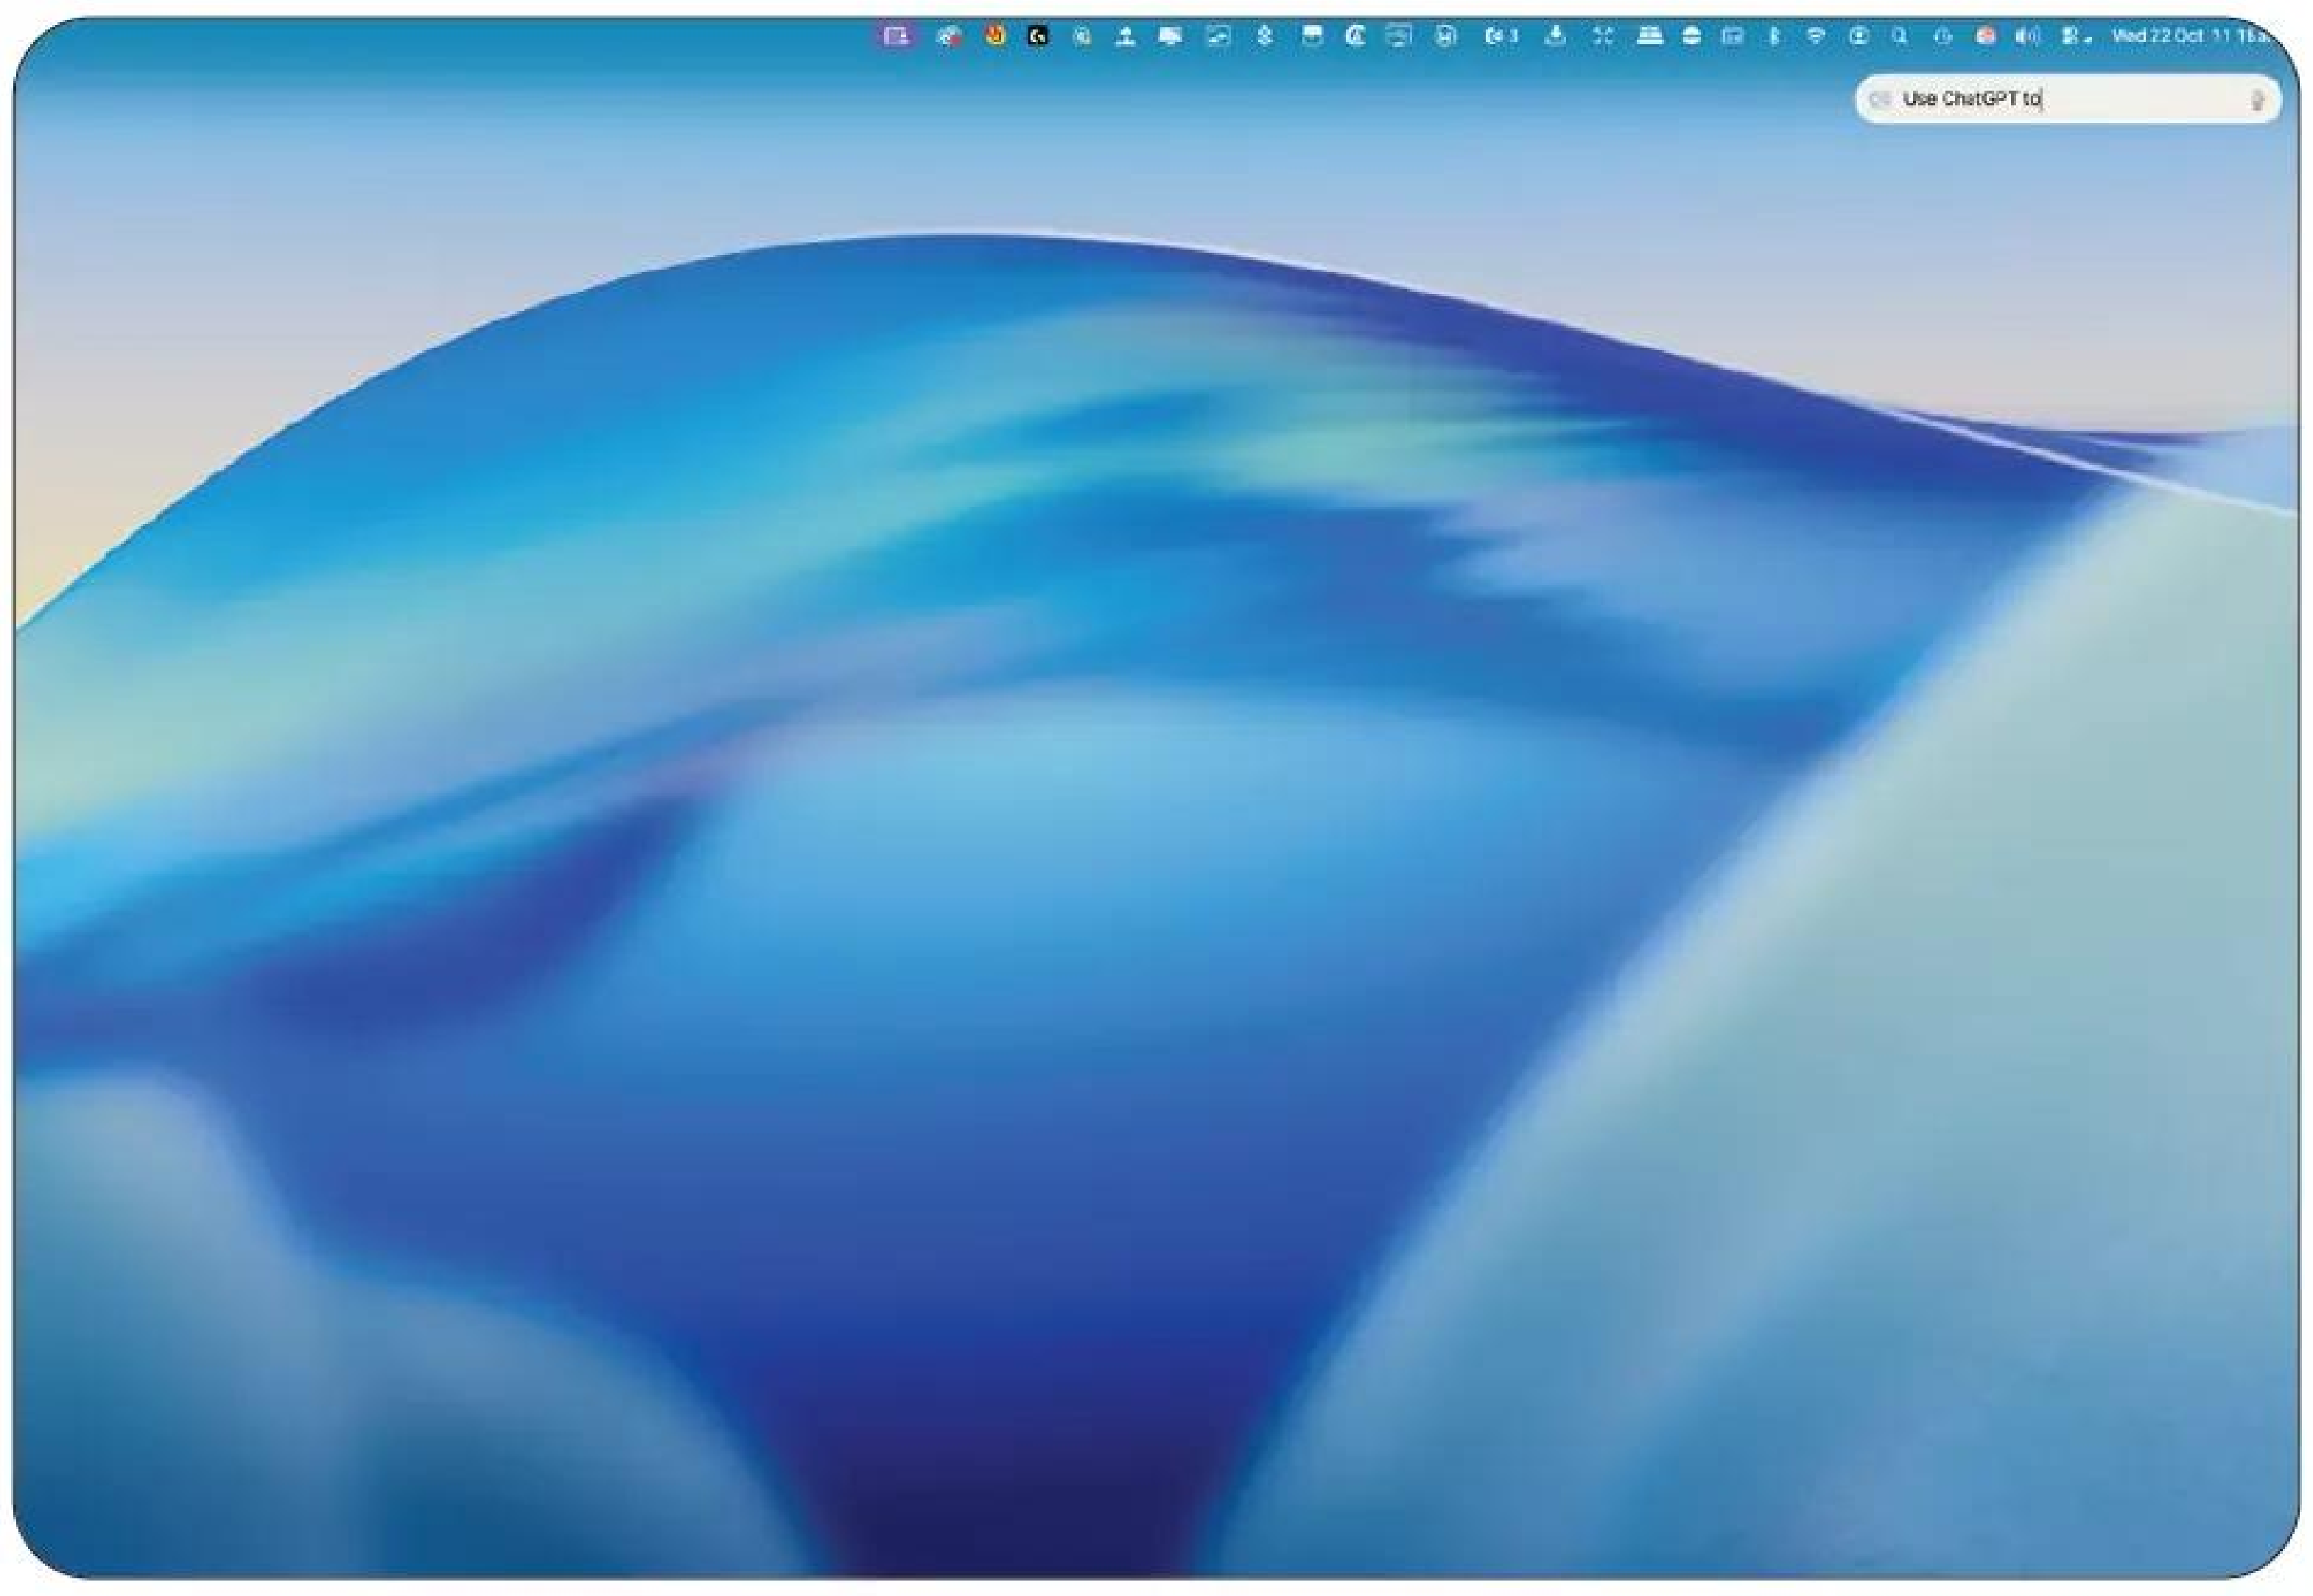
macOS User Guide



Can you open the Photos no sorry the Photo Booth app

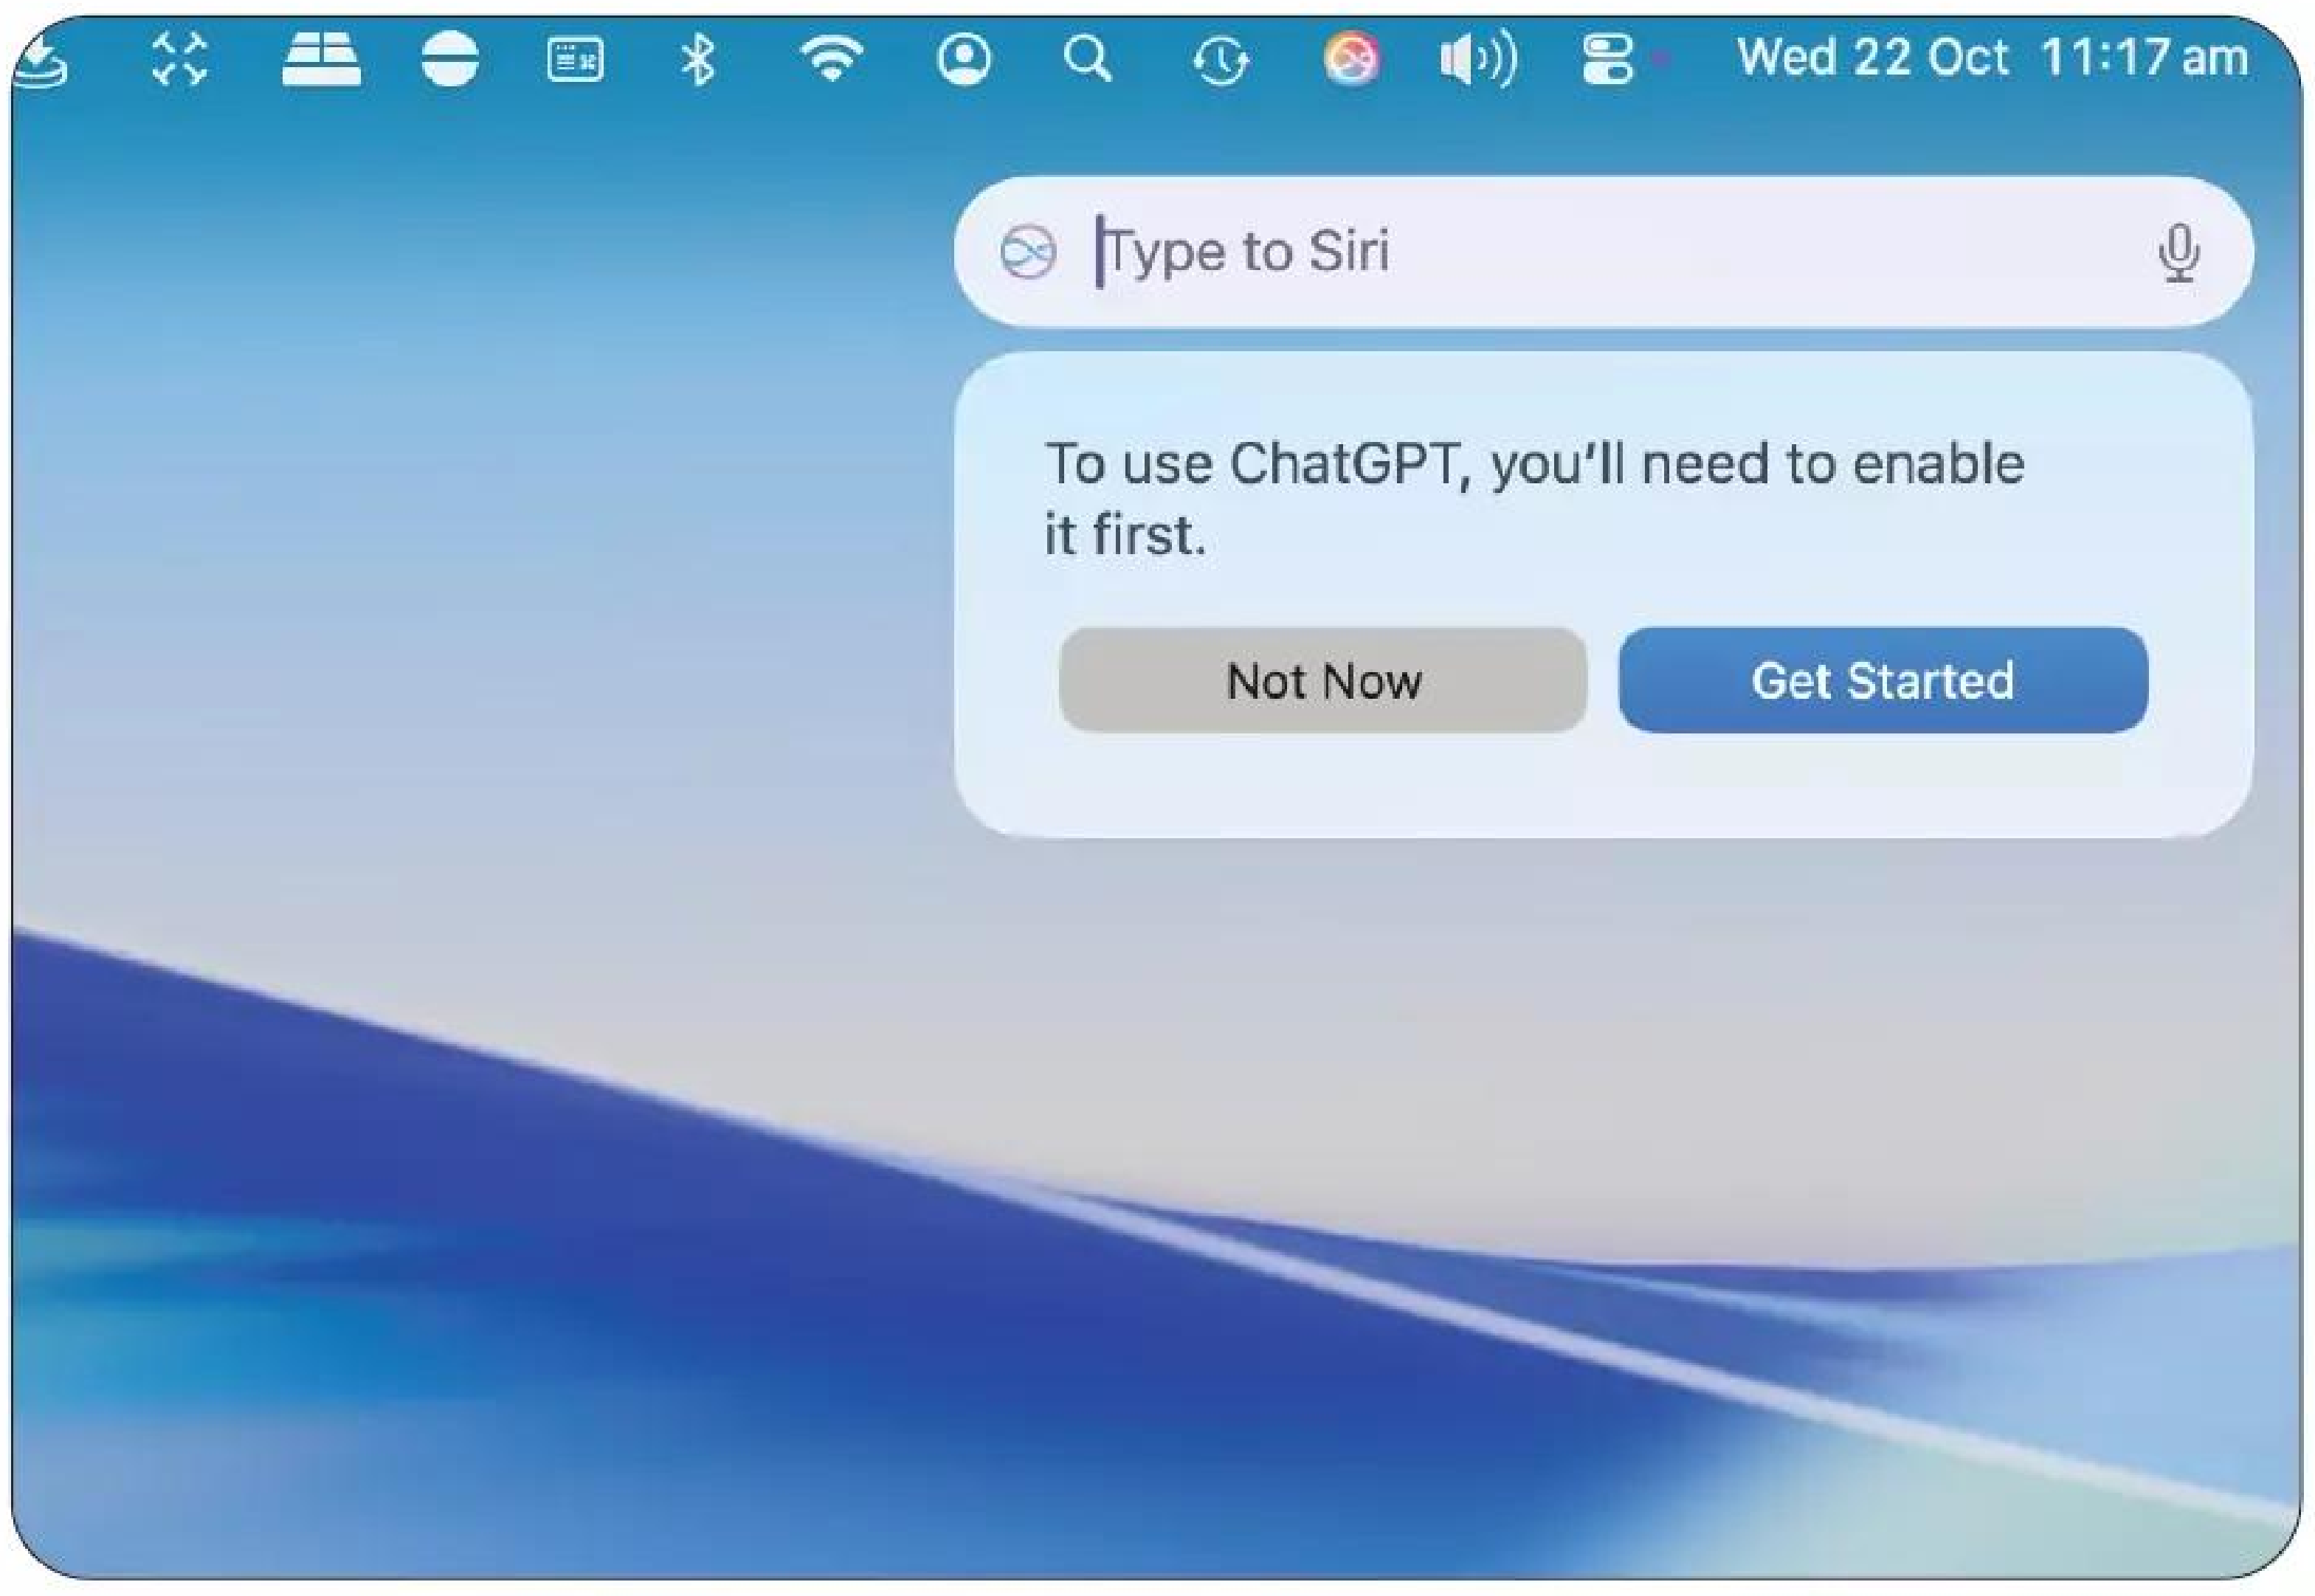
3 Siri is so deeply integrated into macOS, you can ask it how to do something on your Mac and you're told. It's great if you're stuck on something in an app or the Finder.

4 Thanks to Apple Intelligence, you can correct yourself in a Siri request, or follow on from a previous one, and you will be understood and updated.



Use ChatGPT to|

5 If you don't get the response you wanted from Siri, try using ChatGPT. Make your request again, this time prefixing it with 'Use ChatGPT to...'

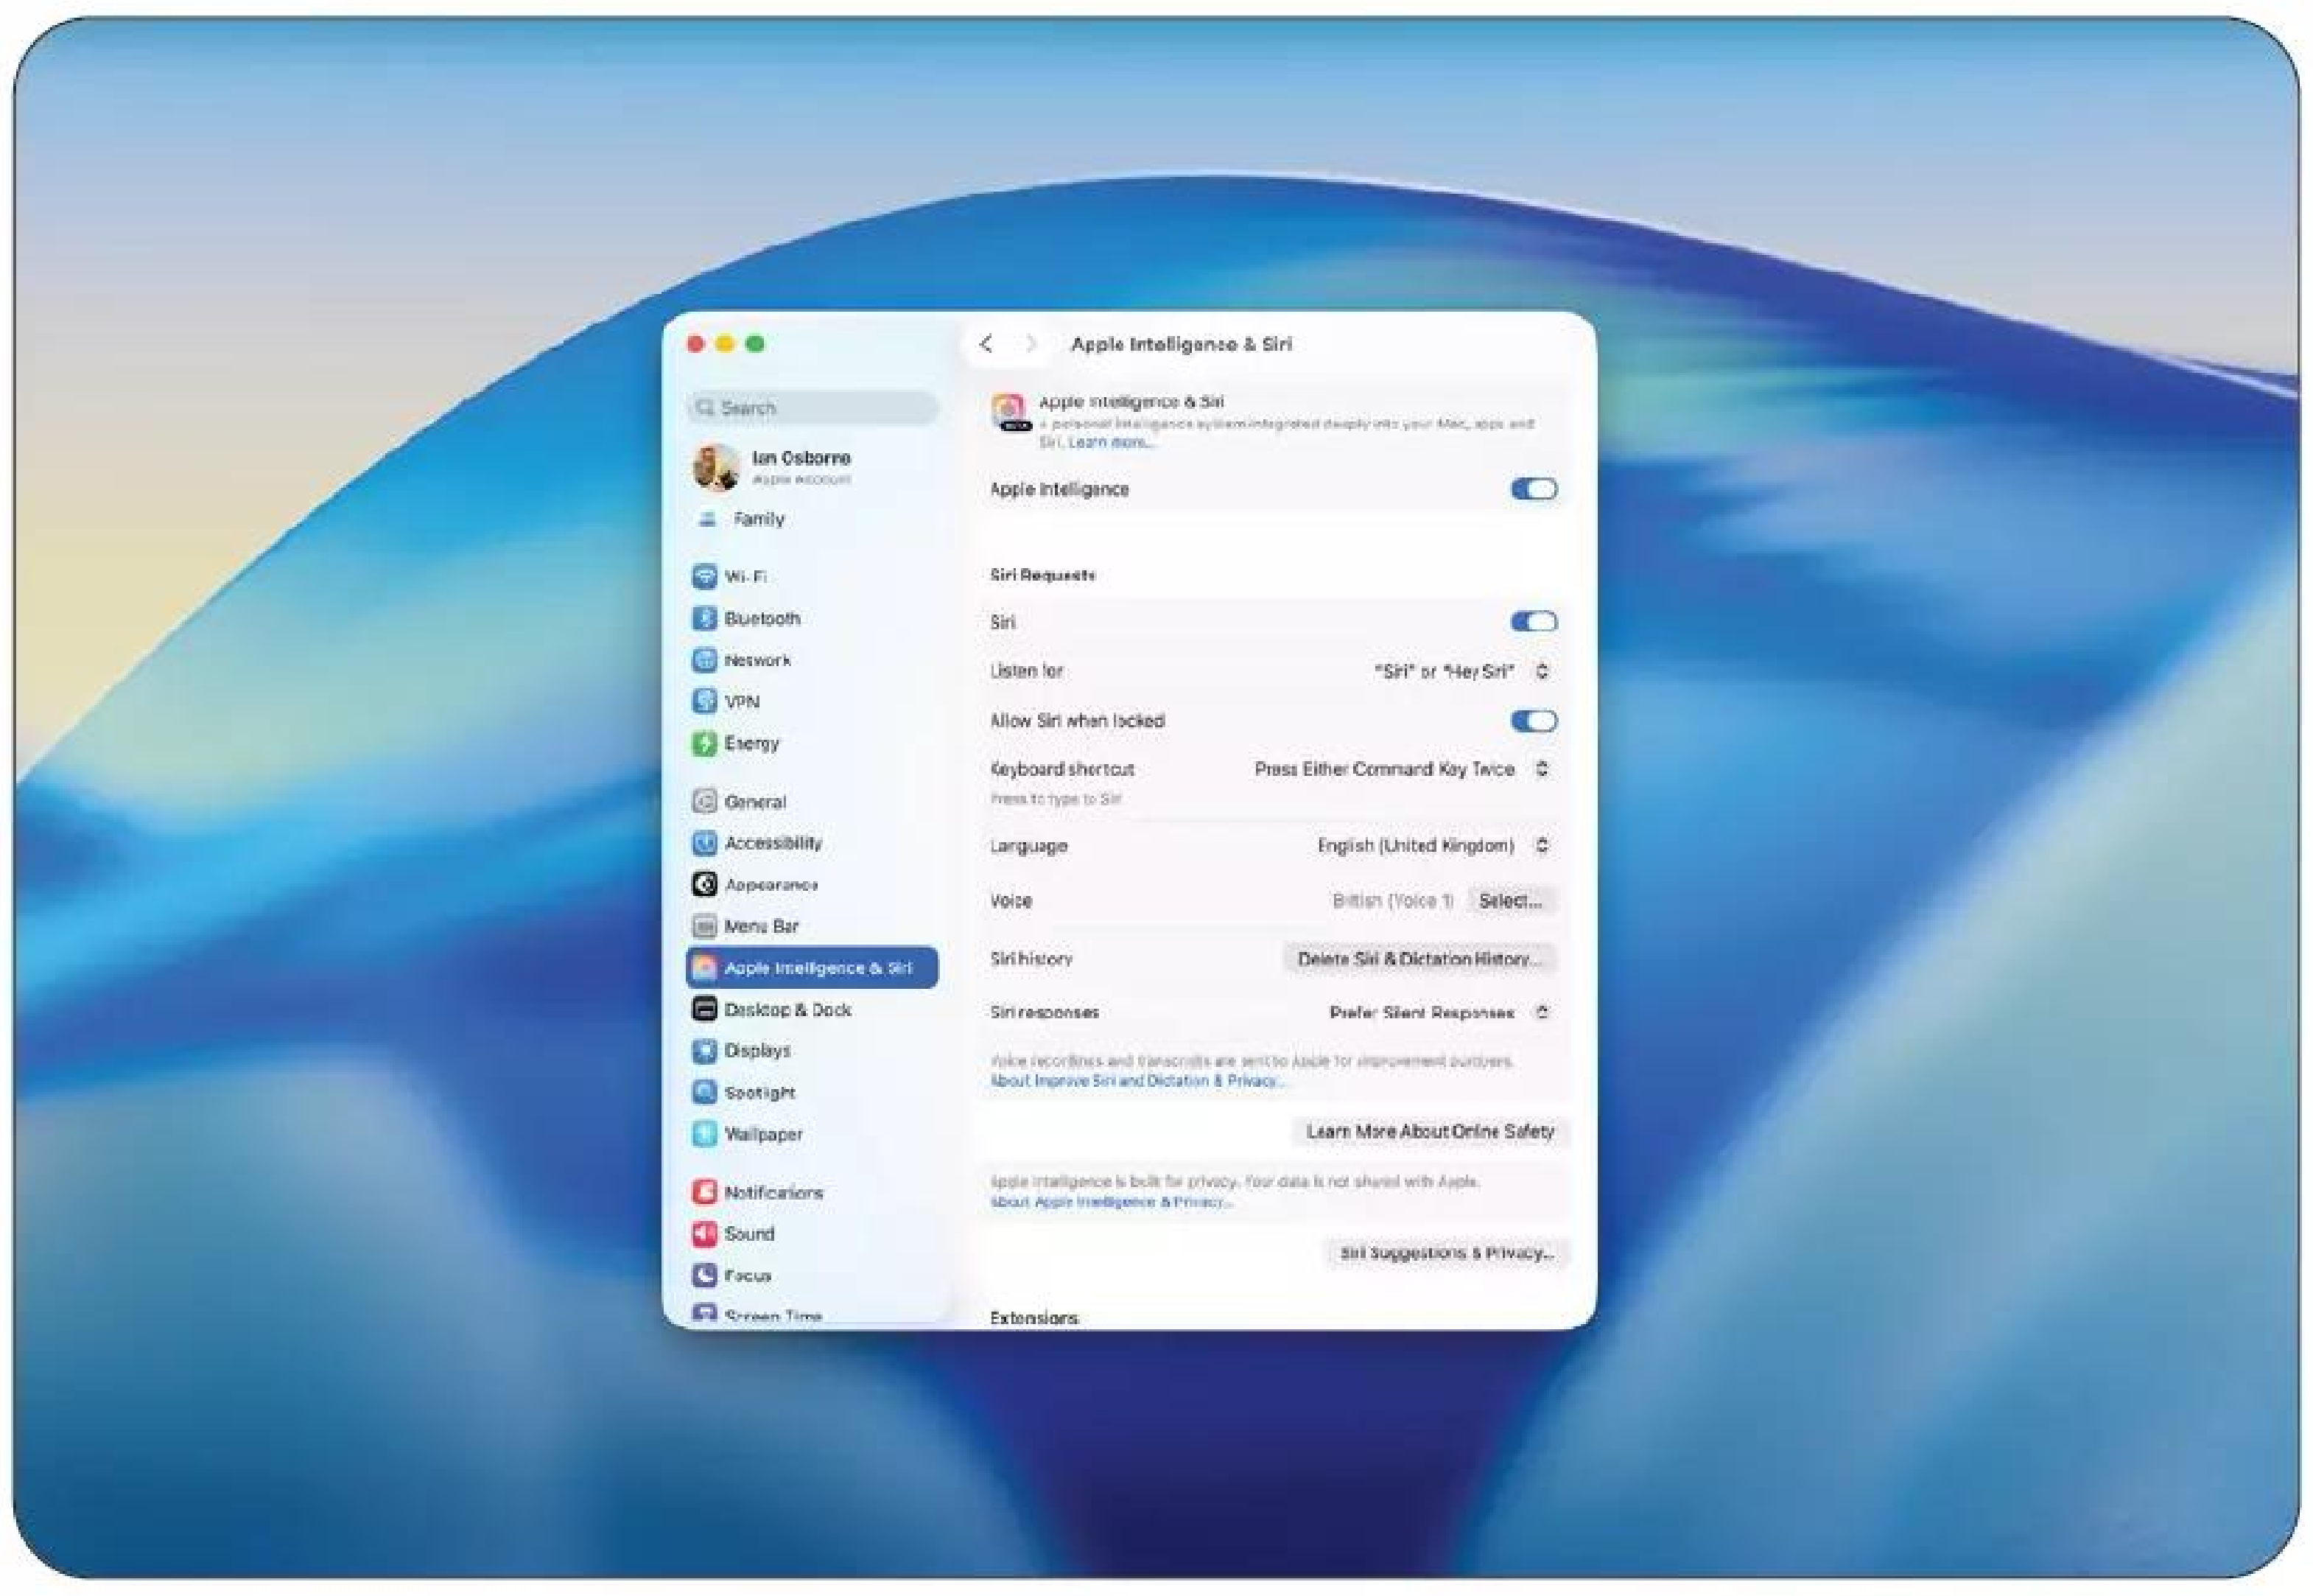


Wed 22 Oct 11:17 am
Type to Siri
Not Now
Get Started

To use ChatGPT, you'll need to enable it first.

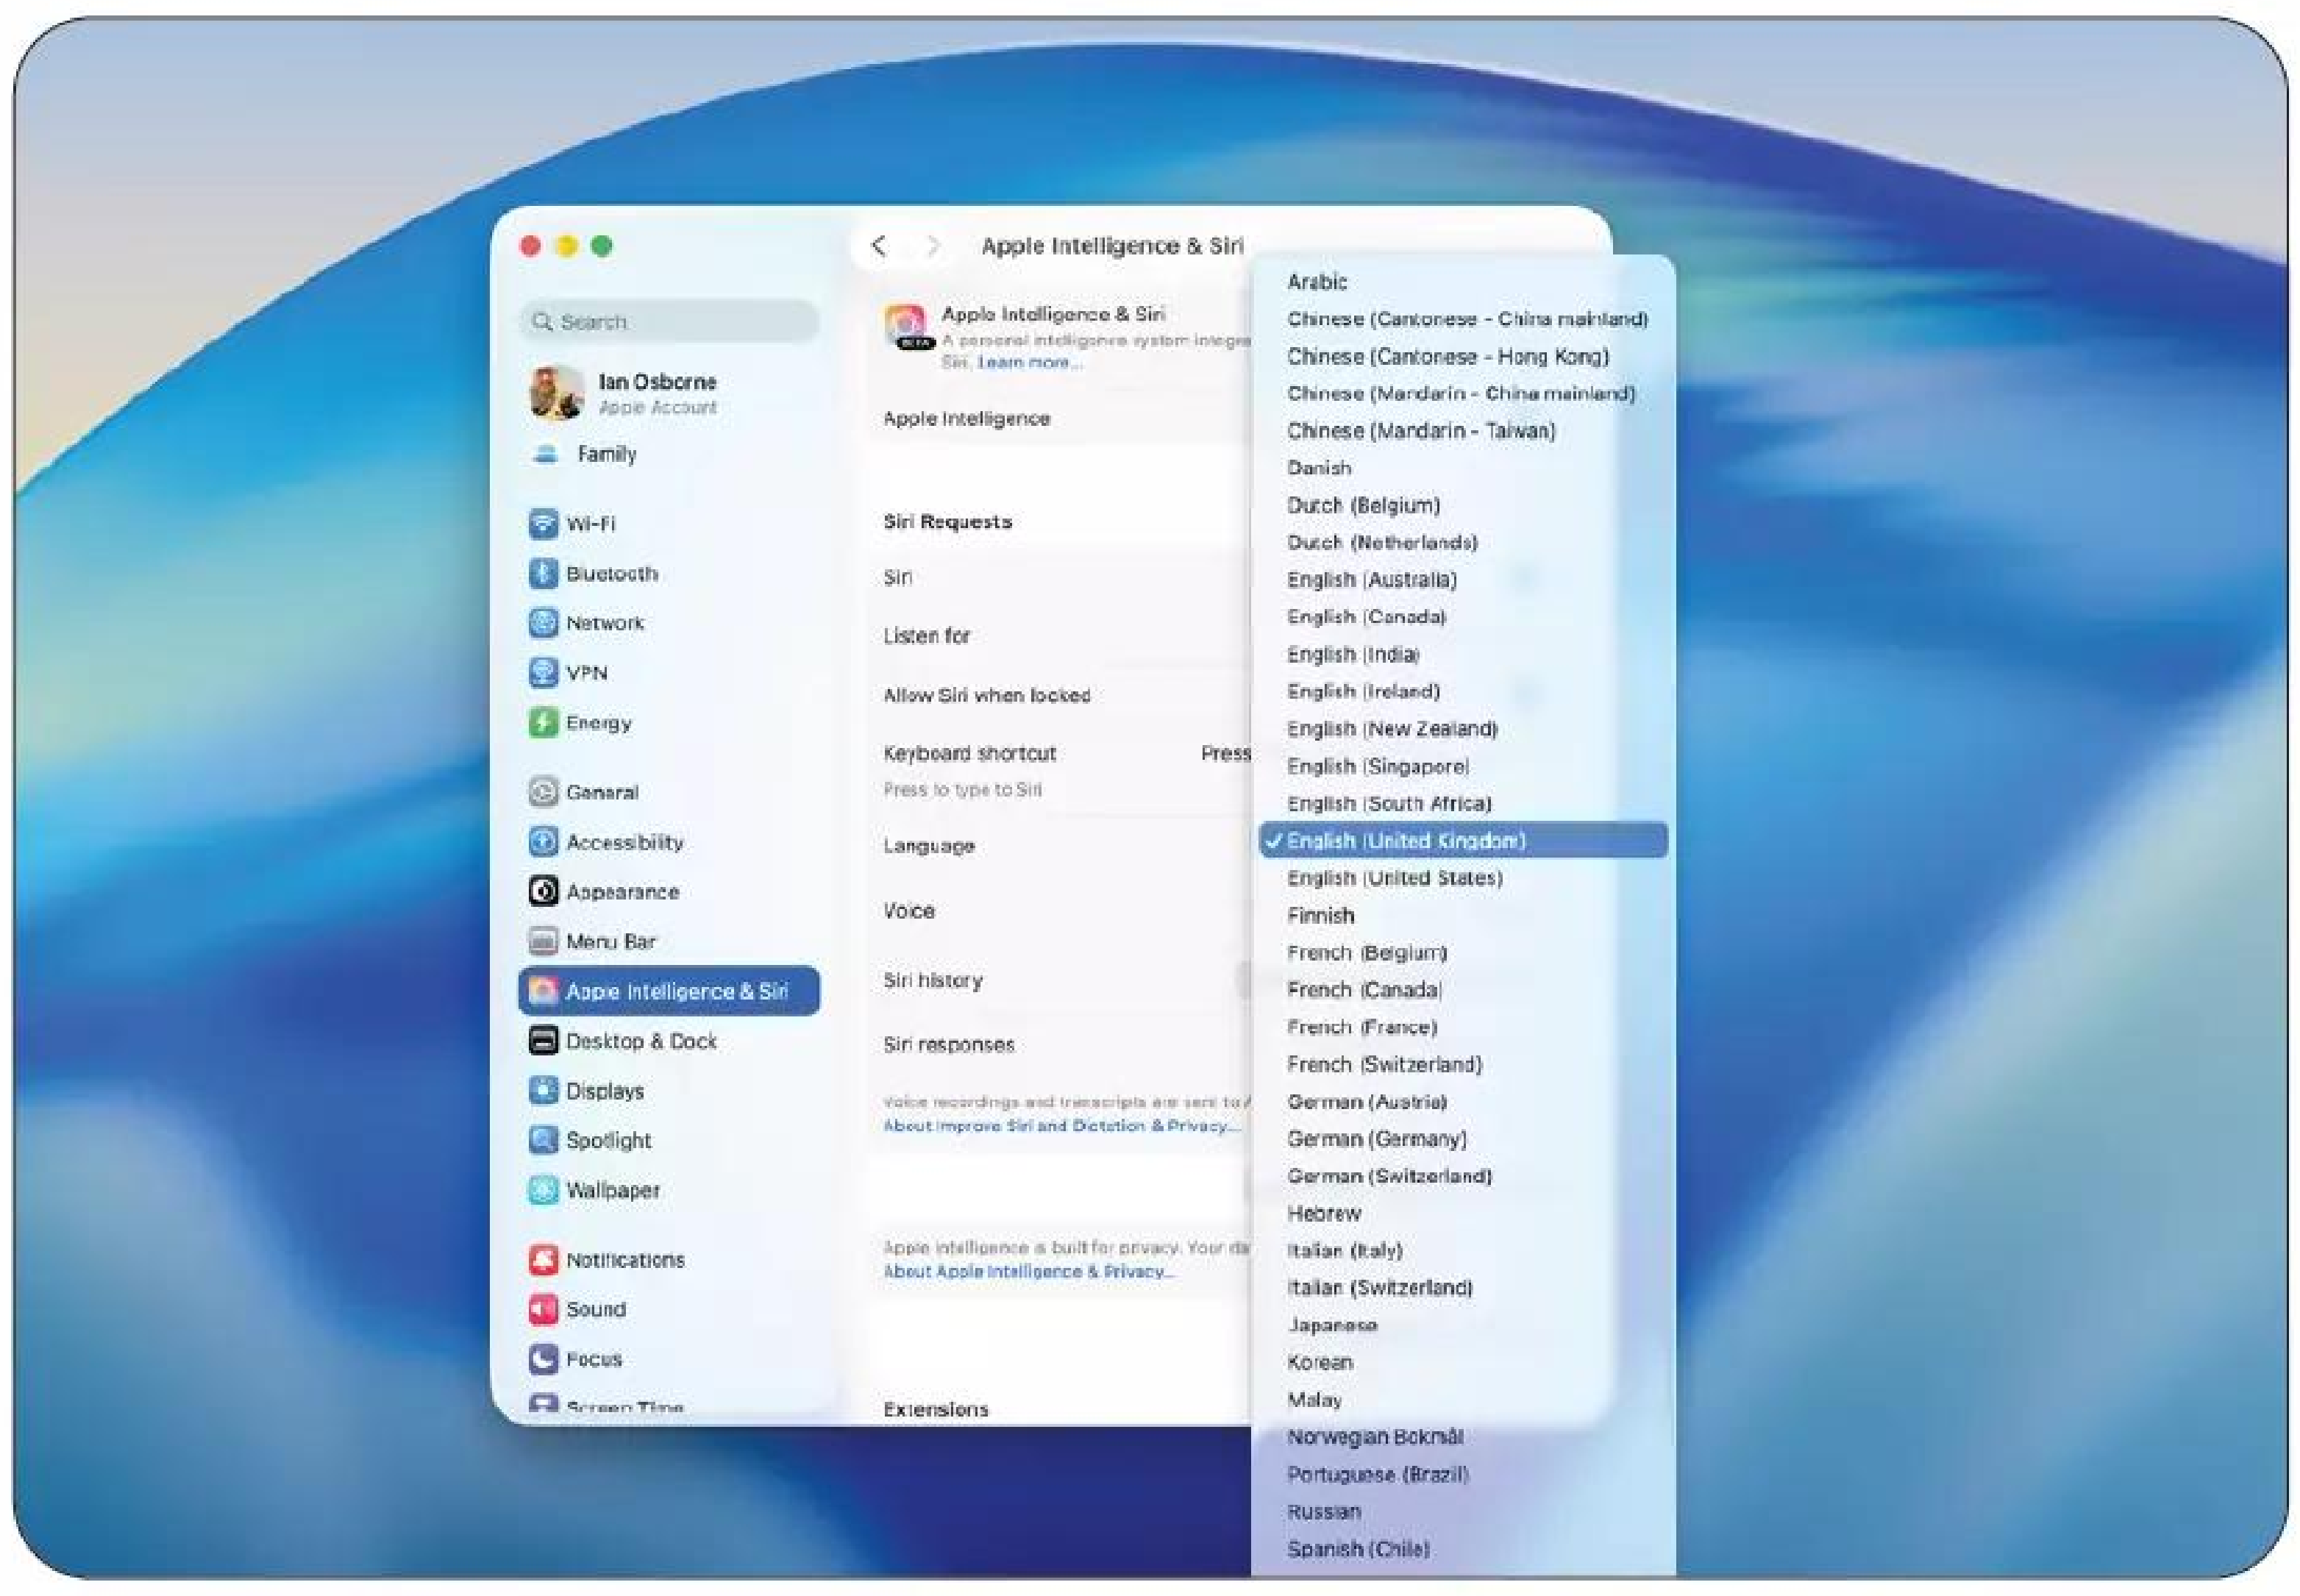
6 When invited to enable ChatGPT, tap Get Started and follow the on-screen instructions. ChatGPT is only used in Siri with your permission.

Setting Up Siri On macOS



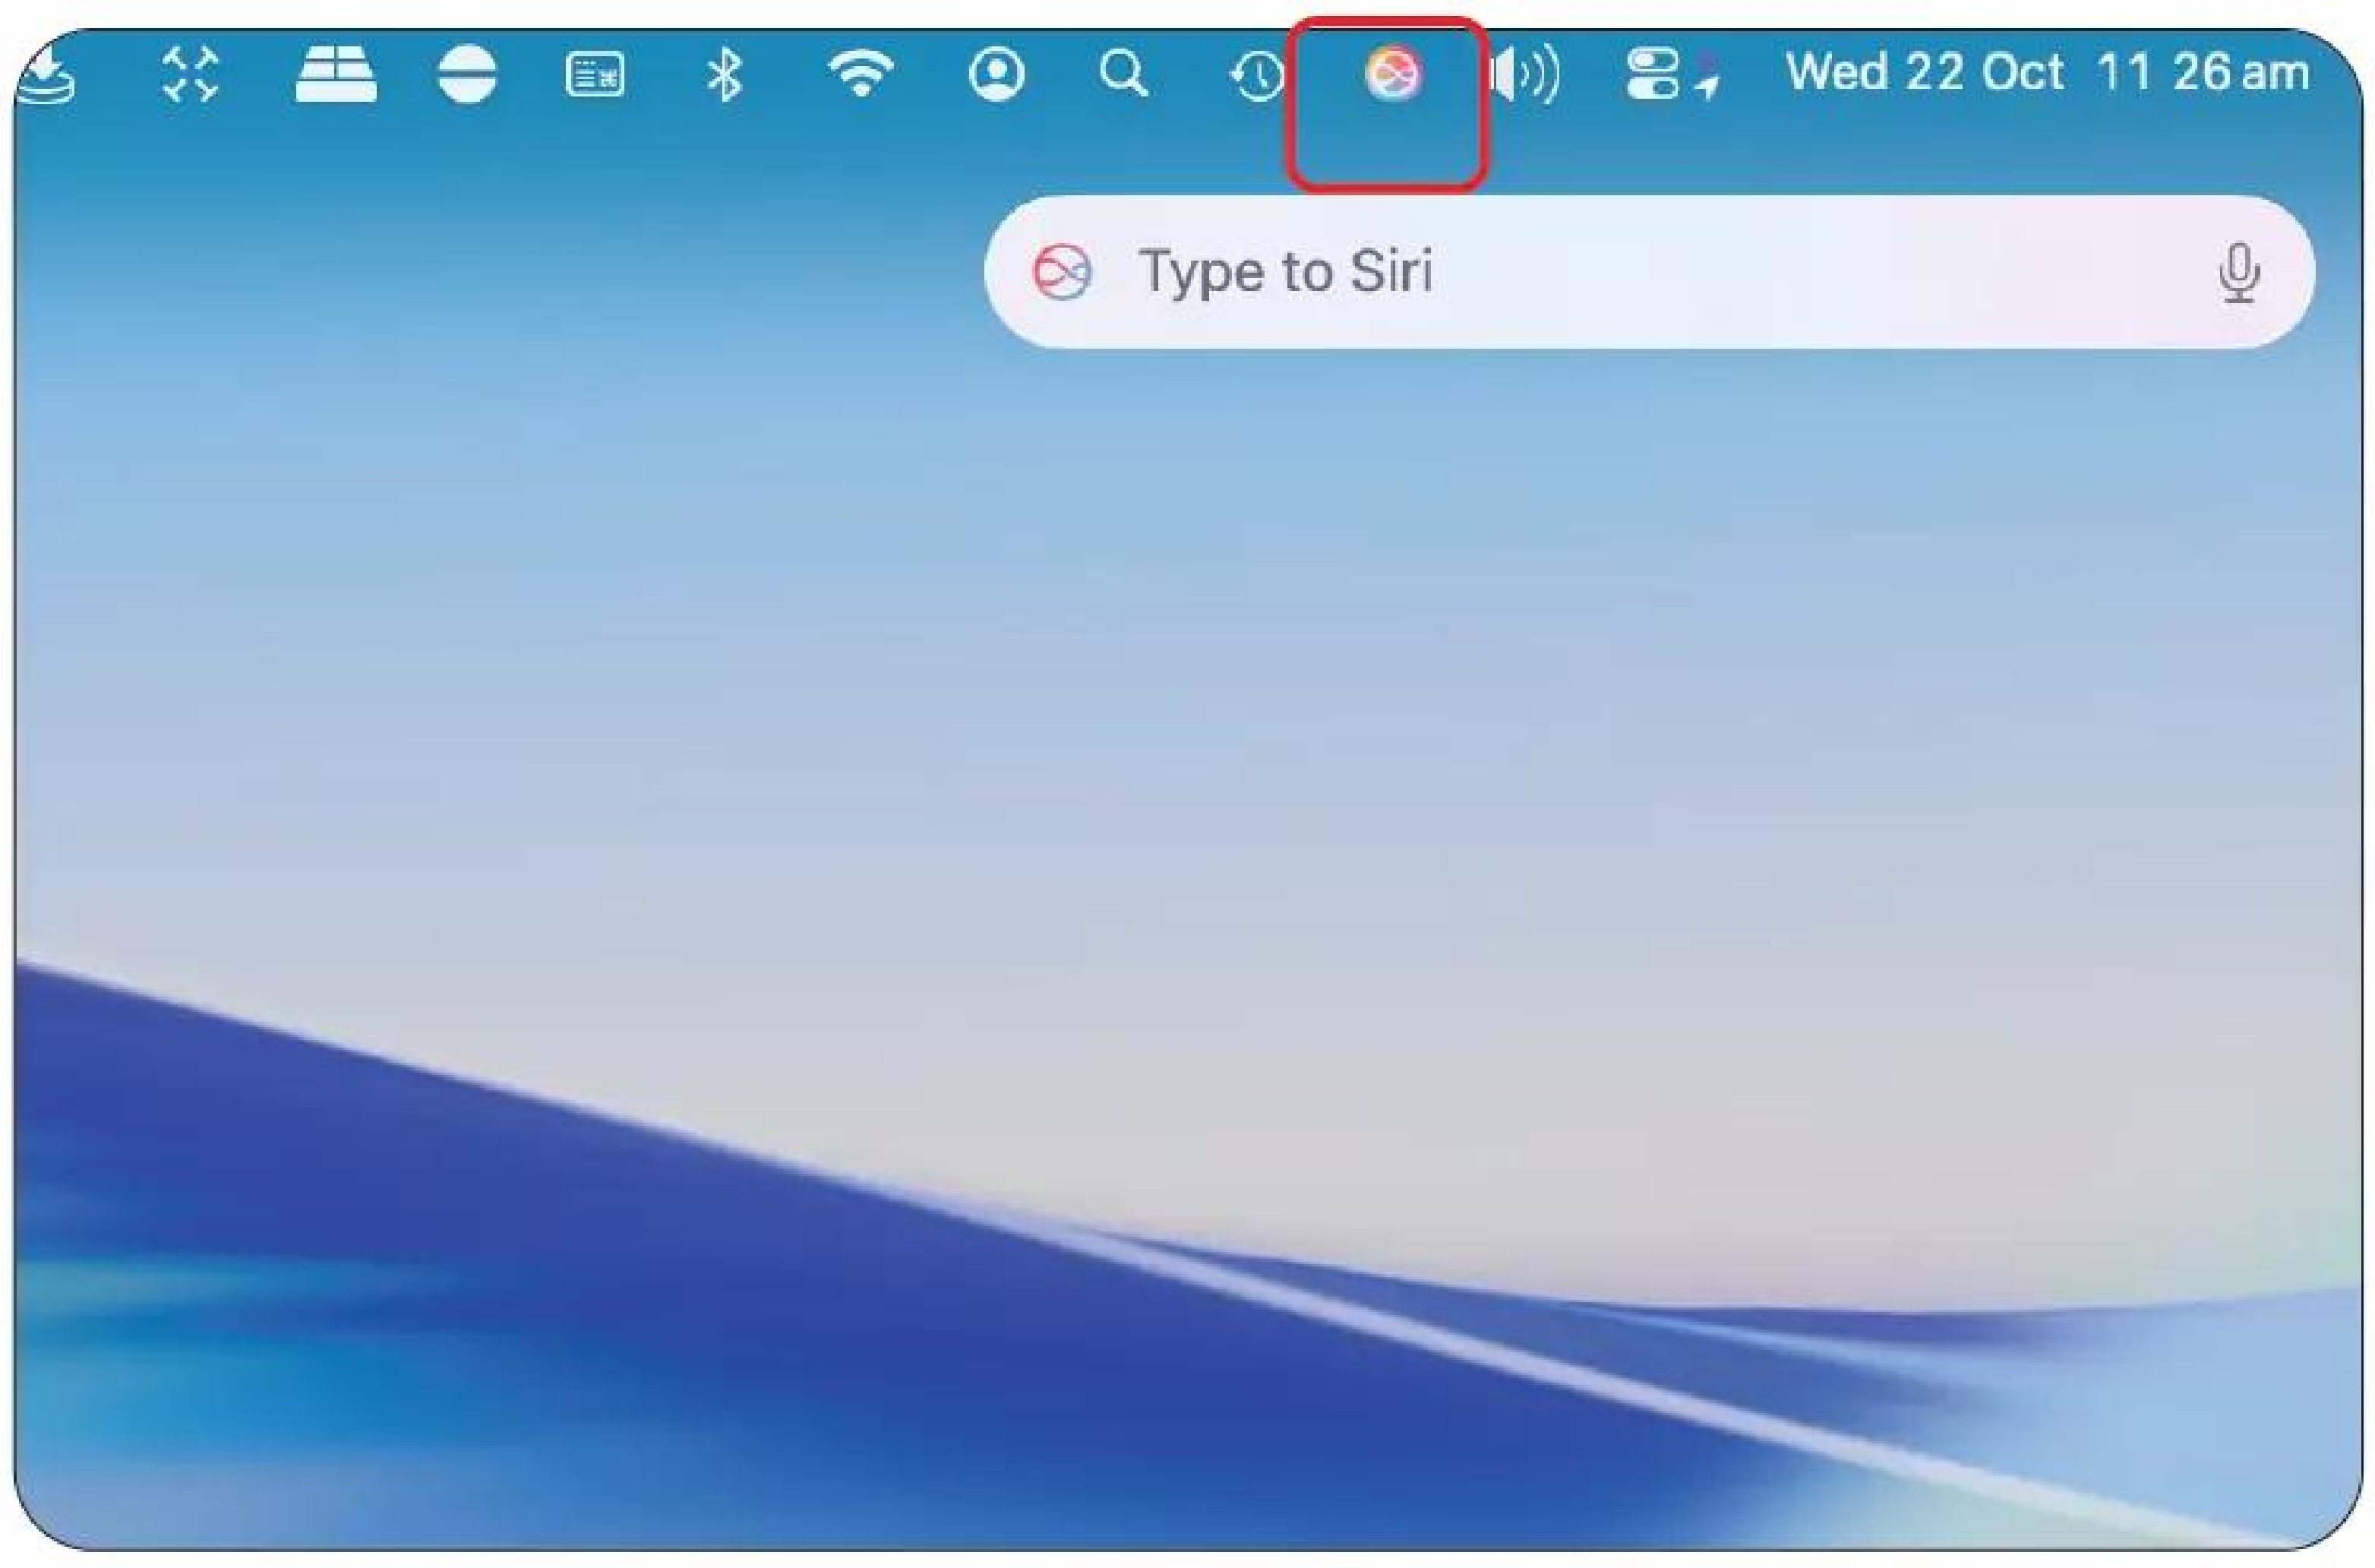
Apple Intelligence & Siri

1 You might have activated Siri during the set up procedure. If not, under the Apple menu, select System Settings. Click Apple Intelligence & Siri in the sidebar. If it isn't already on, click on Siri's switch. You can also set whether you use 'Hey Siri' and/or 'Siri' to wake it, and other Siri options.



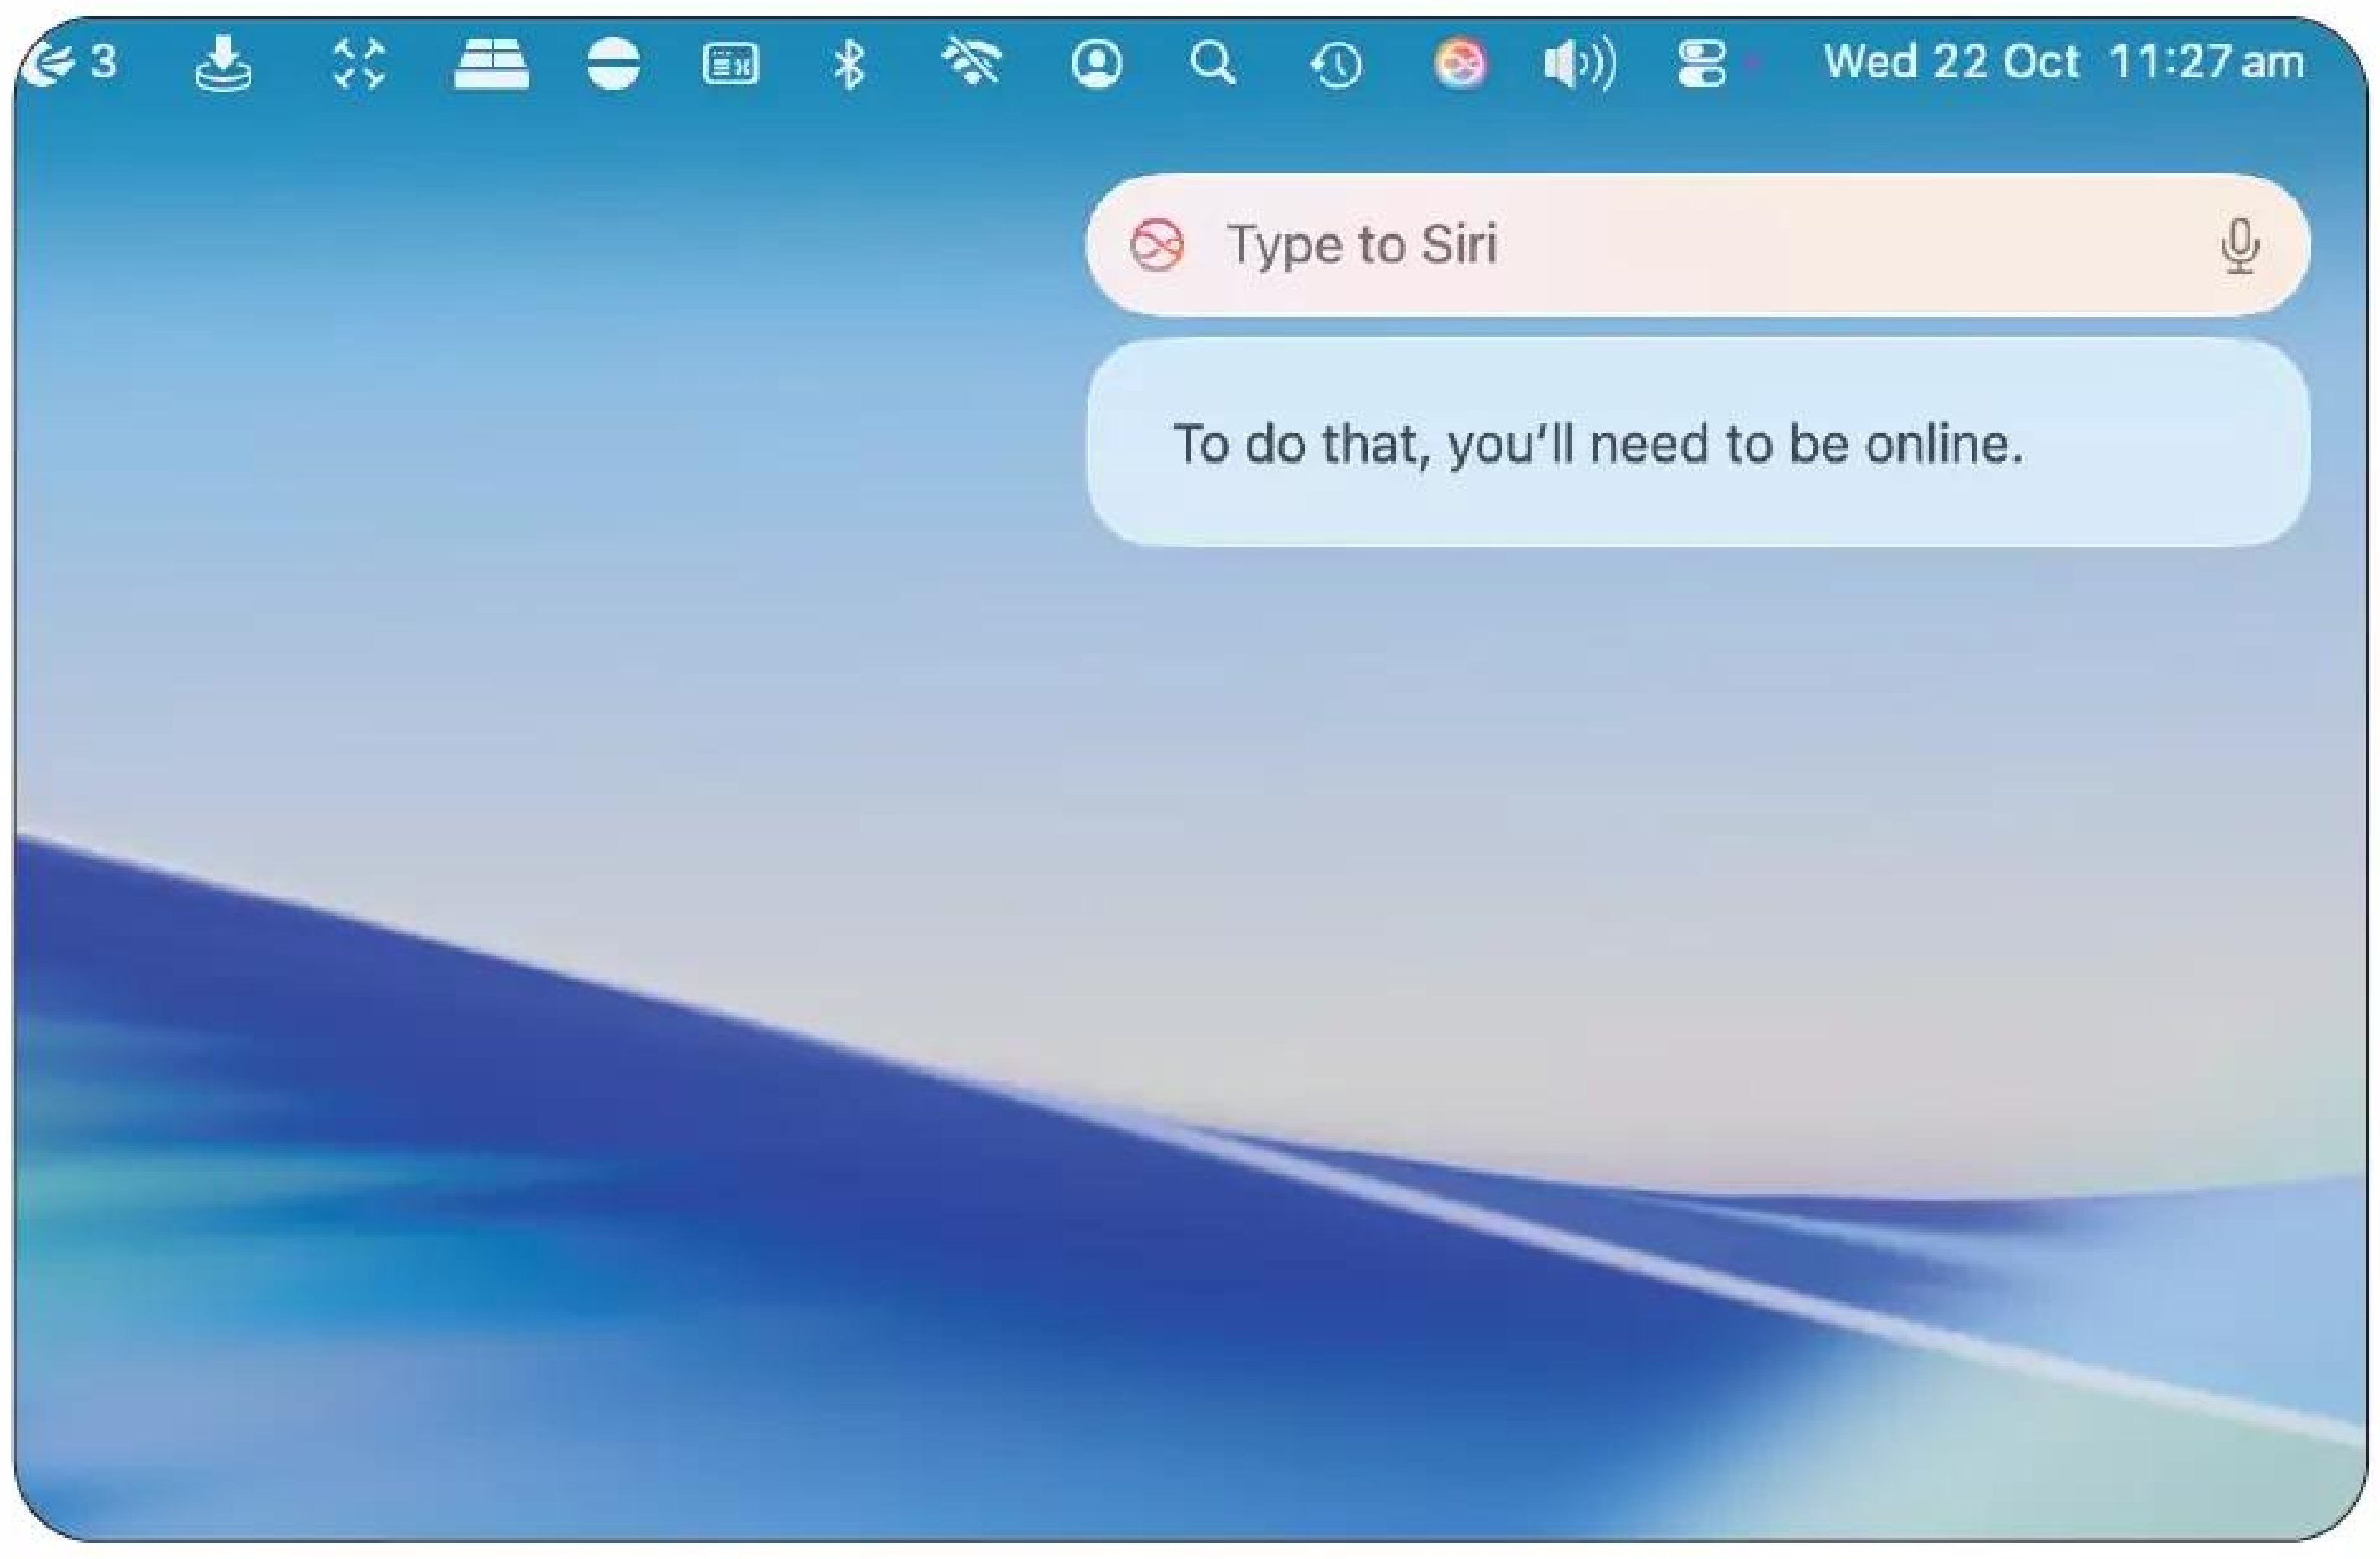
Apple Intelligence & Siri

2 You can change the language that Siri understands and also speaks in using the pull-down menu. You can also change the English language voice from a British male to a female voice and a different accent, and set up a keyboard shortcut for Siri if you wish.



Wed 22 Oct 11 26 am
Type to Siri

3 To launch Siri, click on the icon in the Dock, click on the menu bar icon if you've opted for one or press the keyboard shortcut, again if you have one set up. A Siri window appears in the top right corner of the screen.



Wed 22 Oct 11:27 am
Type to Siri

To do that, you'll need to be online.

4 Using some Siri services requires an Internet connection. If you don't currently have an active Internet connection, you cannot use Internet-based services using the Siri digital assistant until you take your Mac back online again.

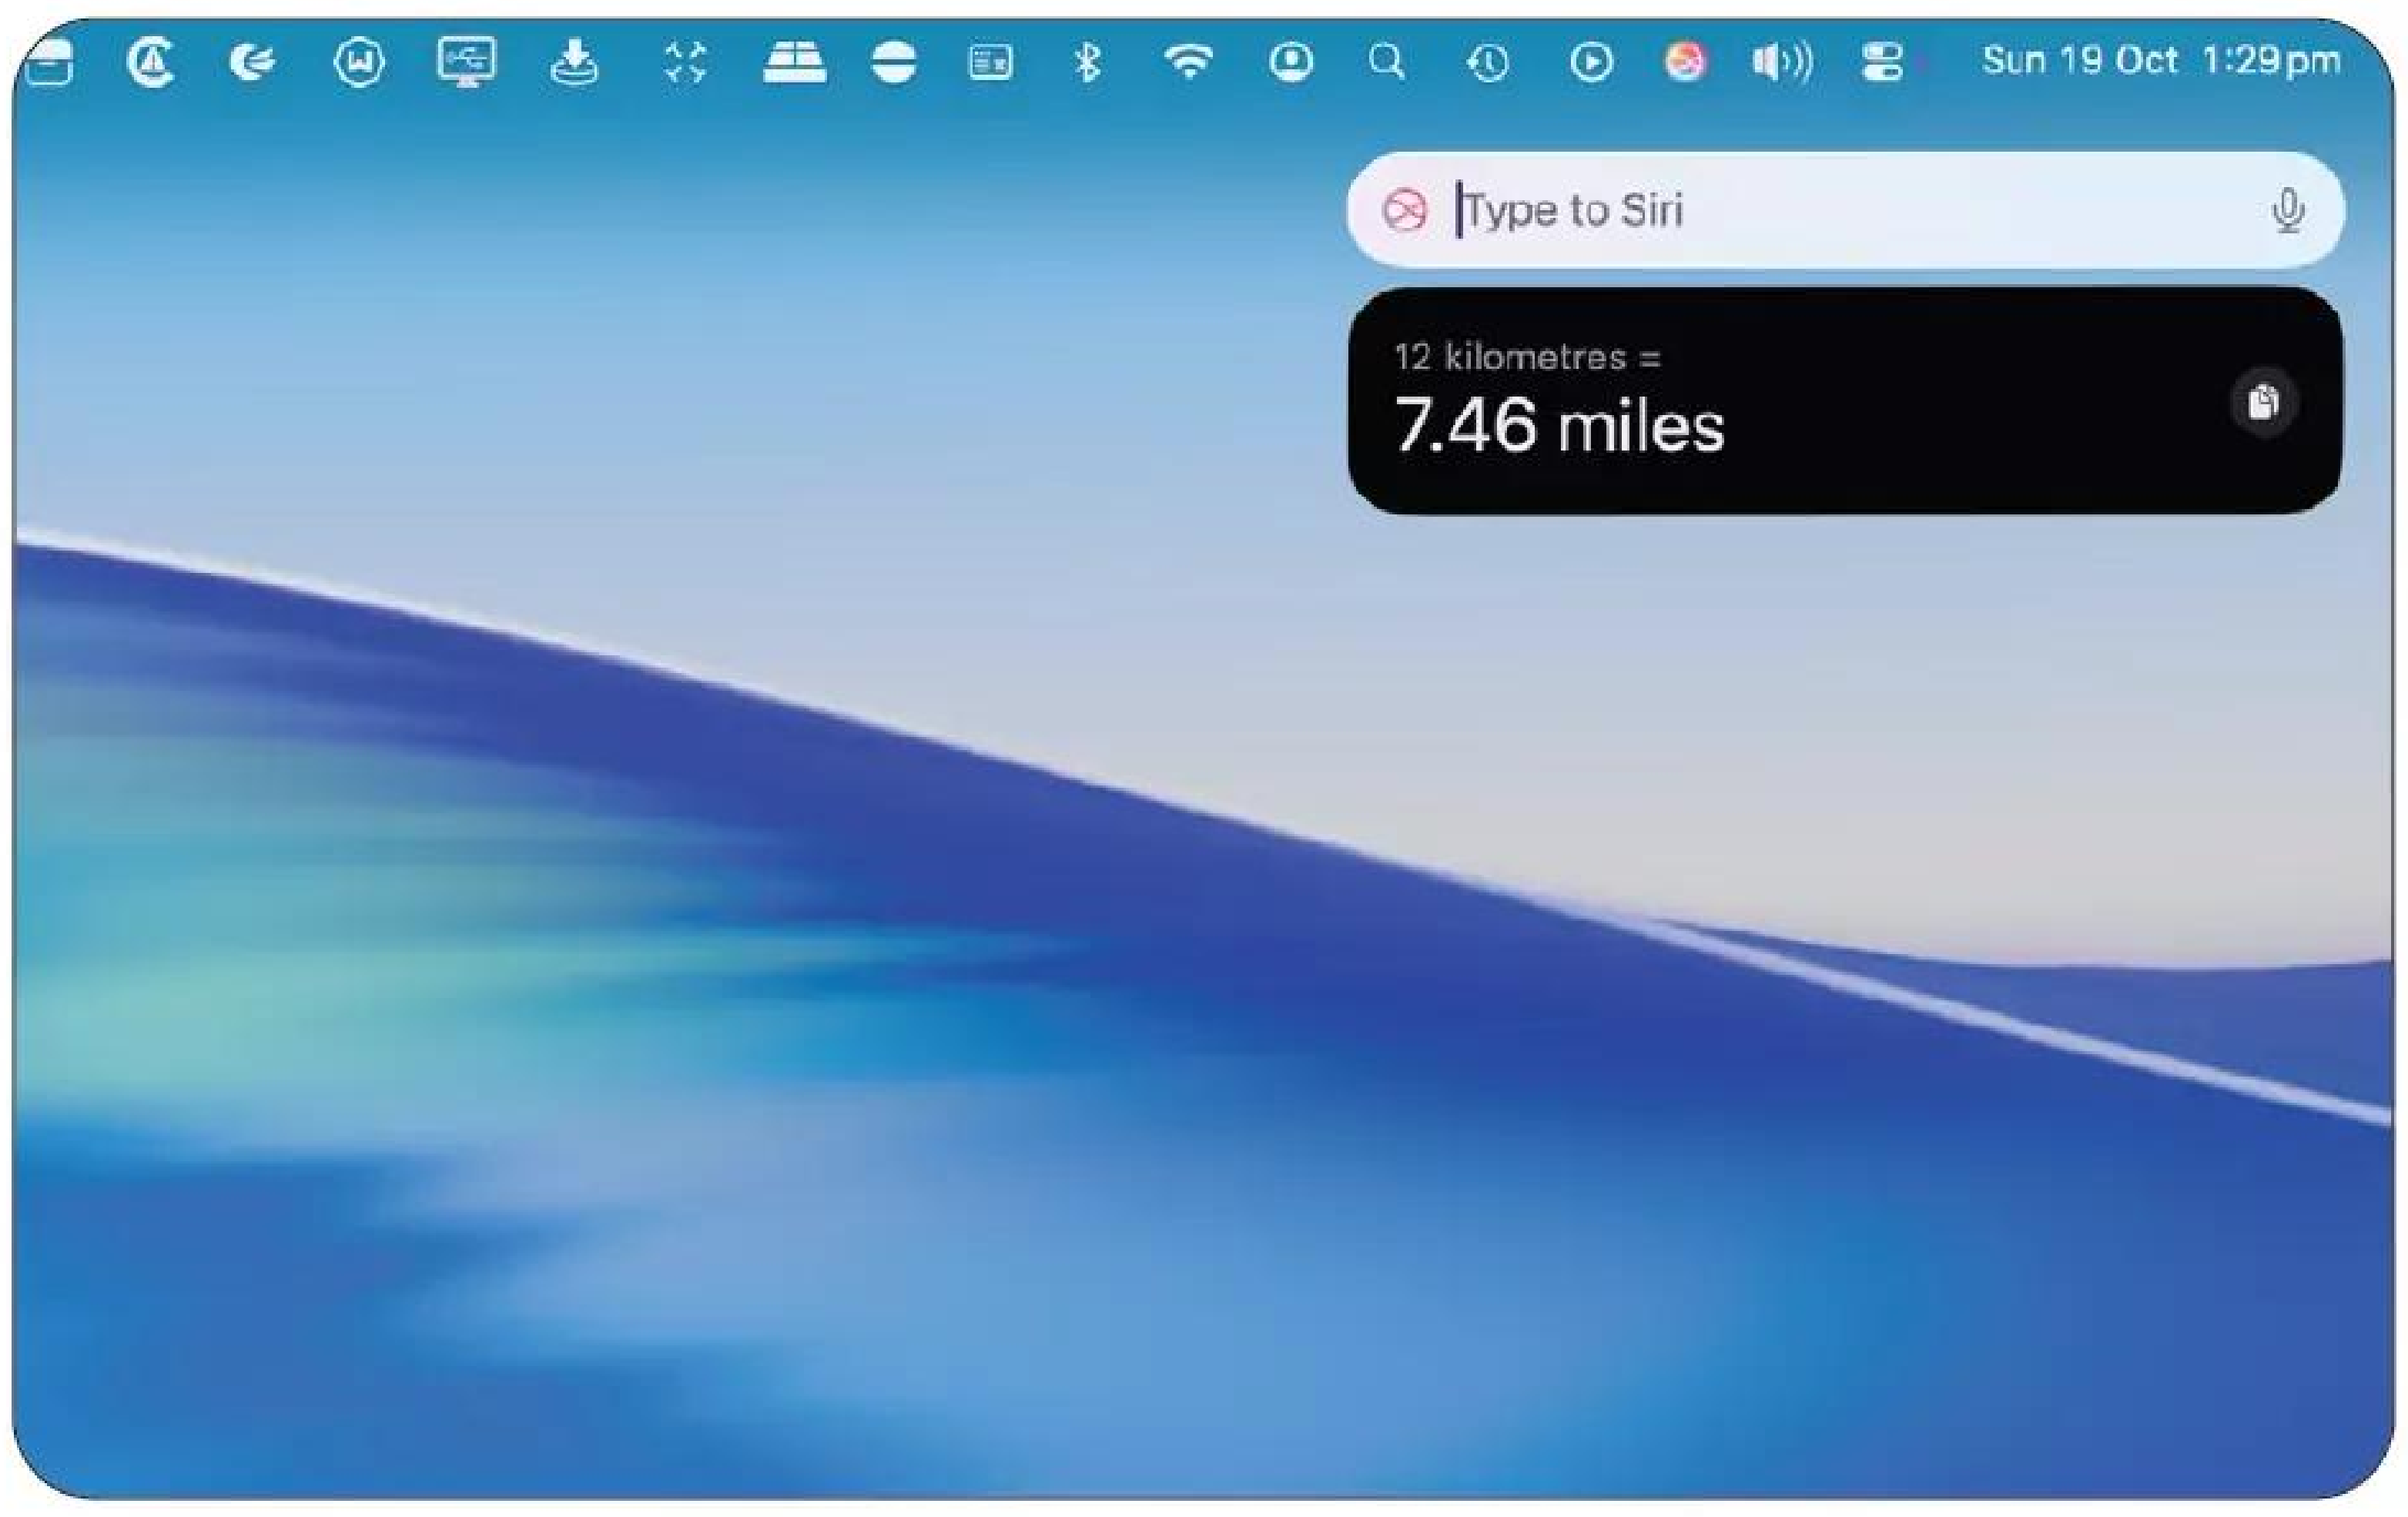
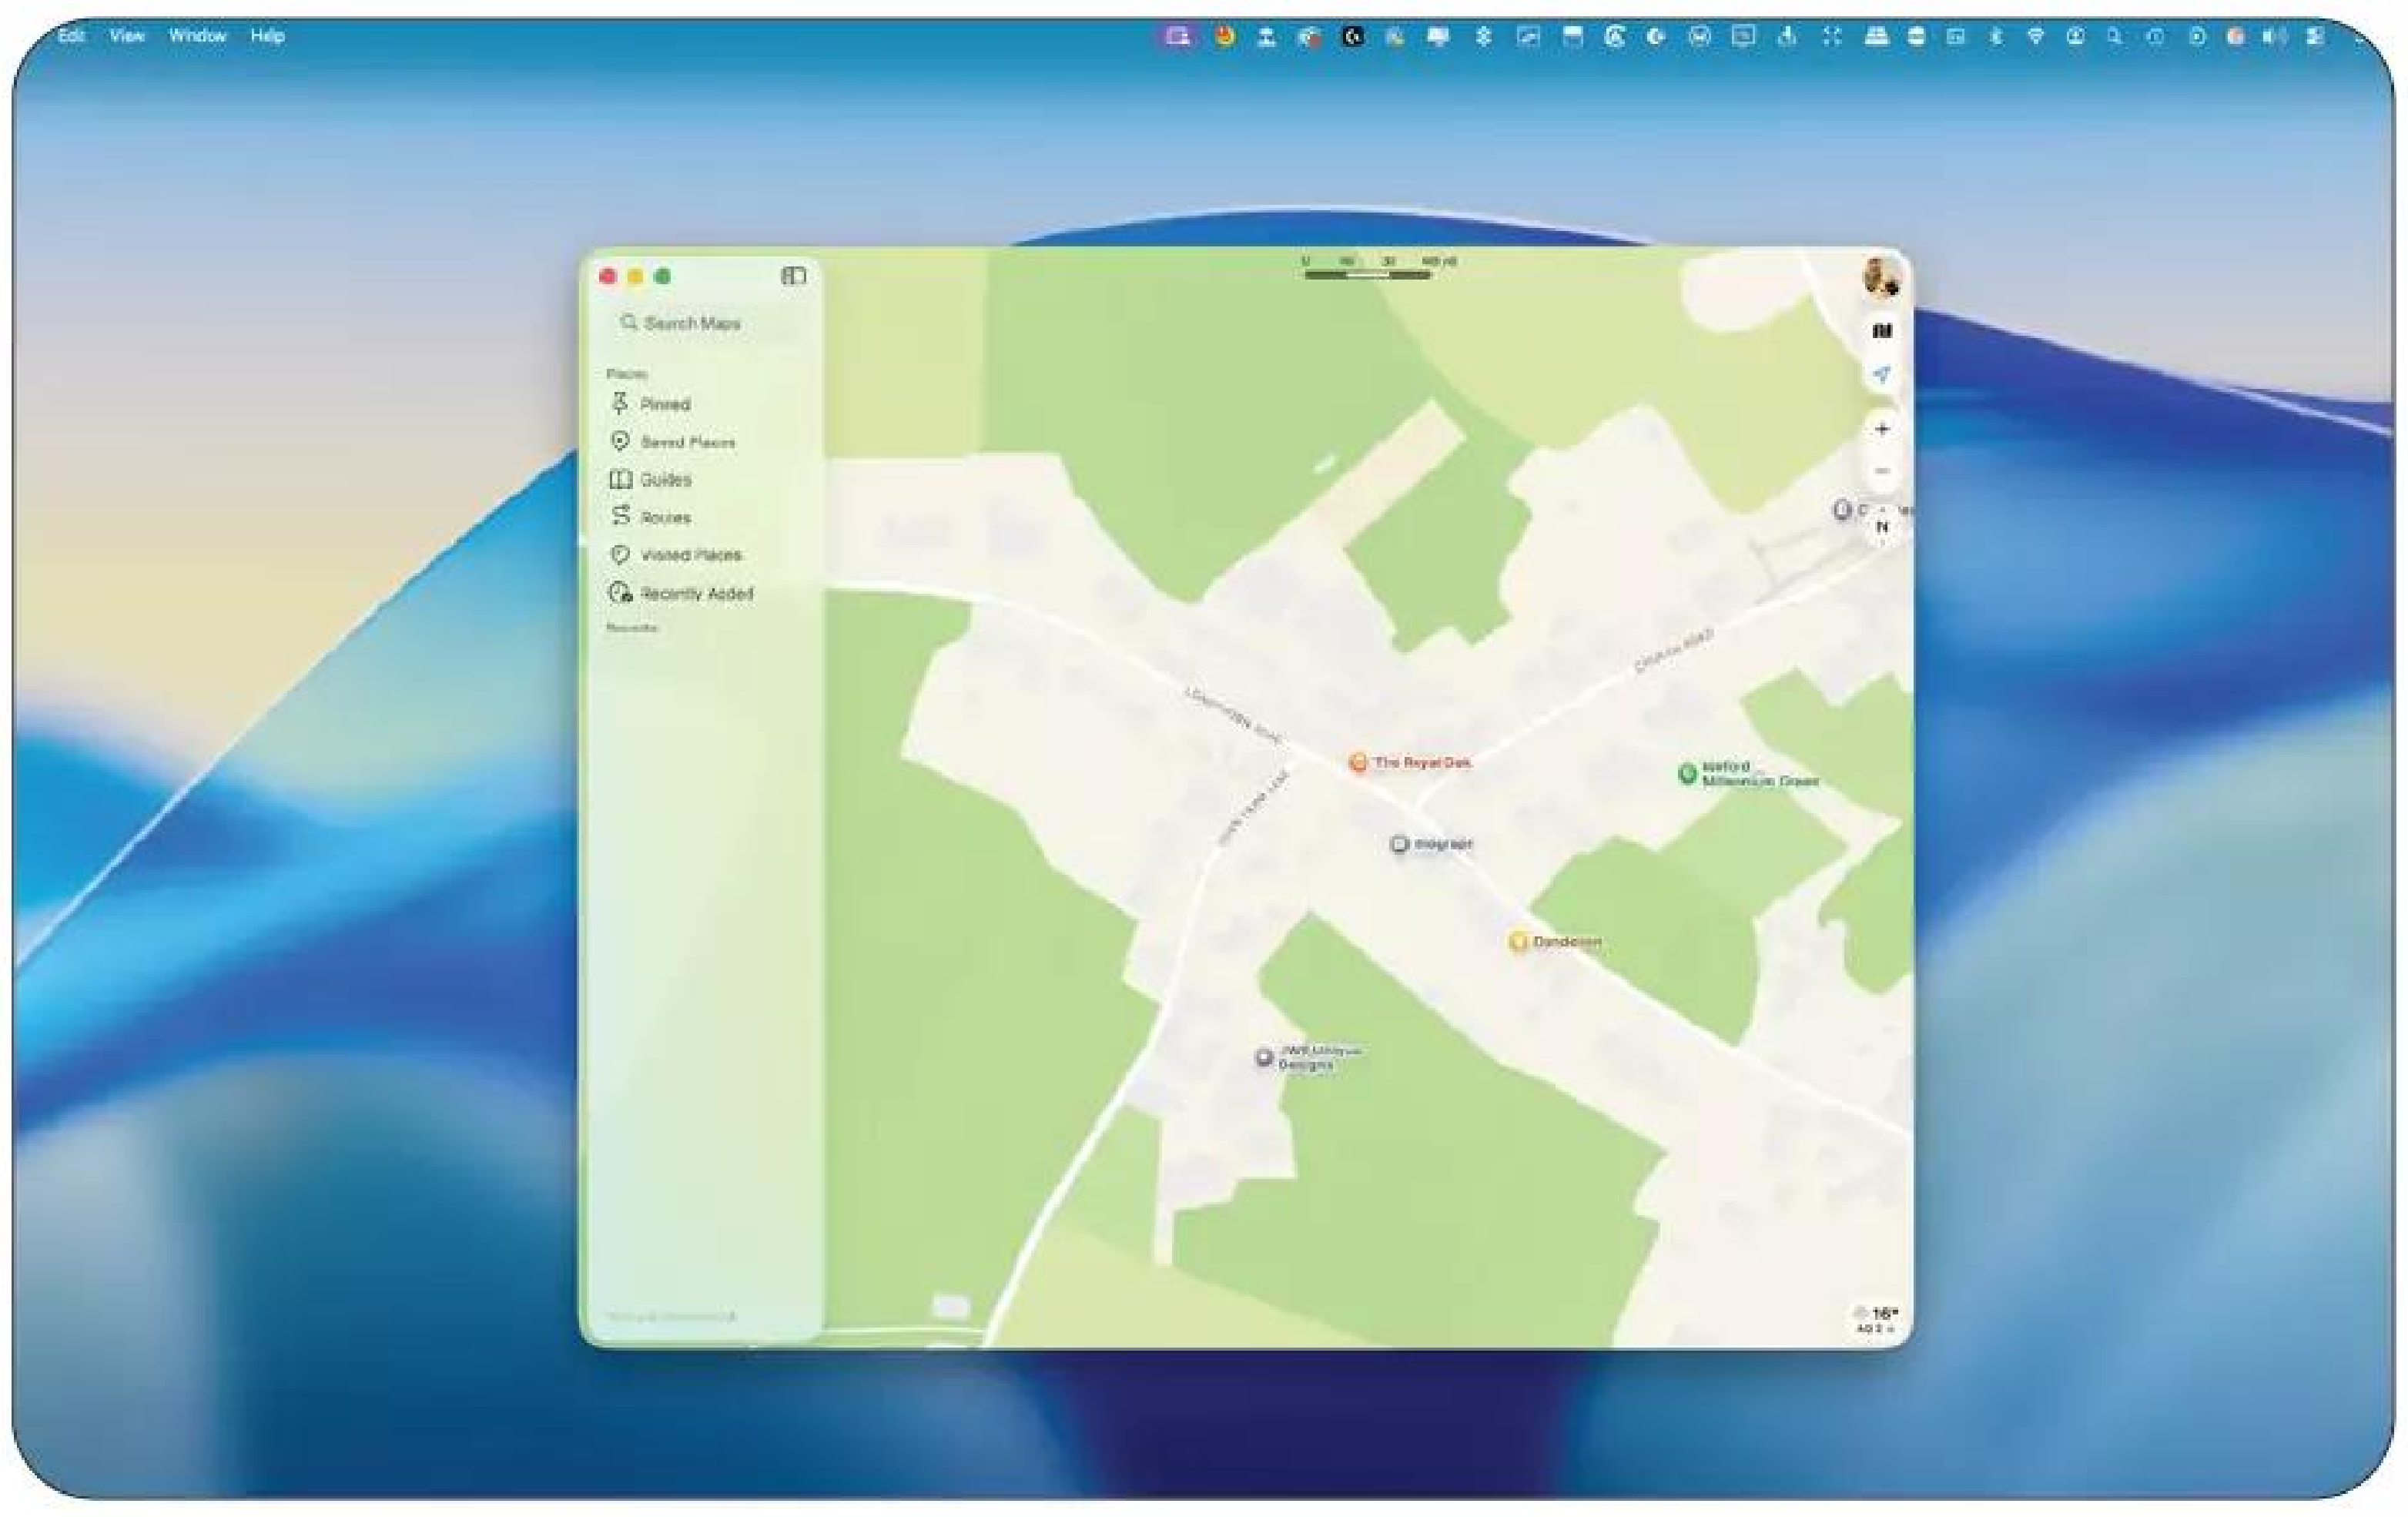
Messages

Check Appointments: Siri is great for checking your appointments. You can ask what appointments you have coming up for the rest of the week or month, what's coming up between two dates, and more. Just ask Siri a question in regular English and it will probably understand you perfectly.

Send a Message: You can send a message using Siri, instead of looking up the person in Contacts and then typing the message itself. Just say, "Send a message to X", and Siri will find the person and ask what you want to say. Speak your message and you can then check and send it.



12 kilometres =
7.46 miles



Conversions: You can use Siri to do conversions between weights, length, time, currencies and more. Just ask, for example, 'What is 12 kilometres in miles?', and Siri tells you. It's great for currency conversions when shopping online.

Open Apps: You can open an app with Siri. Just say, 'Open the [X] app', with 'X' being replaced by the name of the app in question. The app is then opened, without your having to use Launchpad. You can't close an app with Siri, though.

Siri Dictation Commands

Siri also understands dictation as well as words, so if you are dictating an email, for instance, this useful list of dictation commands that Siri recognises prove very useful. Just "speak the word" and the **action** or **punctuation** is added.

Live Translation on Your Mac

One of the most amazing features brought to us by Apple Intelligence is Live Translation. The world is getting smaller. The Internet has brought people closer together, and communication tools such as Apple's Messages, FaceTime and Phone apps mean we can talk to people all over the planet. But what if they speak different languages? That's what Live Translation is for...

What is Live Translation?

Live Translation is an exciting new feature powered by Apple Intelligence that translates languages in real time in the Mac apps Messages, FaceTime and Phone. You can talk naturally with someone who doesn't speak your language.

Live Translation in Messages

To enable Live Translation in the Messages app, open a conversation in which the other person is typing in another language, and click that person's avatar at the top. This opens a sidebar on the right. Scroll this sidebar up until you see Automatically Translate. Click it, and then choose the language in which the other person is speaking.

If this is the first time you've translated into or out of this particular language, it must be downloaded first. When it's ready, the other person's messages are instantly translated as they arrive. Your own messages are translated for the other person too, and the original language is shown above the translation. It's really a clever addition.

Enable in Phone

Start a call, and in the Phone app on your Mac, click the three-dots icon found in the phone call's window. Click on the Live Translation option, and then choose the language the caller is using and the language you want to translate it into. Click Start Translation to begin.

Now, when the person you're calling speaks in their own language, you get a spoken and text translation in your preferred tongue. The feature is available for one-on-one calls in English (UK, US), French (France), German, Portuguese (Brazil) and Spanish (Spain).

Live Translation in FaceTime

During a call, click the three-dots icon found in the bottom-right corner of the FaceTime window which appears when you drag your pointer over it. From the menu, select Live Translation. Then choose both your and your caller's preferred language, and click Start Translation to begin.

With Live Translation active, whatever the person on the other end of the video call says is translated into your own tongue, and offered as a caption. So you can hear your relative, friend or business contact speak in their own language, and read what they said in yours.

Live Translation with AirPods

If you're lucky enough to own a set of AirPods Pro 3, you can use them for Live Translation as well as listening to your sounds. When you're talking face to face with someone who doesn't speak the same language as you, just pinch the step of both your earbuds at the same time. This new gesture activates Live Translation. Active Noise Cancellation lowers the volume of the person speaking, so you can hear the real-time translation of what they're saying through your AirPods.

When you speak, your iPhone translates what you say into their language for them to read, or you can have it spoken out loud by tapping the Play icon. Of course, if both parties are wearing AirPods Pro 3, there's no need; you can just talk to each other, just like you were speaking the same language.

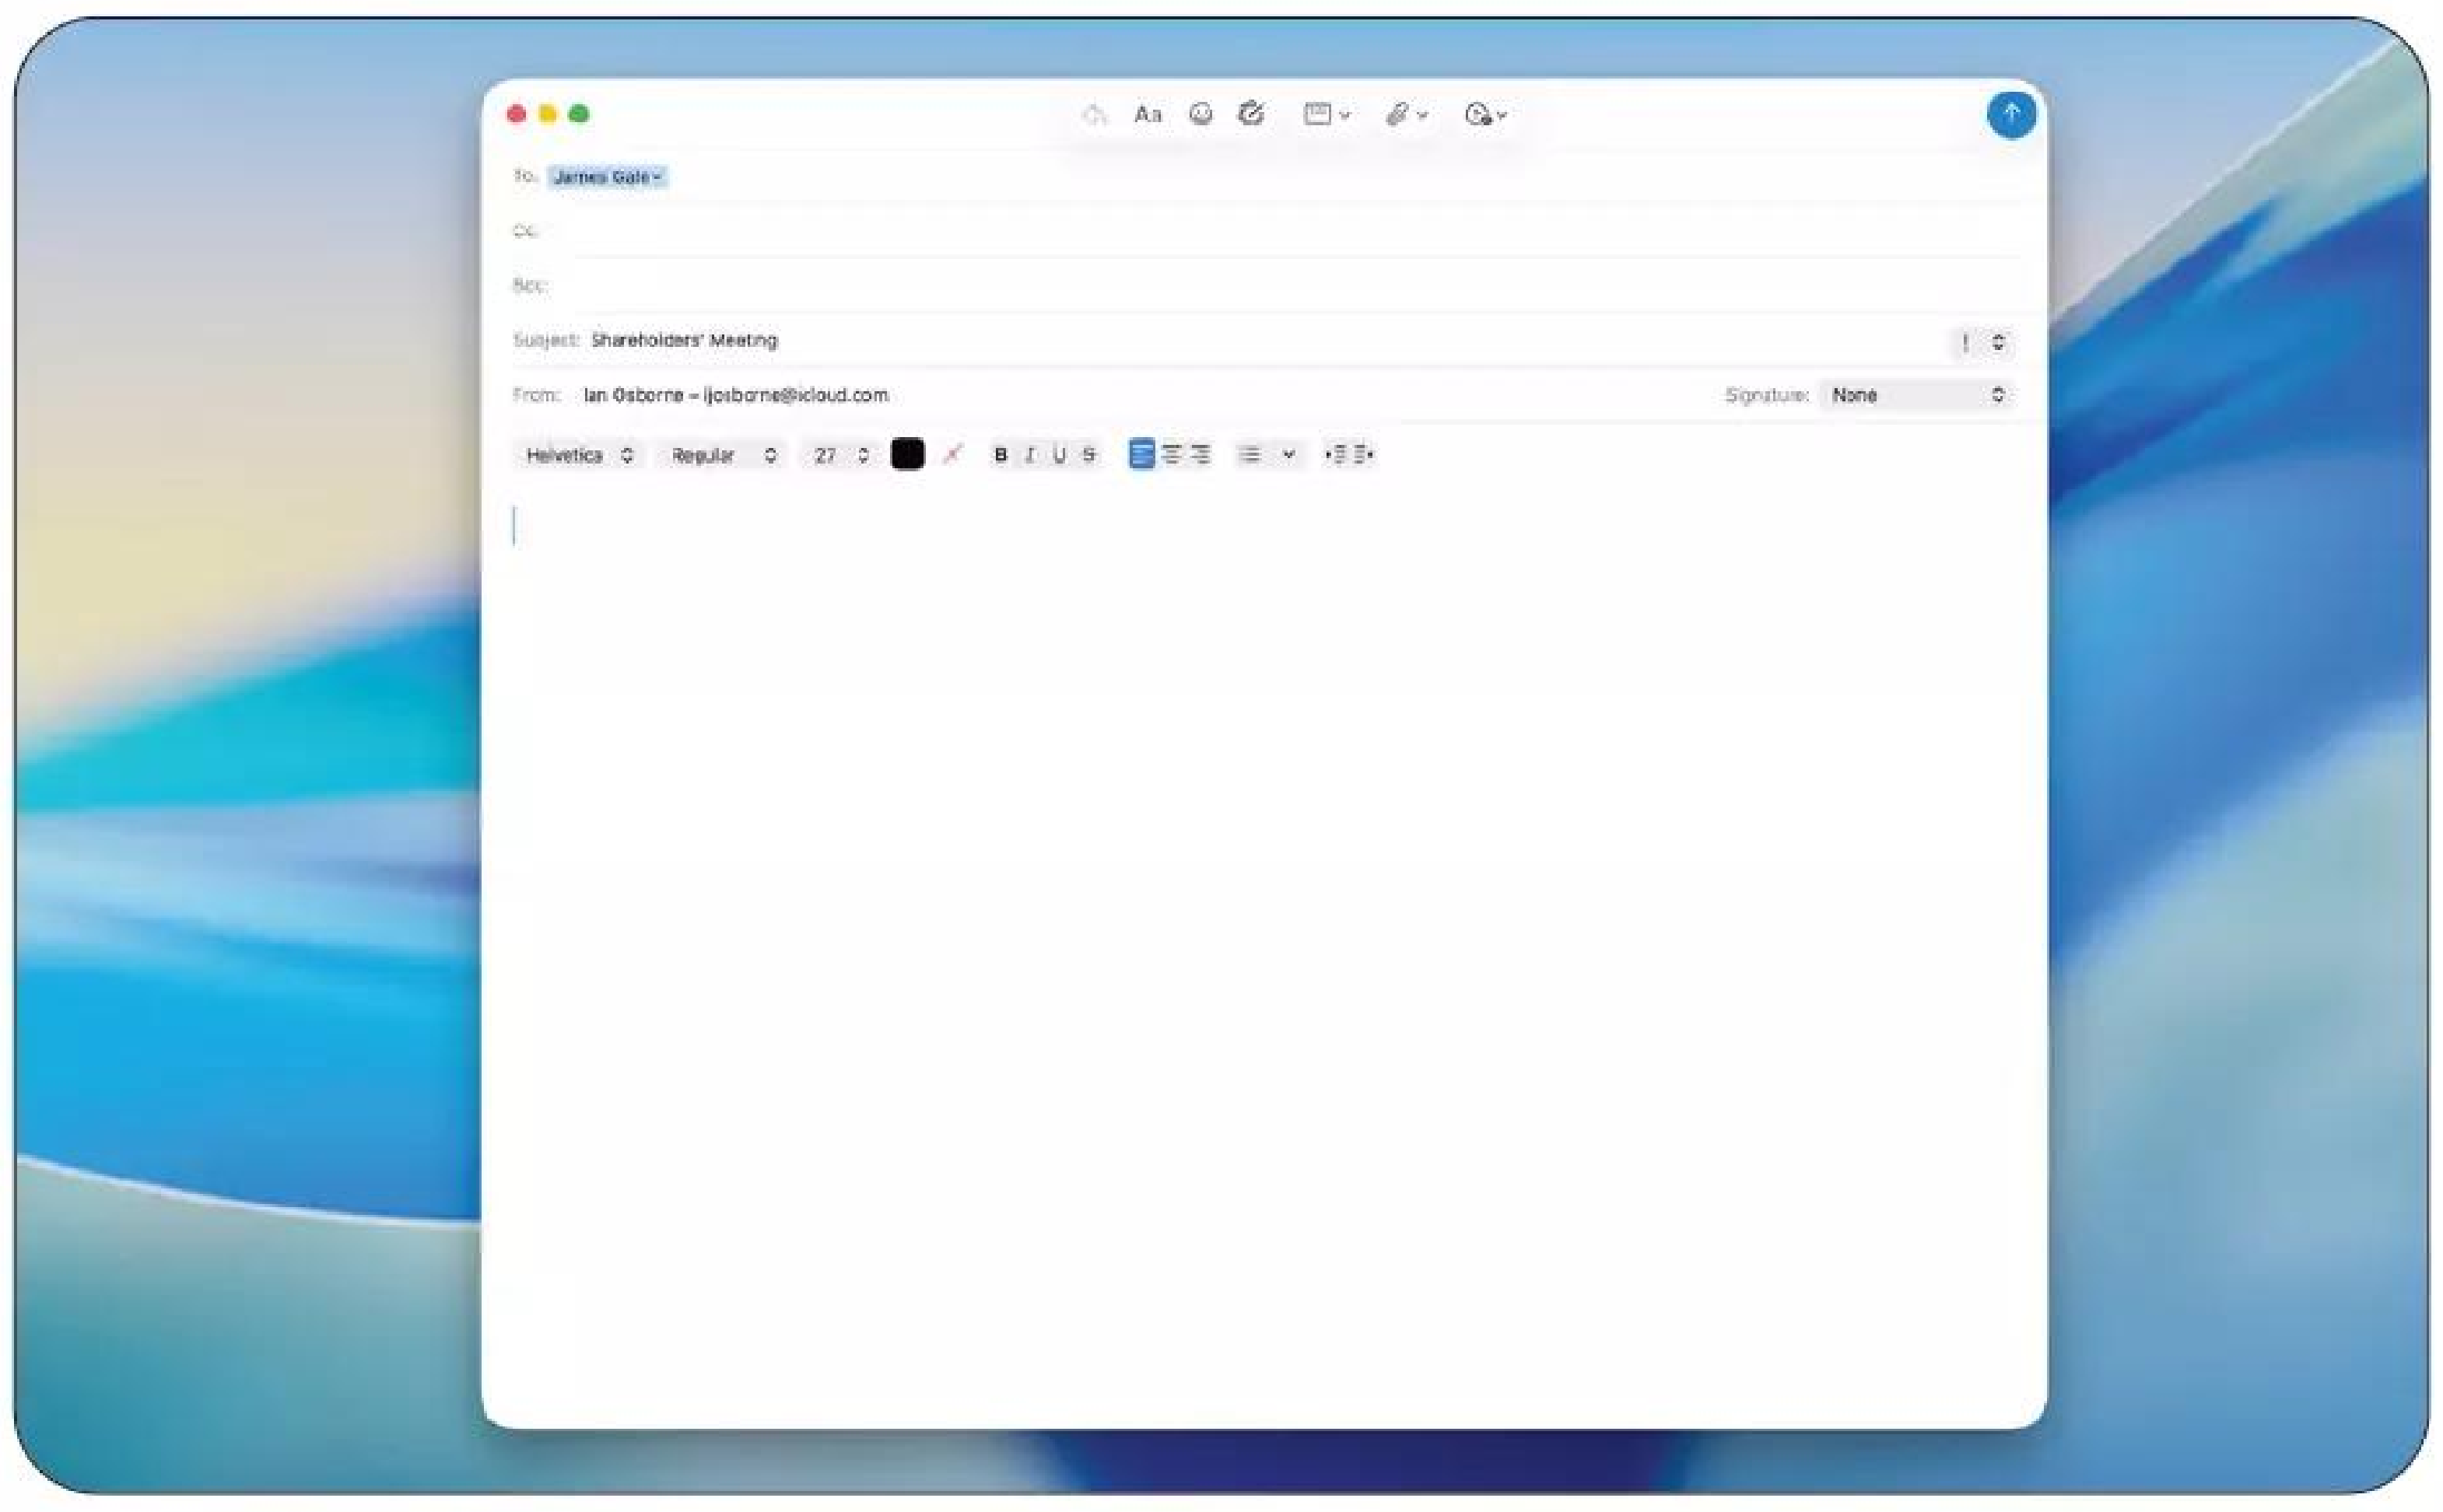
Writing Tools with Apple Intelligence

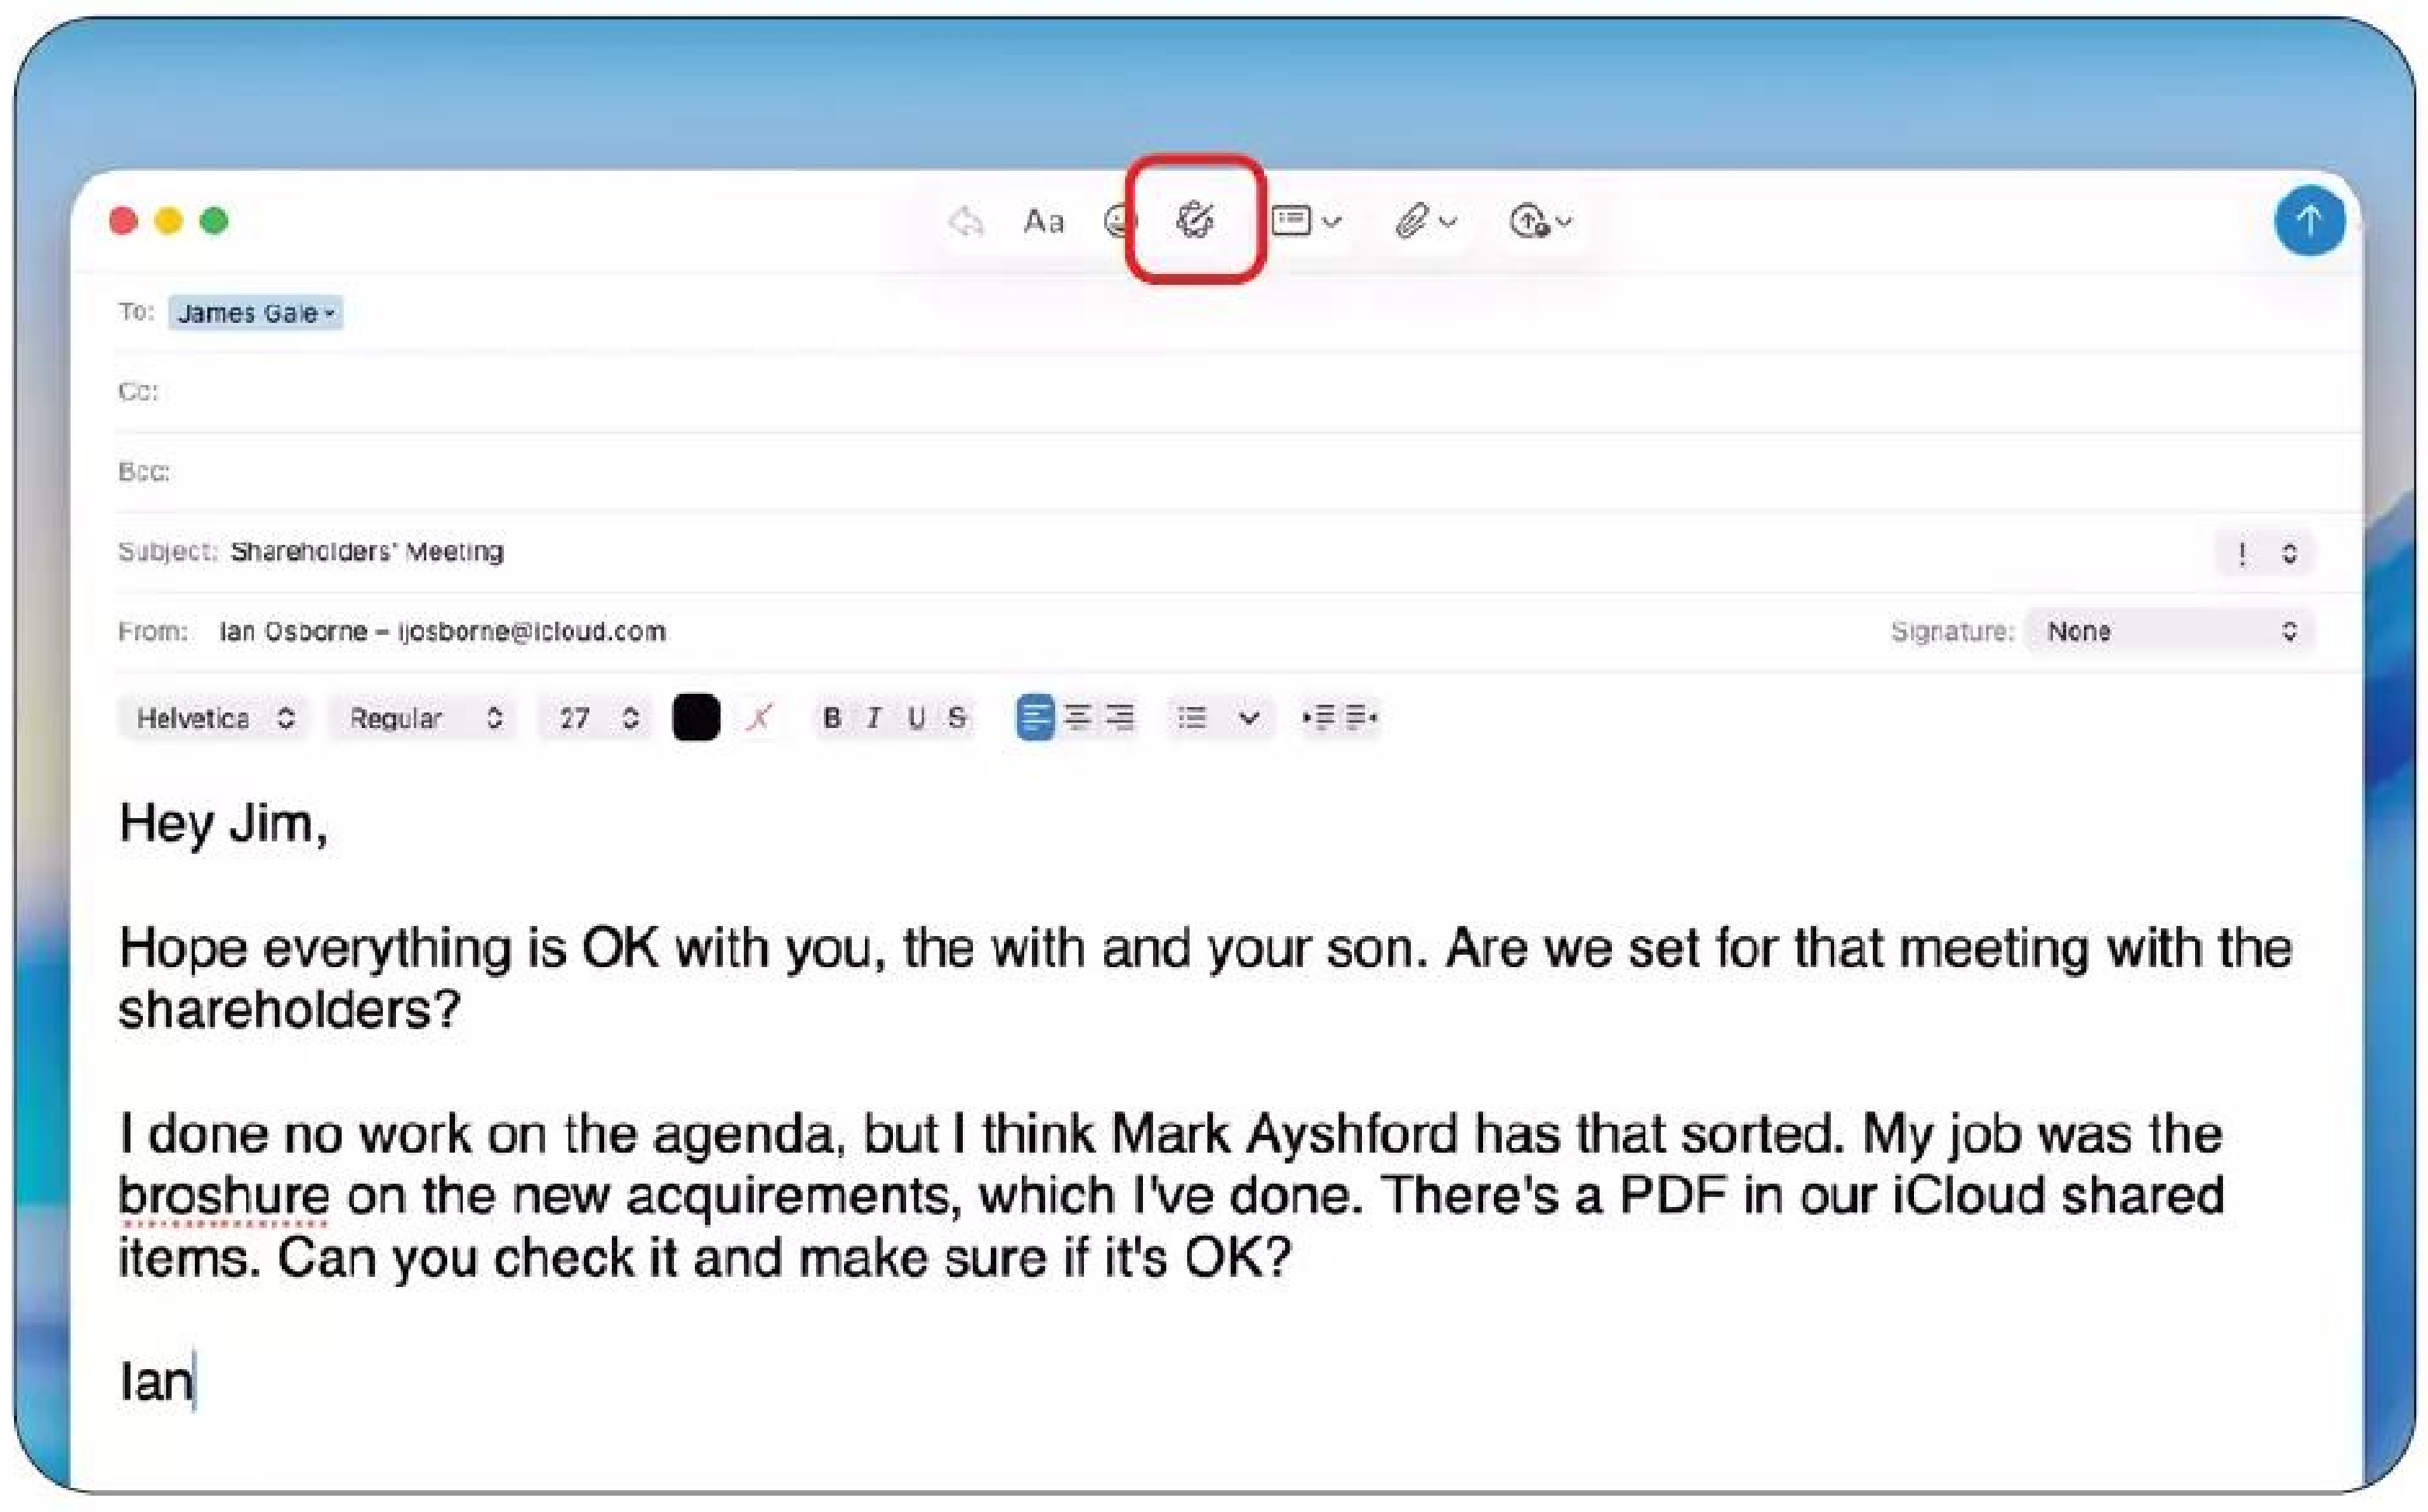
The Apple Intelligence Writing Tools feature lets you refine your writing in bigger ways than merely checking the spelling. You can use it to proofread your words, checking grammar and syntax as well as spelling, and also revise it to make (say) an email more businesslike or friendlier. Let's look at its key features and how it will change how you use Mail, Notes and Messages.

Using Writing Tools



To: James Gale
Cc:
Bcc:
Subject: Shareholders' Meeting
From: Ian Osborne – ijosborne@icloud.com
Signature: None

1 Writing Tools can be used almost anywhere in macOS where you can write. Here we're using it in the Mail app, but you can also use them in Pages, Notes and more. First of all, you need to write something. Writing Tools cannot (yet) generate original text for you, but it can revise text you've written.



To: James Gale
Cc:
Bcc:
Subject: Shareholders' Meeting
From: Ian Osborne – ijosborne@icloud.com
Signature: None

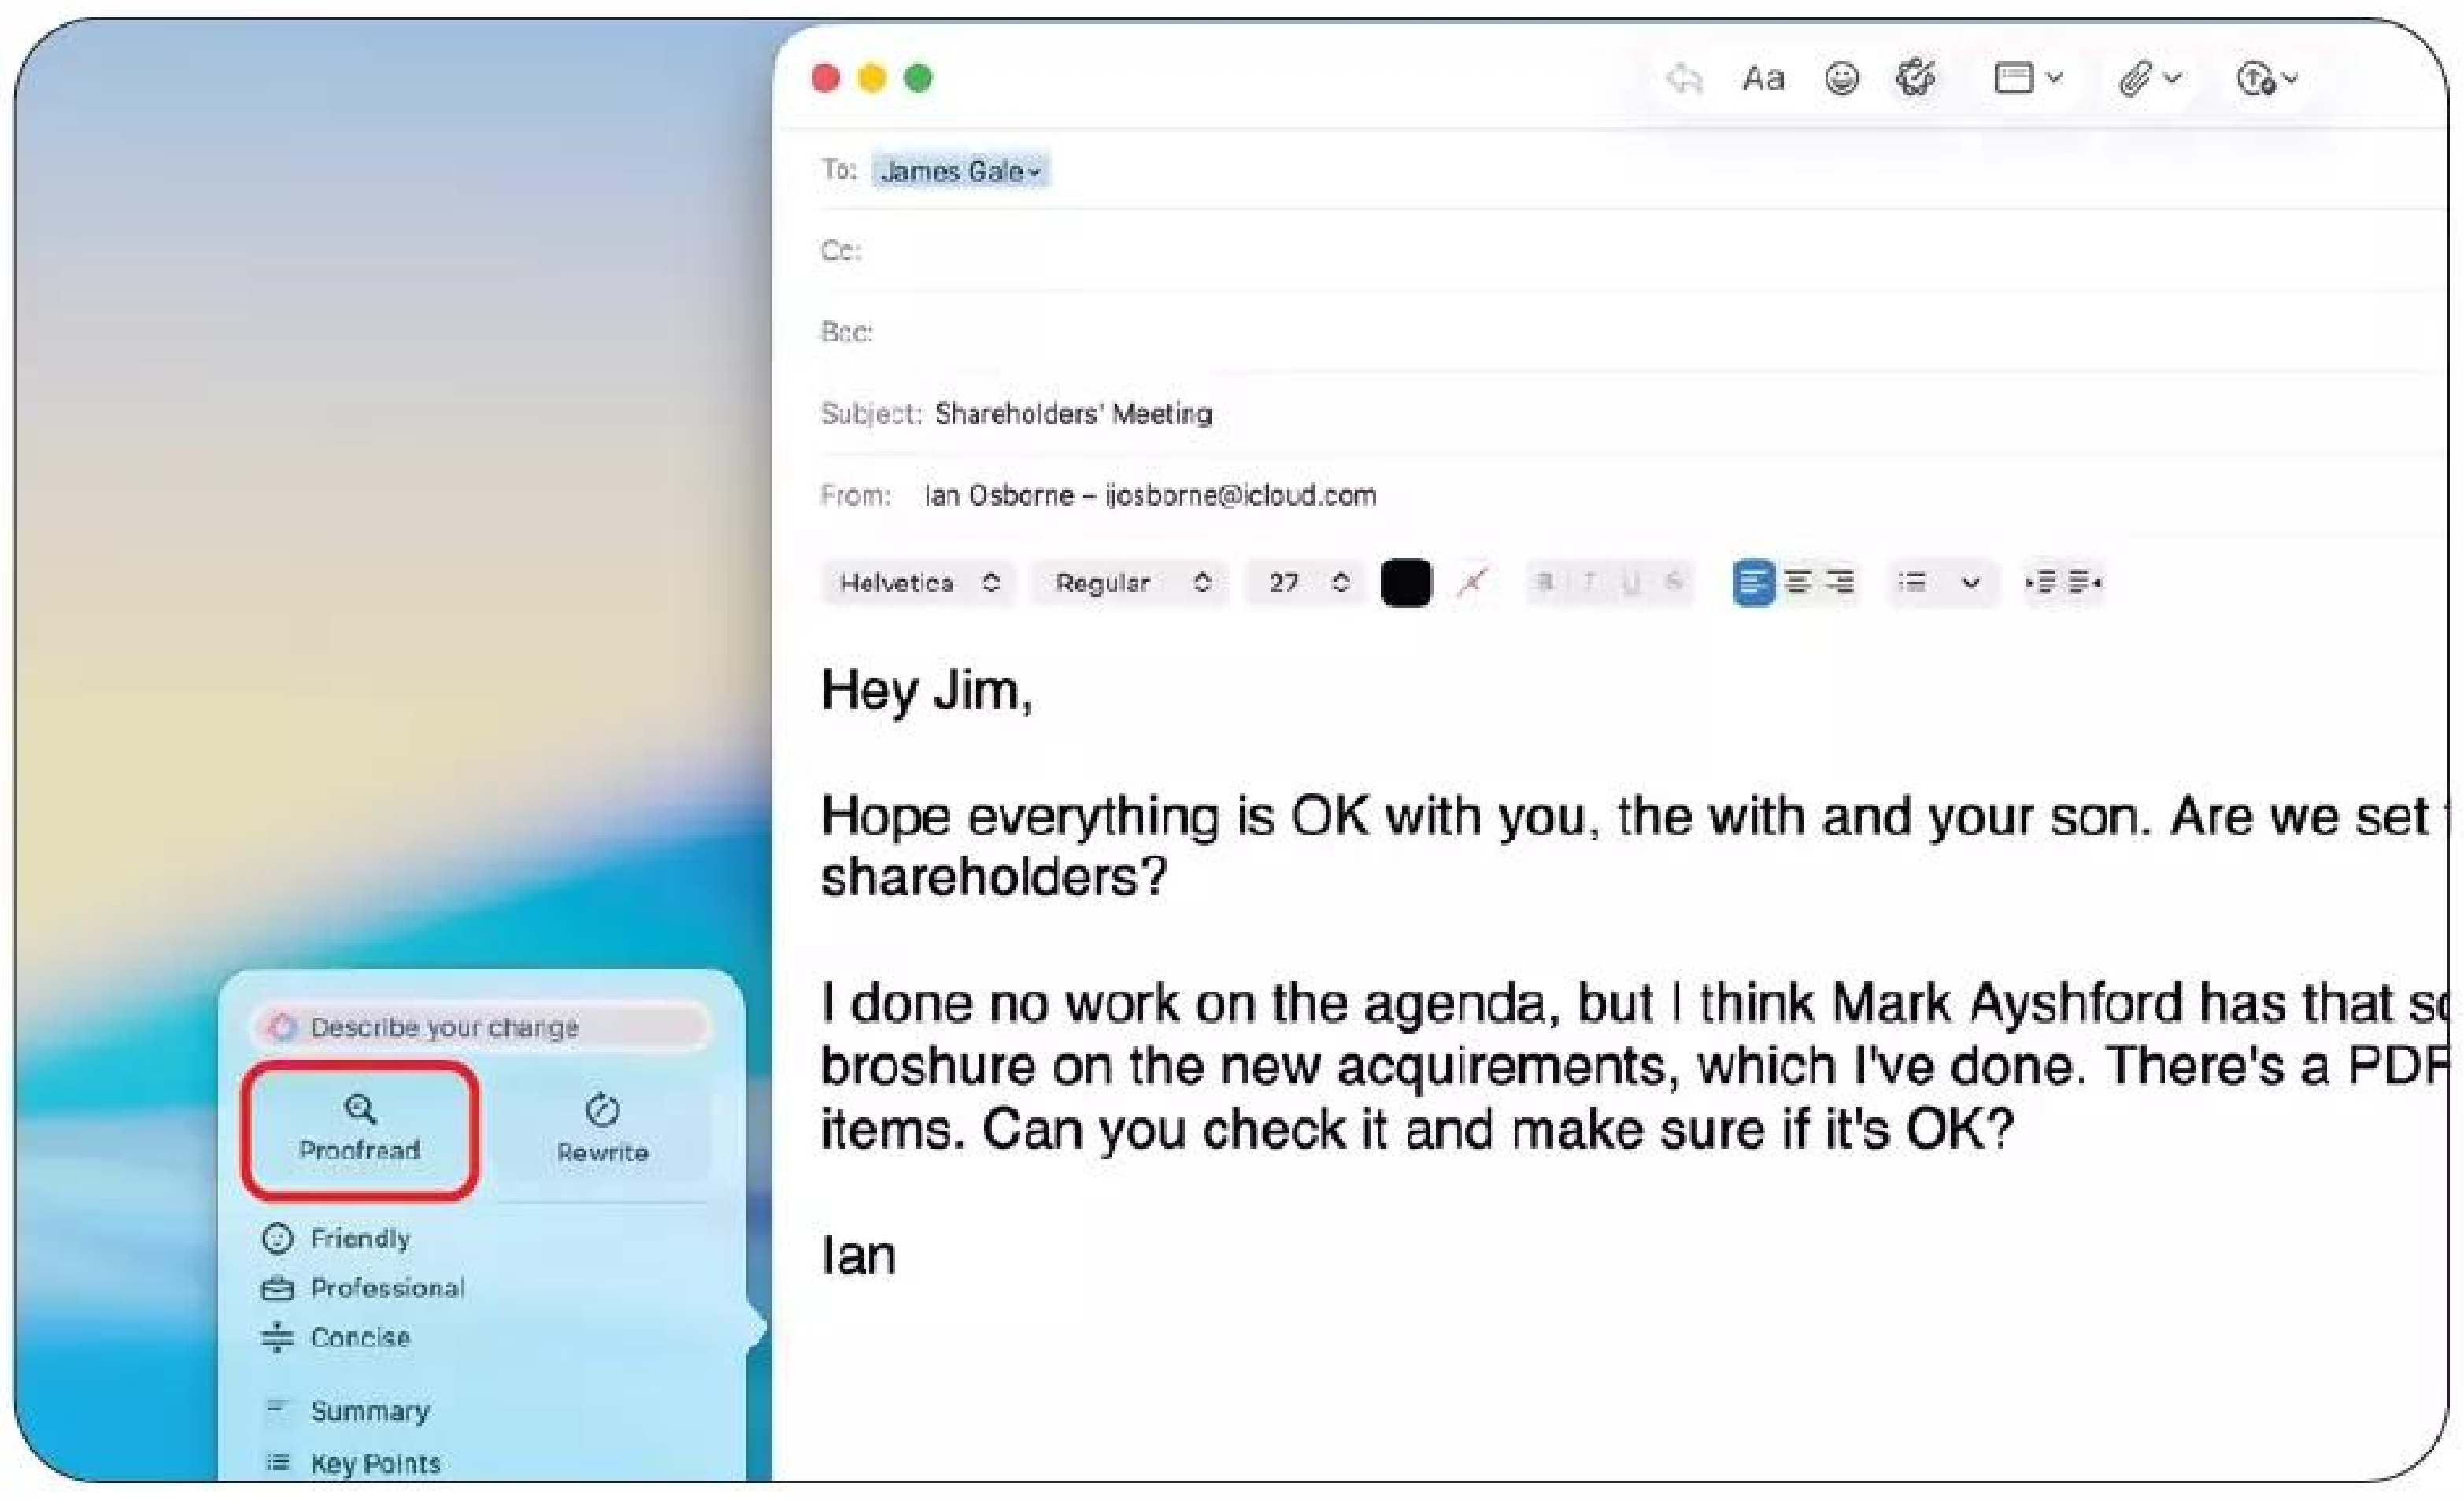
Hey Jim,

Hope everything is OK with you, the with and your son. Are we set for that meeting with the shareholders?

I done no work on the agenda, but I think Mark Ayshford has that sorted. My job was the broshure on the new acquirements, which I've done. There's a PDF in our iCloud shared items. Can you check it and make sure if it's OK?

Ian

2 When you've finished your first draft of whatever it is you're writing (here, it's an email), tap the Writing Tools icon which is found in the toolbar at the top of the email window. This brings up the Writing Tools window, from where you can choose how to manipulate your piece of text.



To: James Gale
Cc:

Subject: Shareholders' Meeting
From: Ian Osborne – ijosborne@icloud.com

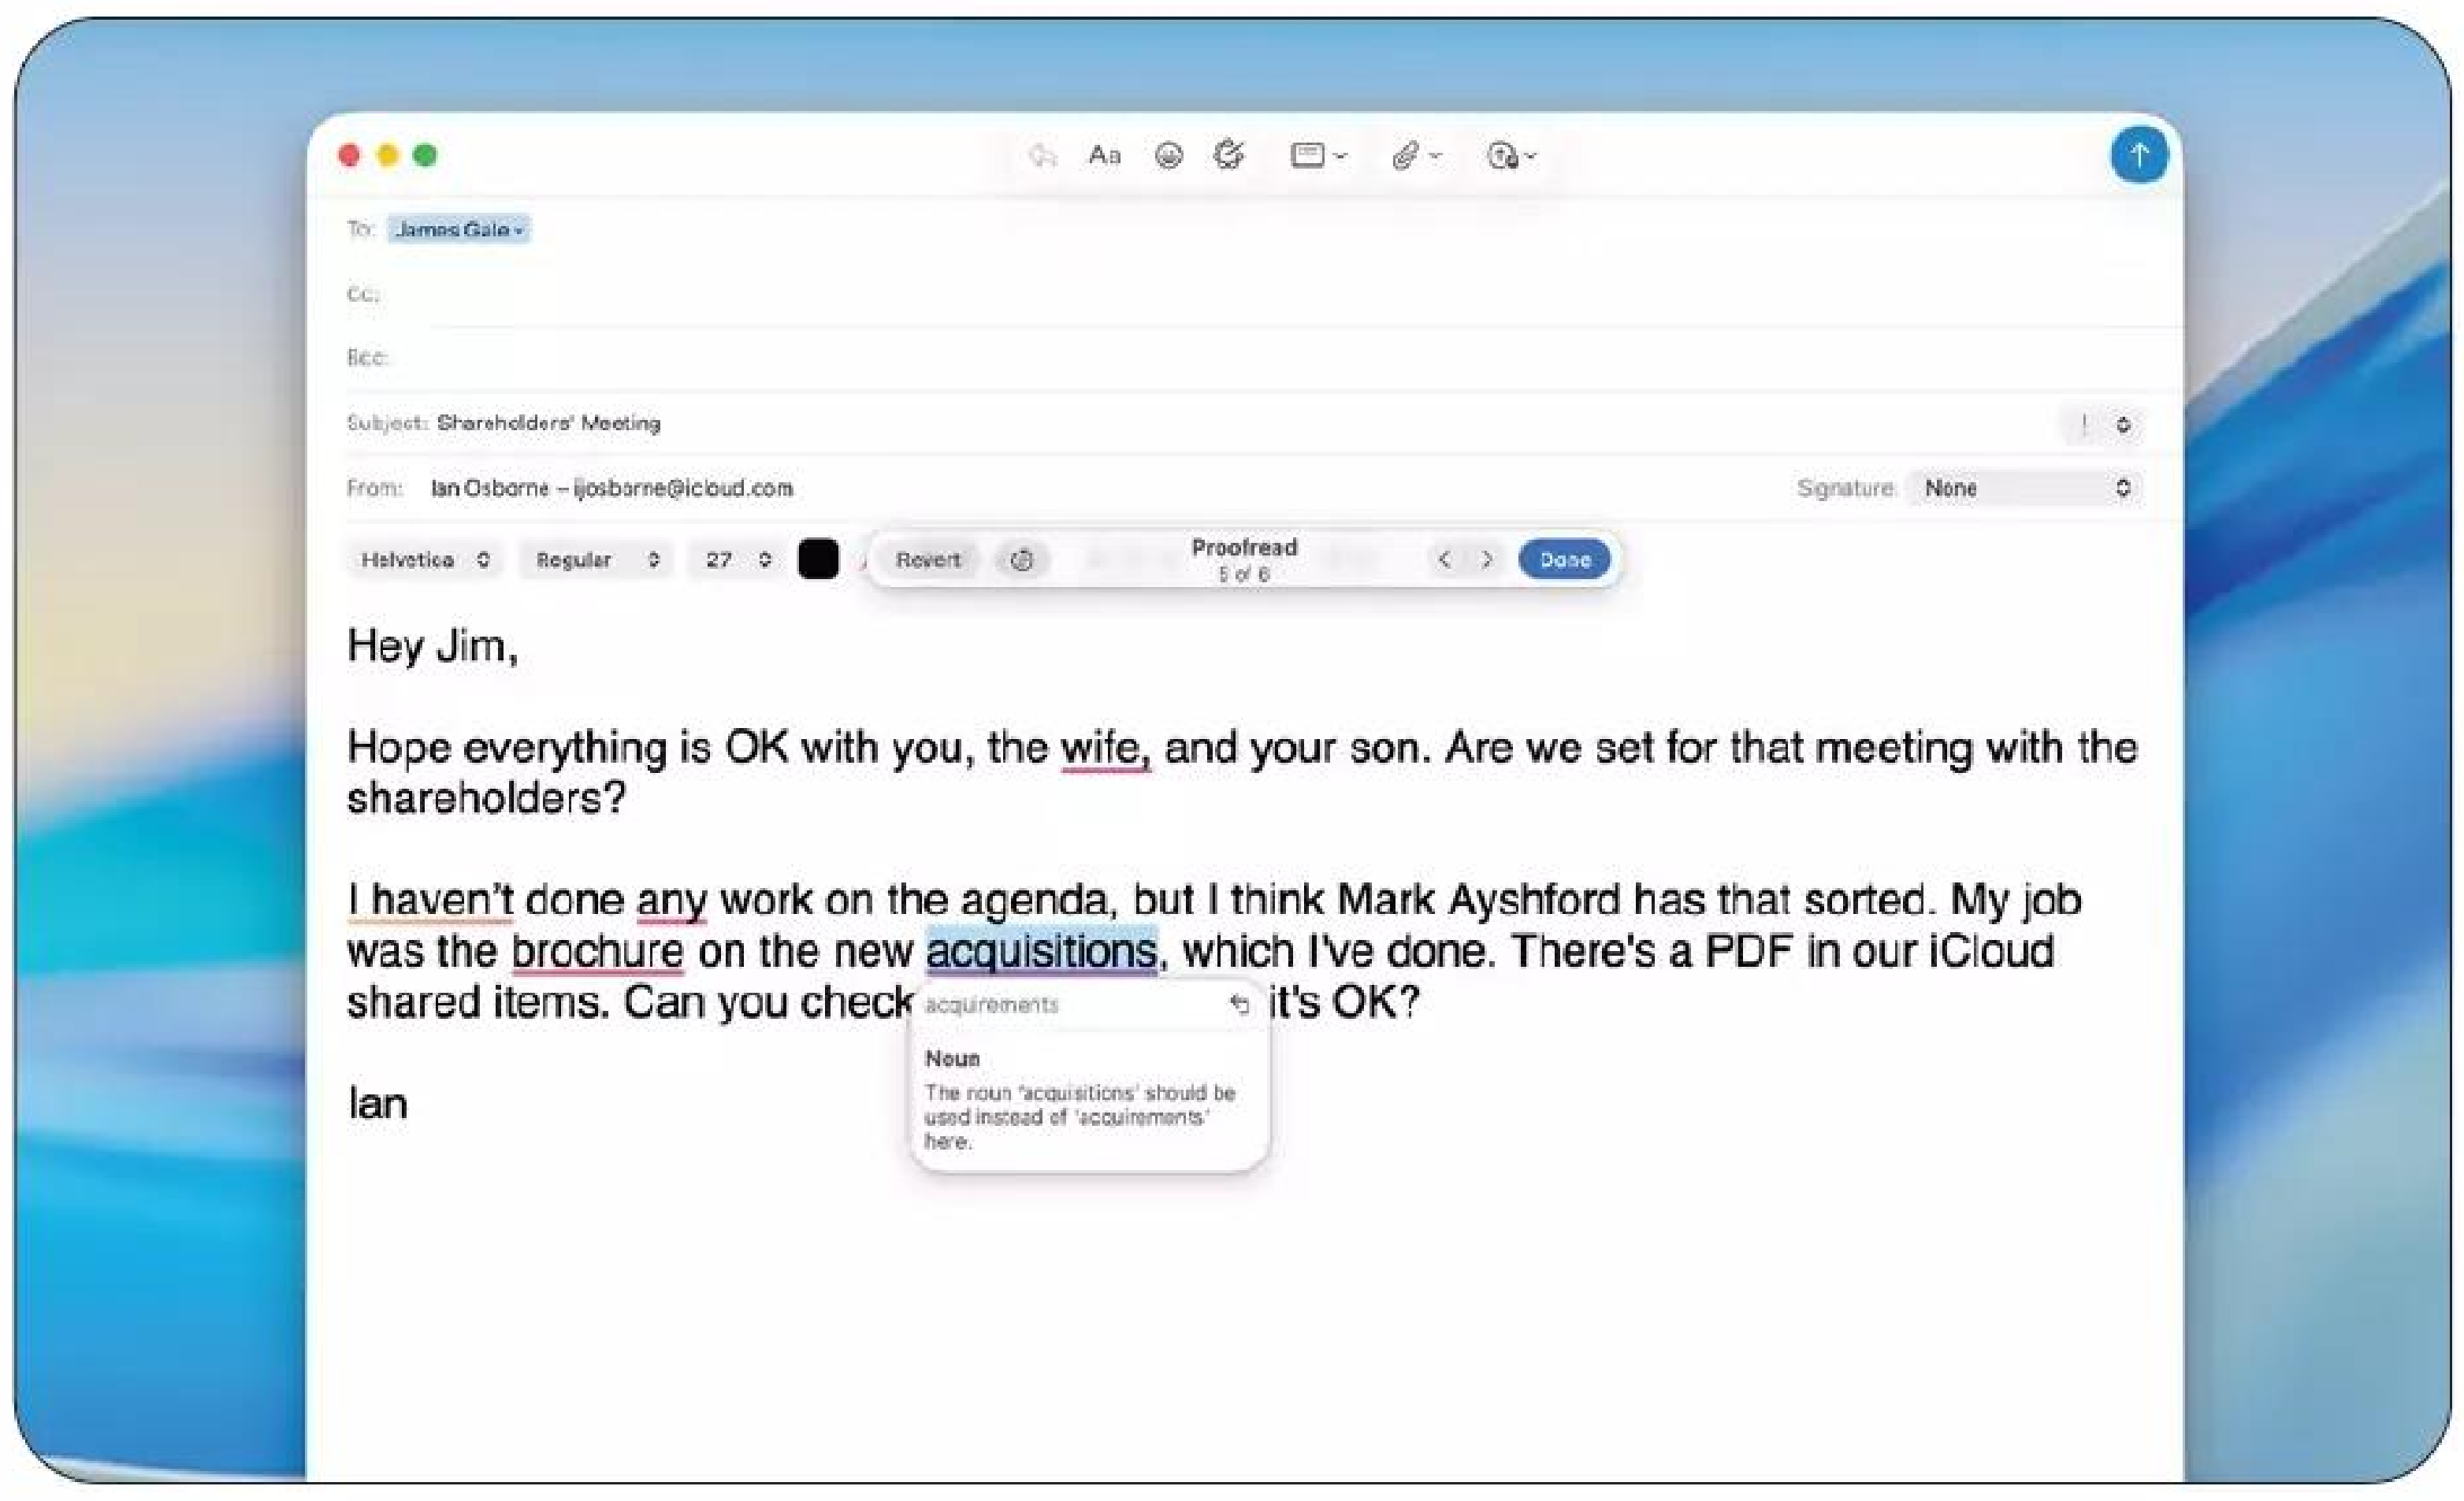
Hey Jim,

Hope everything is OK with you, the with and your son. Are we set
shareholders?

I done no work on the agenda, but I think Mark Ayshford has that s
broshure on the new acquirements, which I've done. There's a PDF
items. Can you check it and make sure if it's OK?

Ian

3 First of all, we'll use the Proofread option. There are plenty of errors in our original email. Tap the Proofread button in the Writing Tools window, and Apple Intelligence reviews what you have written, correcting spelling and grammatical errors and generally tidying up your written text.



To: James Gale

Hope everything is OK with you, the wife, and your son. Are we set for that meeting with the shareholders?

I haven't done any work on the agenda, but I think Mark Ayshford has that sorted. My job was the brochure on the new acquisitions, which I've done. There's a PDF in our iCloud shared items. Can you check it's OK?

Ian

acquirements

Noun

The noun 'acquisitions' should be used instead of 'acquirements' here.

4 When it's finished, you can review the changes, which are underlined. Click on an underlined correction and you're told what was wrong in a pop-up window. If Writing Tools has made a mistake, you can revert to the original by clicking the curly arrow in that window's top-right corner.

Done

Hey Jim,

Hope you and your family are well. Are we ready for the shareholders' meeting?

I haven't worked on the agenda, but Mark Ayshford has it. I've completed the brochure on the new acquisitions, which is in our iCloud shared items. Please check it.

Ian

7 The Concise option shortens what you've written, while keeping the main points intact. If you tend to ramble, and use far too many words, this is an excellent tool to keep your writing in check and the message simple.

Notes on Our Cat

#Millie #cats

We got our cat (Millie) from the Animals in Distress rescue centre in Ipplepen. We got her in April 2021,
was 18 years old, so she's now 20, but still sprightly and fit. She's nursing a leg injury at the moment. W
sure how she did it, but we think she wrenched her back, limiting movement in her back leg. We've got h
Metacam, and she's much better now, but still a little wobbly at times.

9 You can use Writing Tools in other apps where you write too. Just look for the Writing Tools icon; the circular Apple Intelligence symbol with a pen in it. Here it is in the Notes app.

ChatGPT Integration

OpenAI's ChatGPT, currently the most famous artificial intelligence service, is integrated into Apple Intelligence. For example, if you need to compose a piece of writing from scratch, Apple Intelligence harnesses the power of ChatGPT. It's free, and you're asked before it is used.

Present the story as a series of short, numbered sections, like a gentle bedtime countdown.

The Little Star Who Learned to Shine

Once upon a time, far above the clouds, there lived a tiny star named Luma. She was
star in the entire night sky, and she often felt shy because her twinkle wasn't as brigh
others. While the big stars shimmered and sparkled, Luma flickered softly, hoping so
notice her.

One evening, the Moon floated by and saw Luma looking down at the sleeping world

"Why so quiet, little one?" the Moon asked gently.

"I wish I could shine brightly like the other stars," Luma said with a sigh. "Then childre
wishes on me."

The Moon smiled. "Sometimes, even the smallest star can be the most special. All yo
something to believe in."

Hey Guys,

It's time to finalise the agenda for tomorrow's meeting. Points for discussion are:

* New magazine launch
* Advertising push
* The move to the new office
* Appointing a new financial controller

Can either of you think of any more?

Regards,
Ian

4 Once you've finished typing your letter, click the Send button in the top left corner of the email panel to send it on its way. Email is usually sent very quickly, and your addressee should receive it within a couple of minutes, as long as there are no issues with their connection or provider.

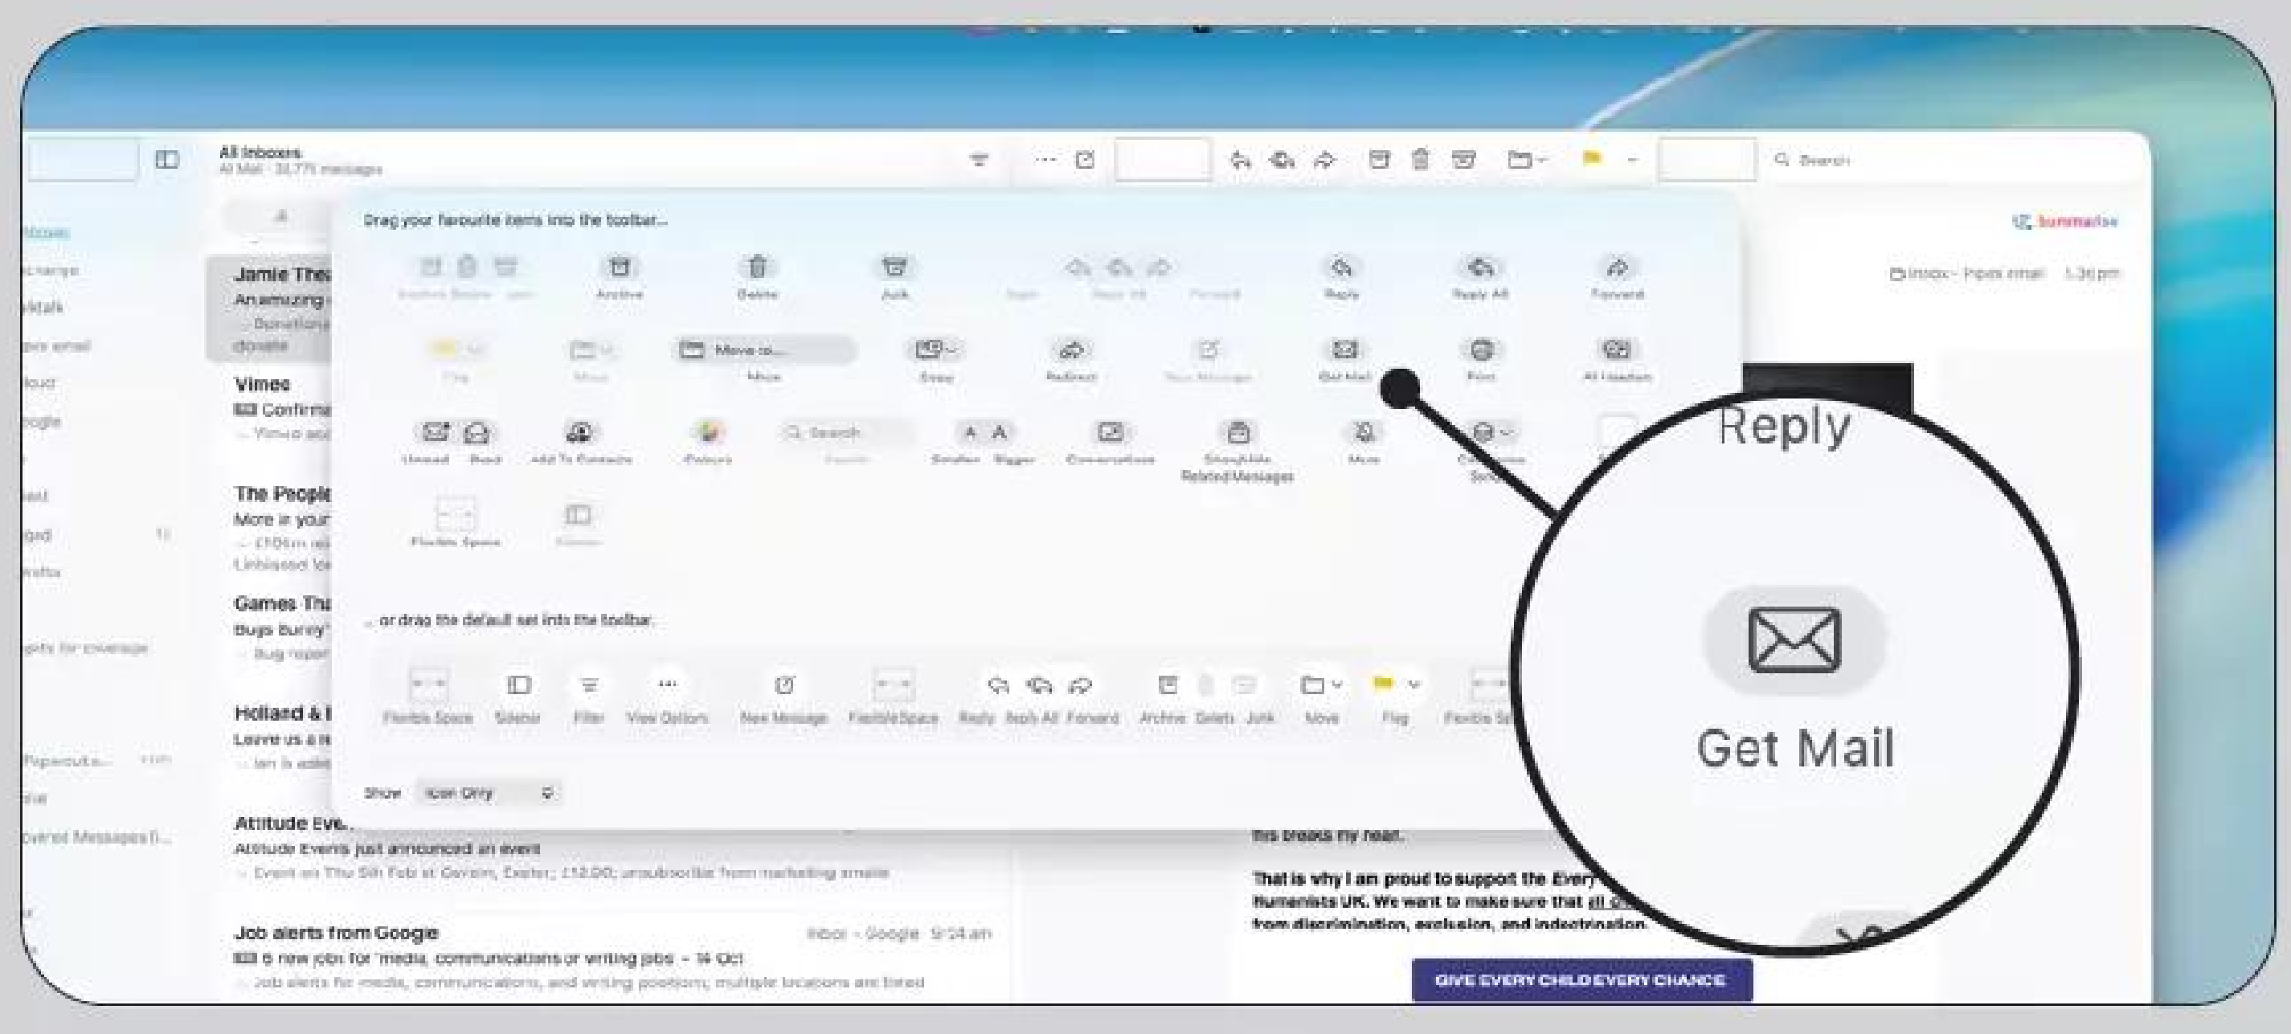
Dear Ian,

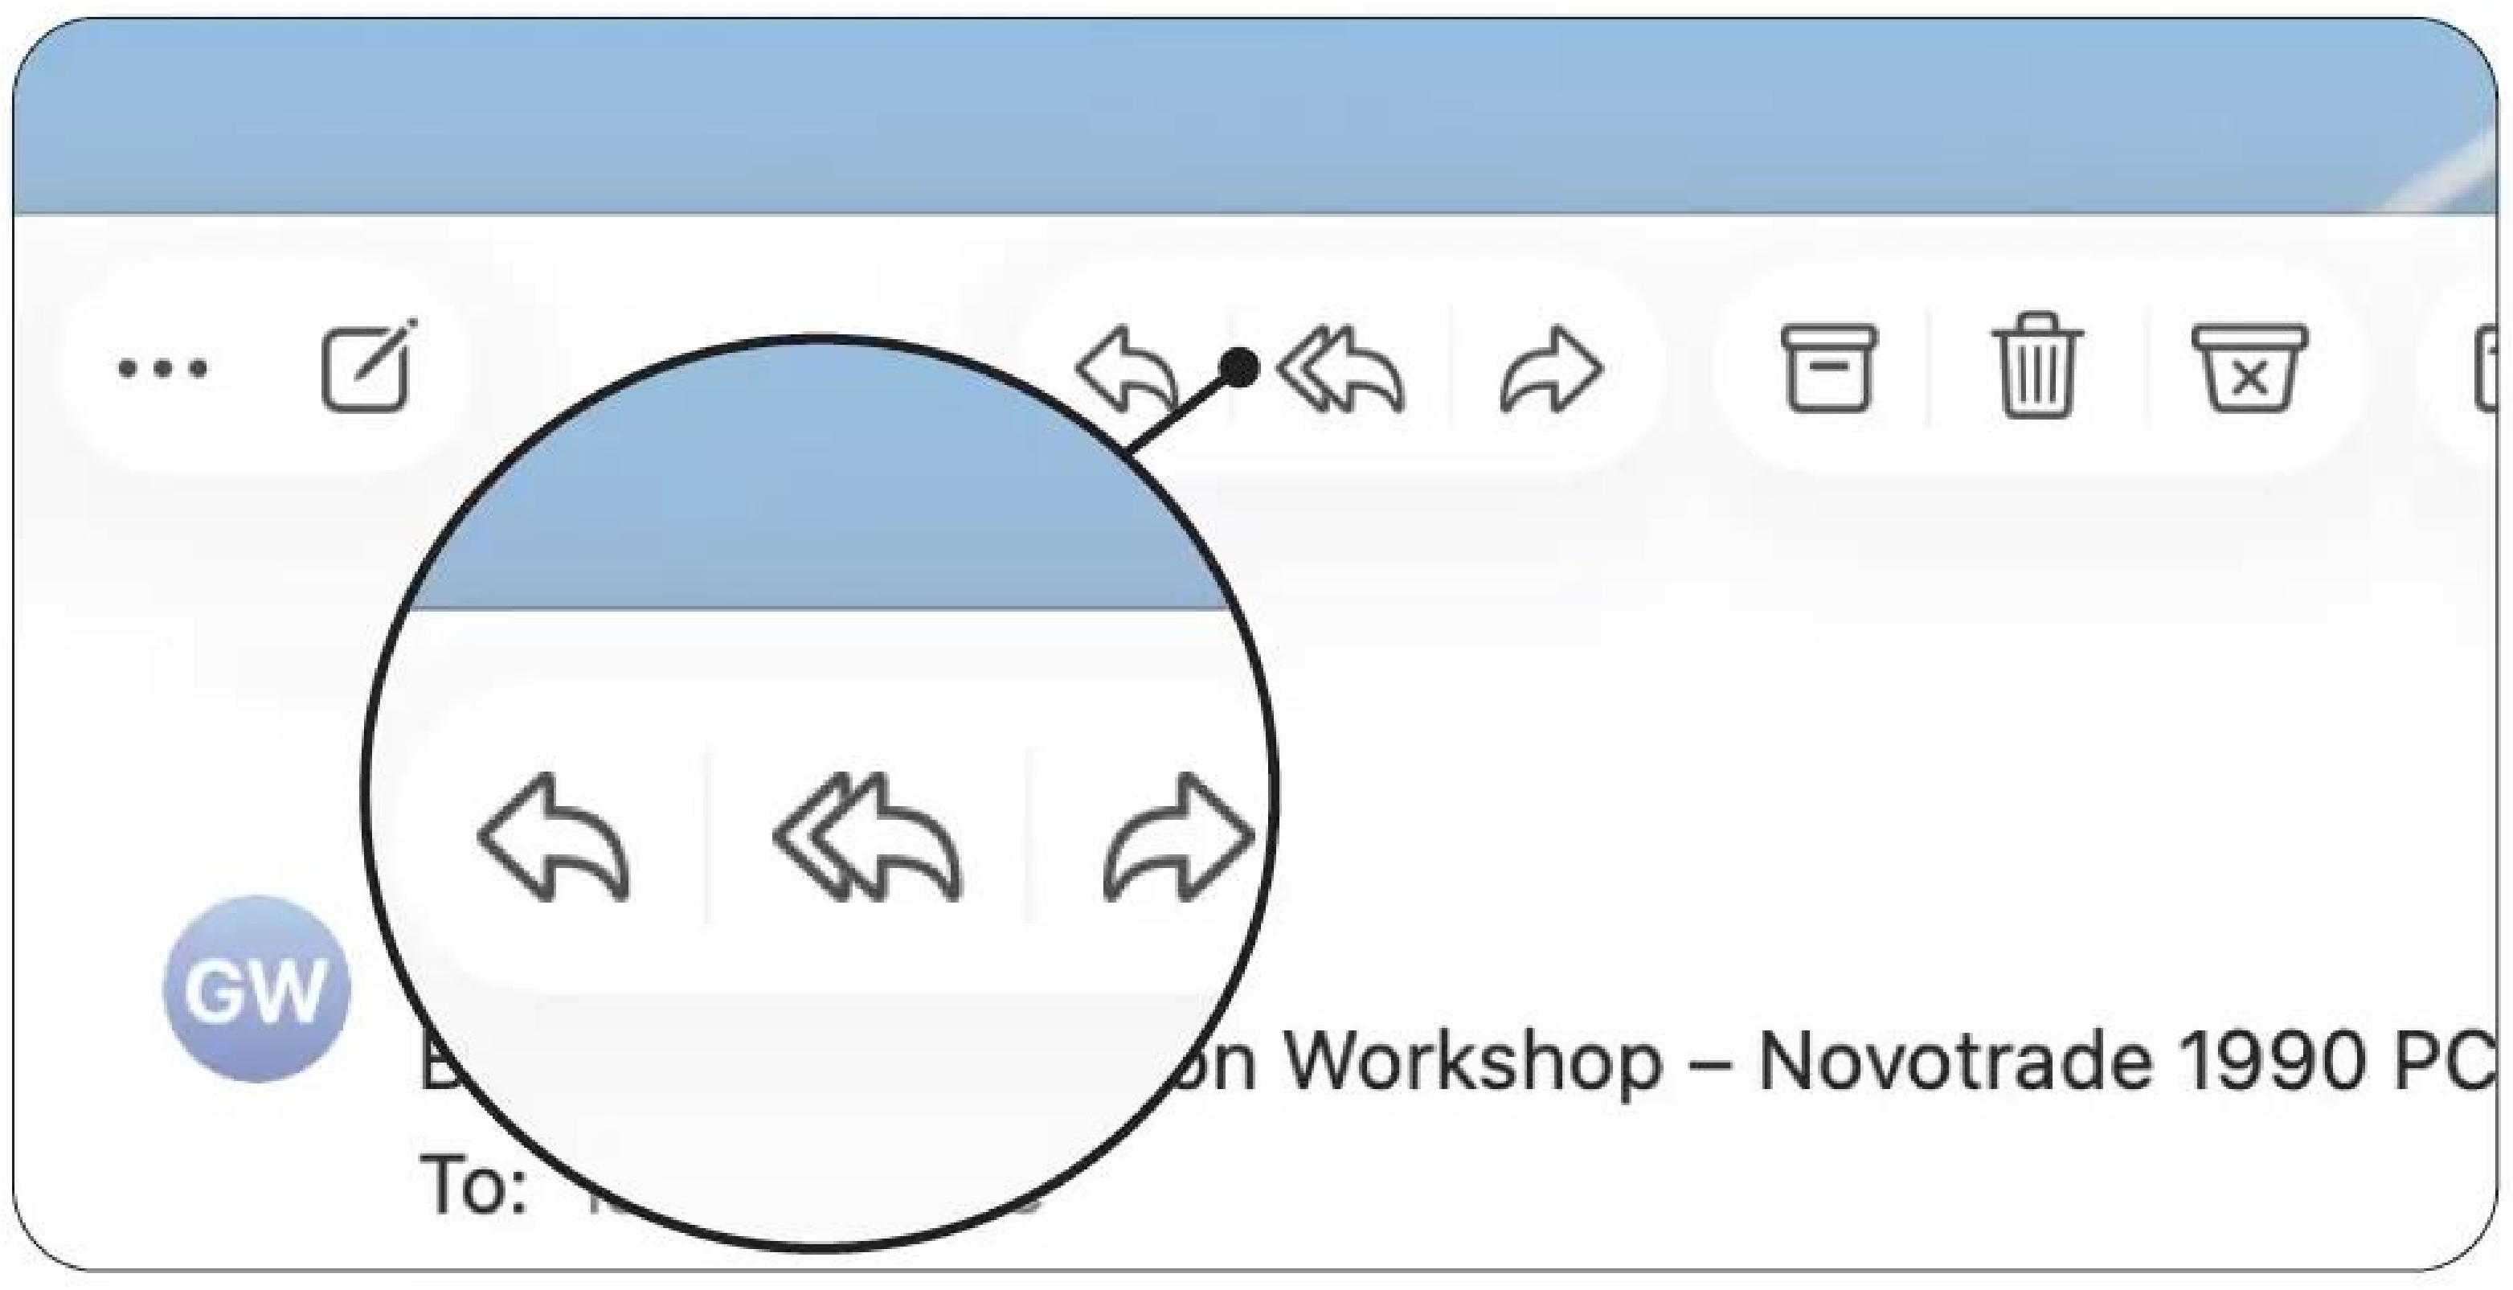
Across the UK, thousands of children are still being denied a fair educ
turned away from their local schools because their families do not foll
Others are sent to illegal, unregulated schools where they miss out on
Too many are still taught creationism and dogma instead of science a
this breaks my heart.

That is why I am proud to support the *Every Child, Every Chance*
Humanists UK. We want to make sure that all children have a fair
from discrimination, exclusion, and indoctrination.

Once you've set up your email account, you can send and receive email. As soon as you launch Mail, it connects to your email service and collects any email that is waiting for you. These messages are shown as a list in your Inbox. Click on one and it's displayed on the right.



For some reason, the Get Mail button was removed from Mail in Tahoe. To get it back, right-click the toolbar and choose Customise Toolbar. Find the Get Mail icon in the picker, and drag it onto the app's toolbar.



Replying to & Forwarding Email

If someone you know sends you an email, you'll probably want to reply to them. Simply click on the email so you are viewing the text of it, then at the top of the screen you'll find a row of three buttons, as you can see here.

The leftmost one has a single left-pointing arrow on it. This is the Reply button. If you click on this you'll see a window pop up that looks a lot like the window for a new email, but it will have the responder's email address already in the To: box.

Next to the Reply button is a similar button with two left arrows on it. This is the Reply All button; use this with extreme care. If you have been sent an email that has also been sent to a number of other recipients, hitting Reply All will send your reply to everyone who received the original mail. Obviously if your reply was meant to be private this is a very bad idea, and has got many people into trouble.

The rightmost button of these three is the Forward button, which is used to send an email you've received to another recipient. Forwarding emails is another thing that requires care; make sure that you don't accidentally send private information to someone who was not meant to receive it.

Adding Attachments

Almost any type of file can be attached and sent over the Internet along with your email.

What a great photo of Boots!

Ian xxx

To add an attachment, first start an email (or reply to one you received), and then click on the button bearing the picture of a paperclip, at the top right of the email panel. This will open a Finder window, allowing you to navigate to the file or files that you want to send. Select the ones you want, then click Choose File to attach them.

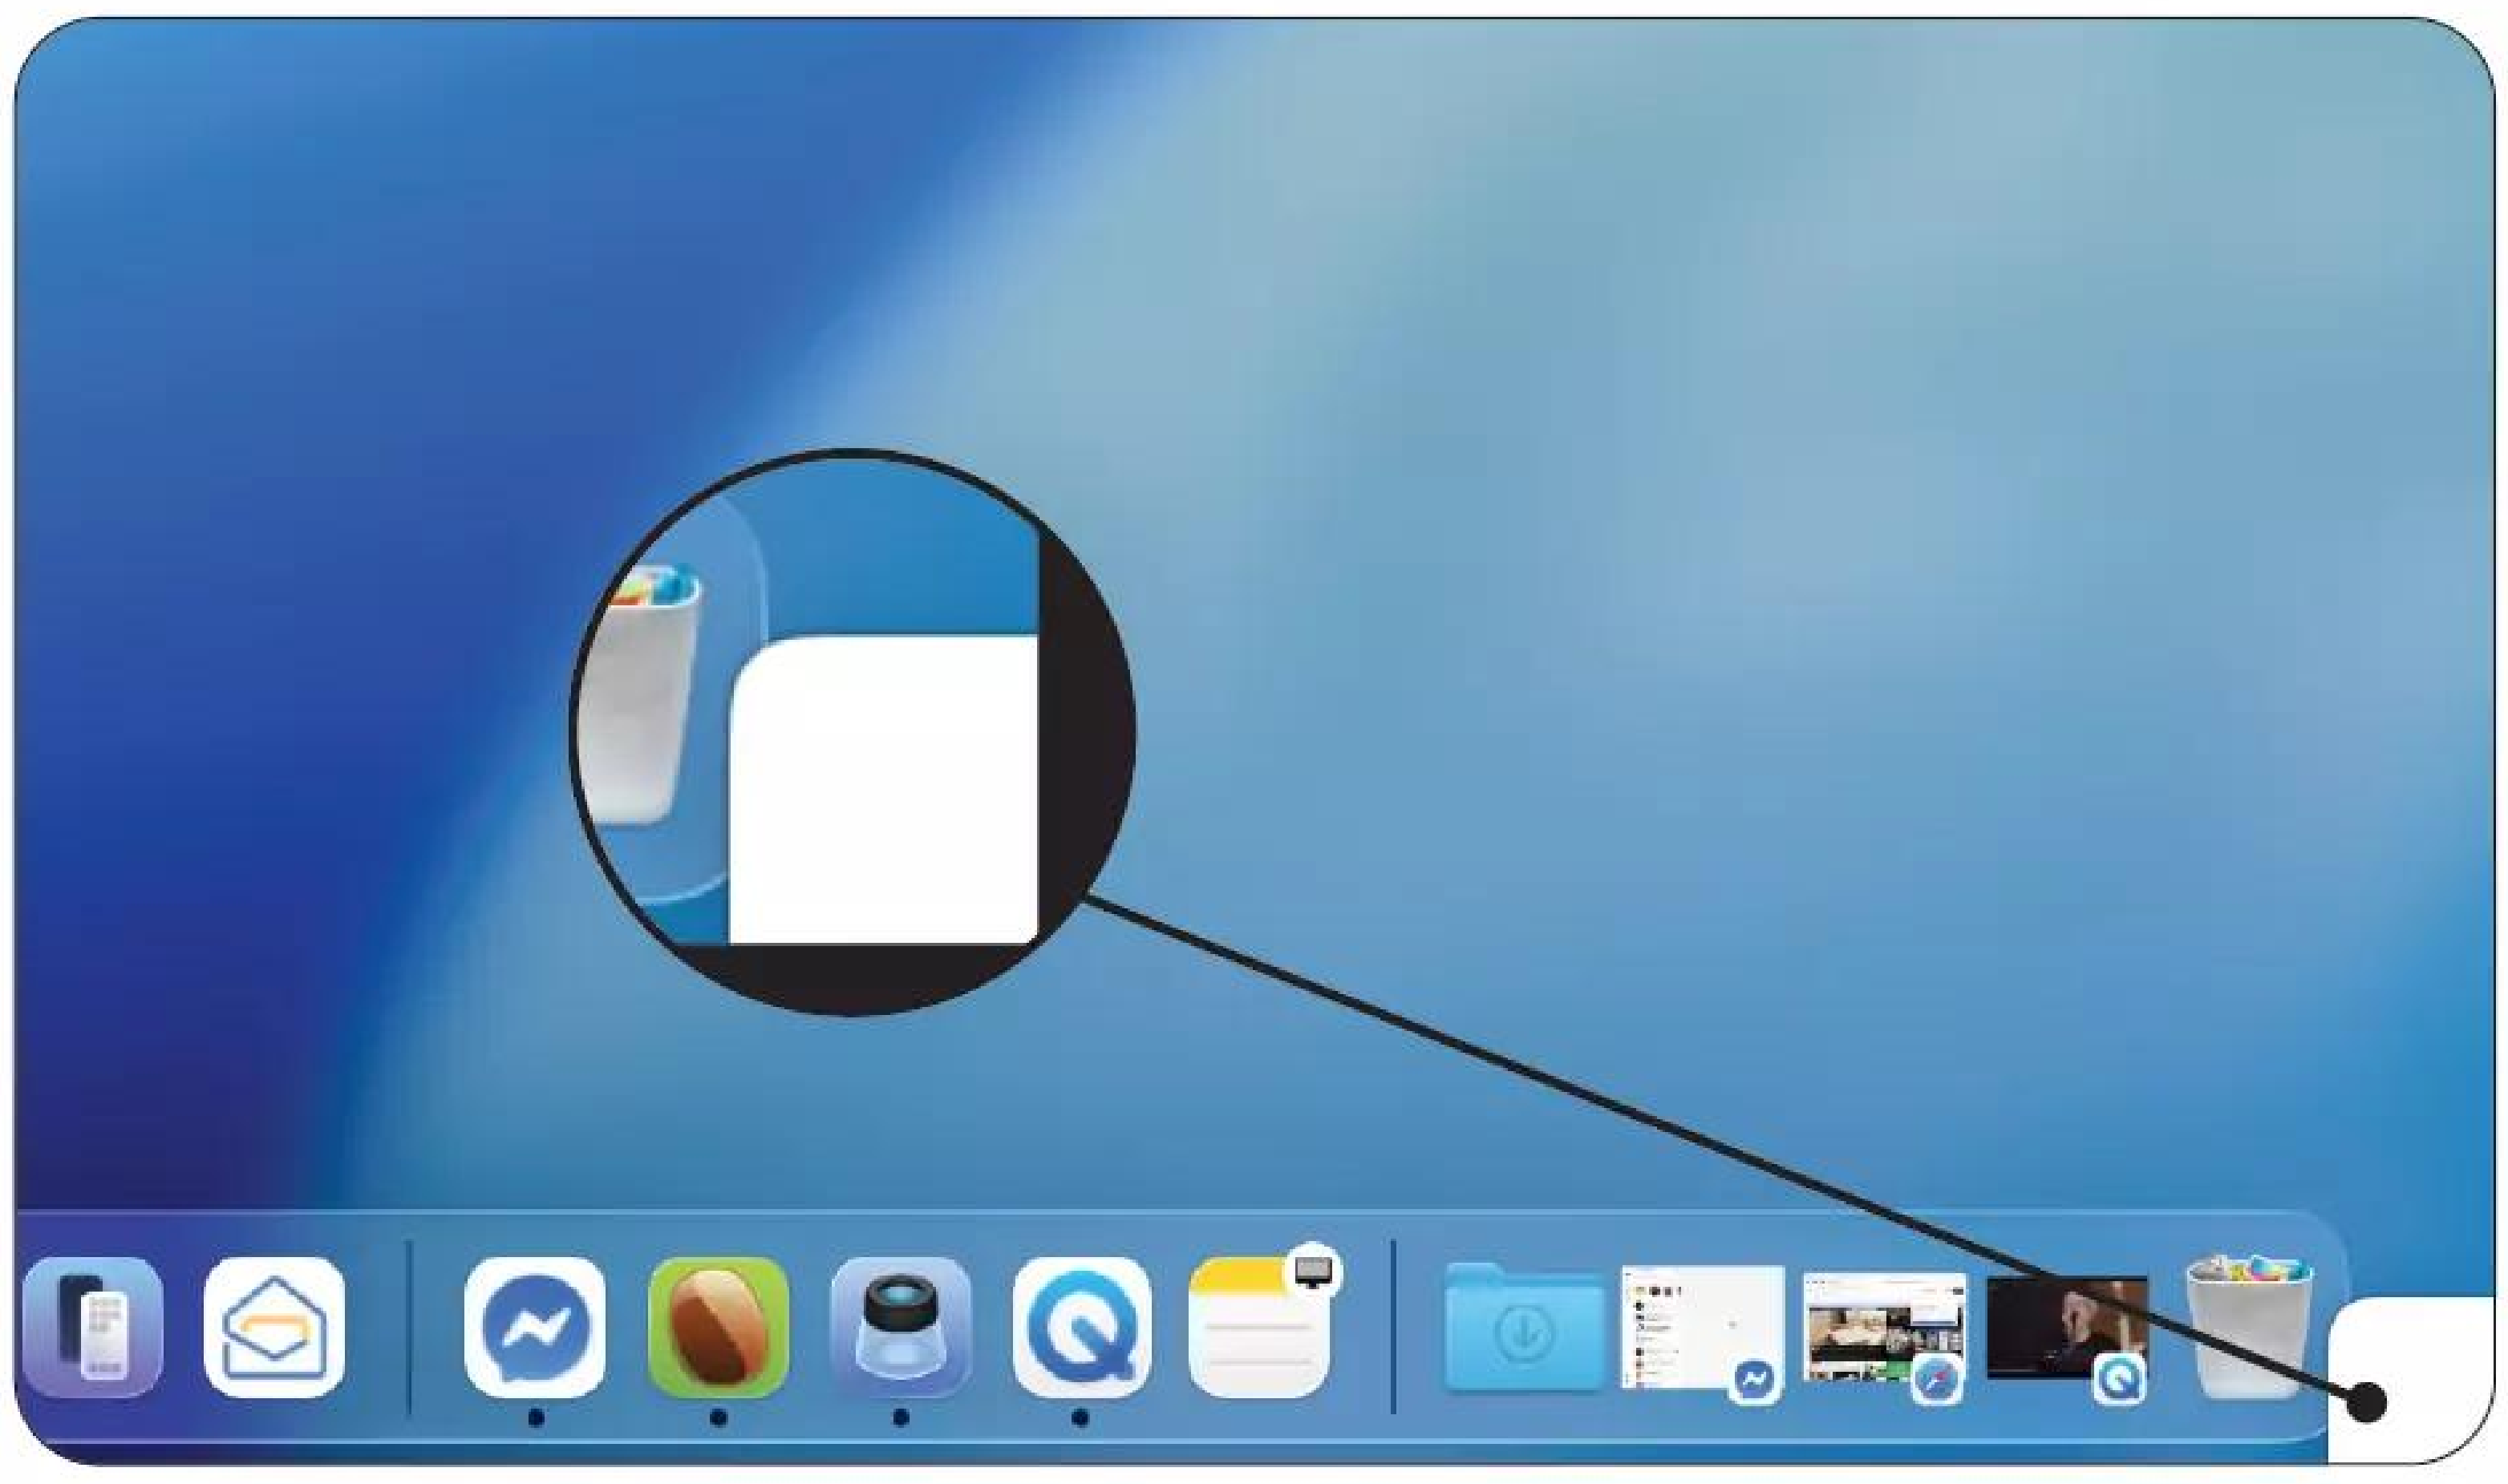
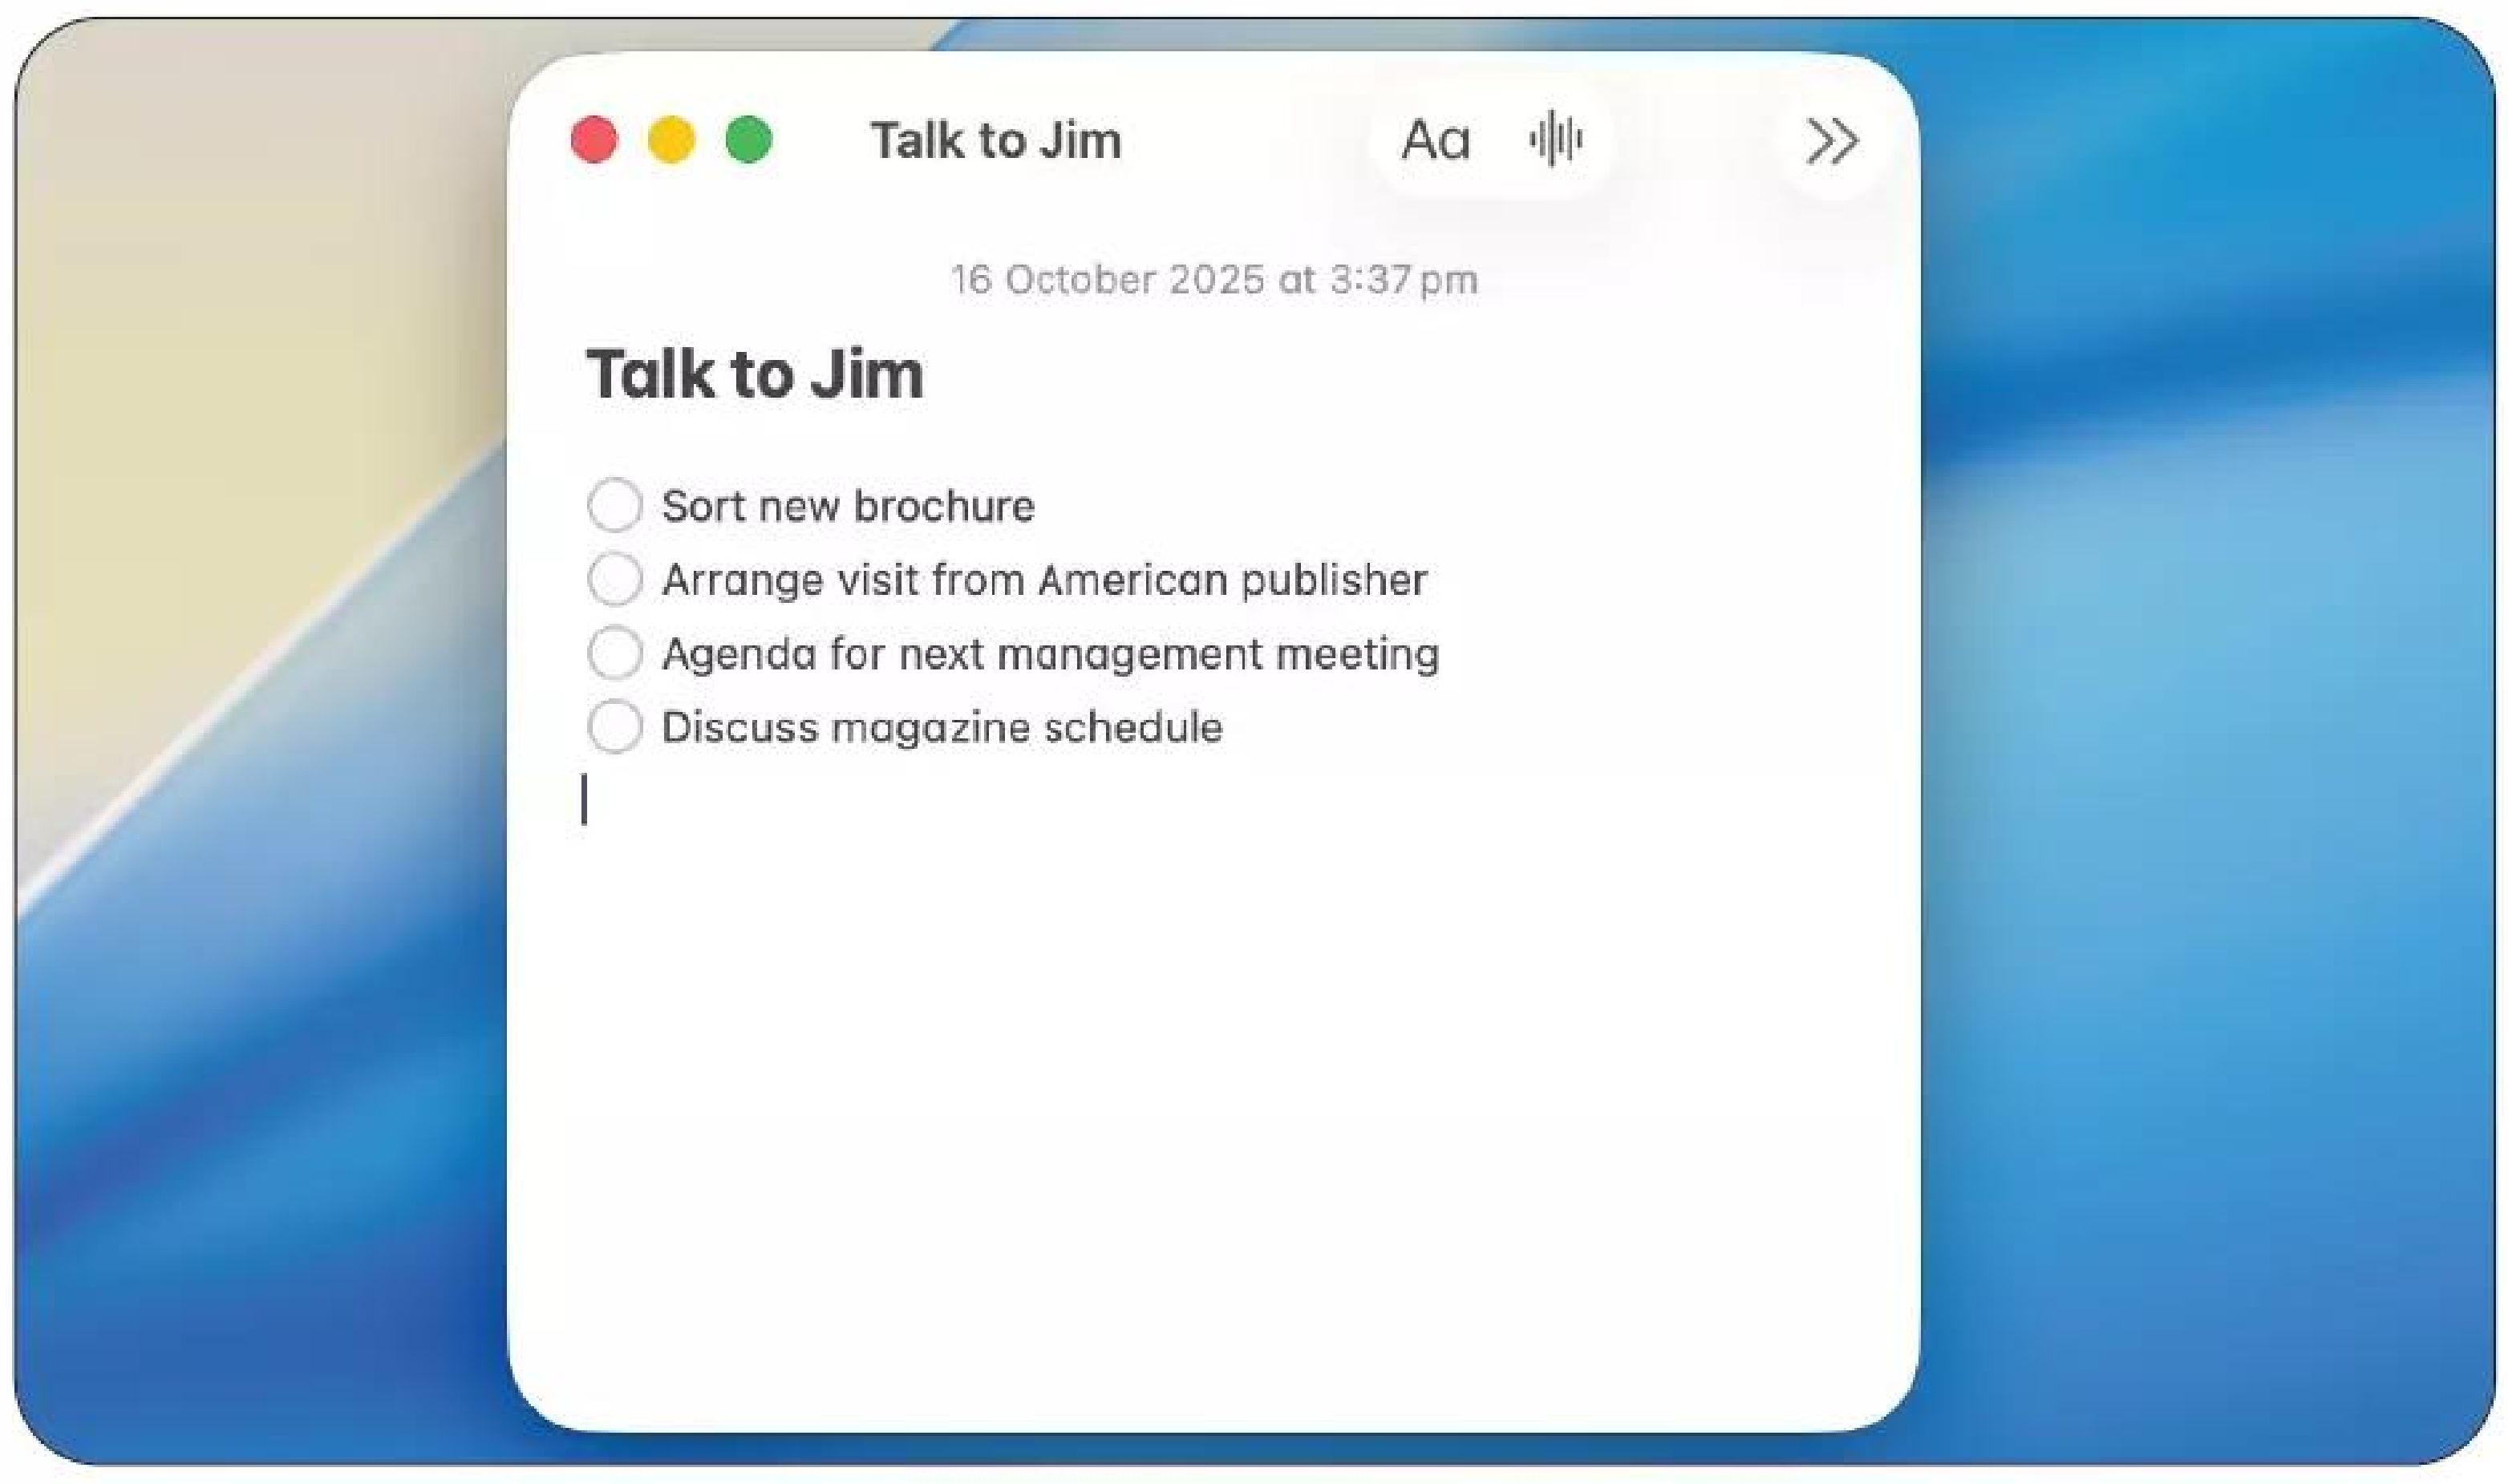
Pictures you've added as attachments are shown in the body of the email. If you don't want to display it as an attachment, right-click on it and from the contextual menu, choose View as Icon. It can still be opened by the recipient. If your email suggests you're sending an attachment but you forget to add it, you get a reminder when you try to send the message.

Enhanced Uses of the Notes App

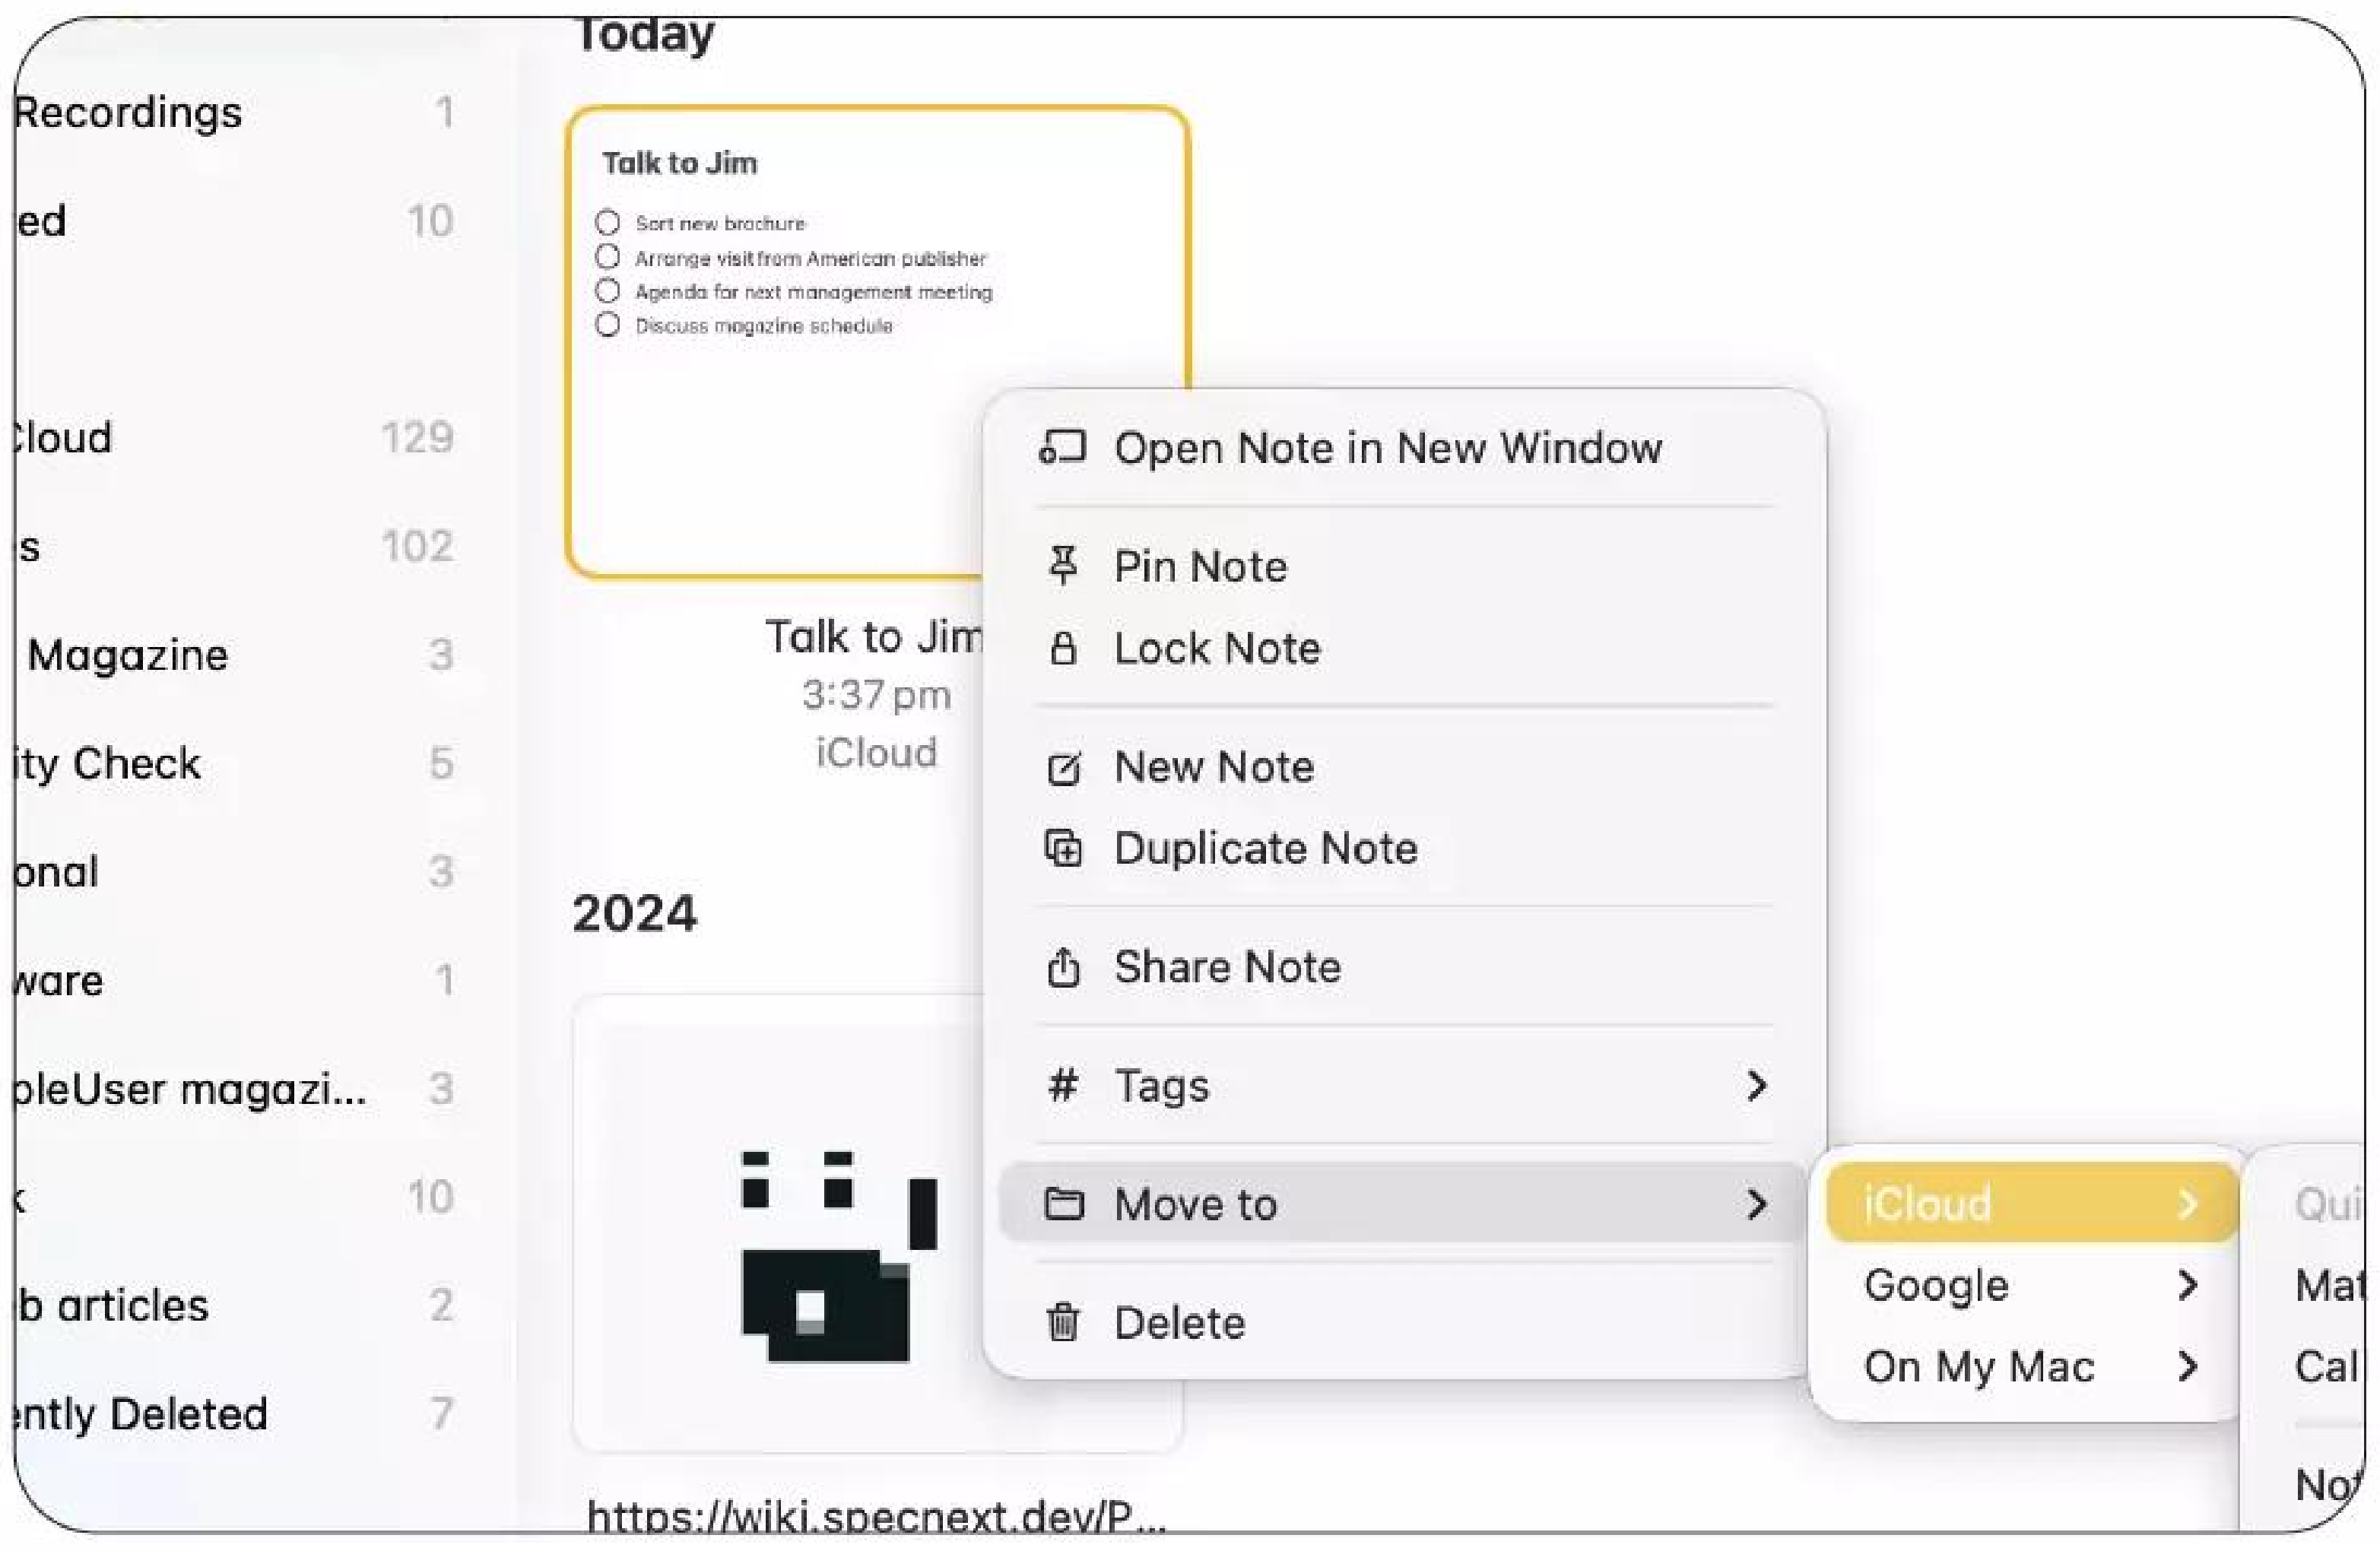


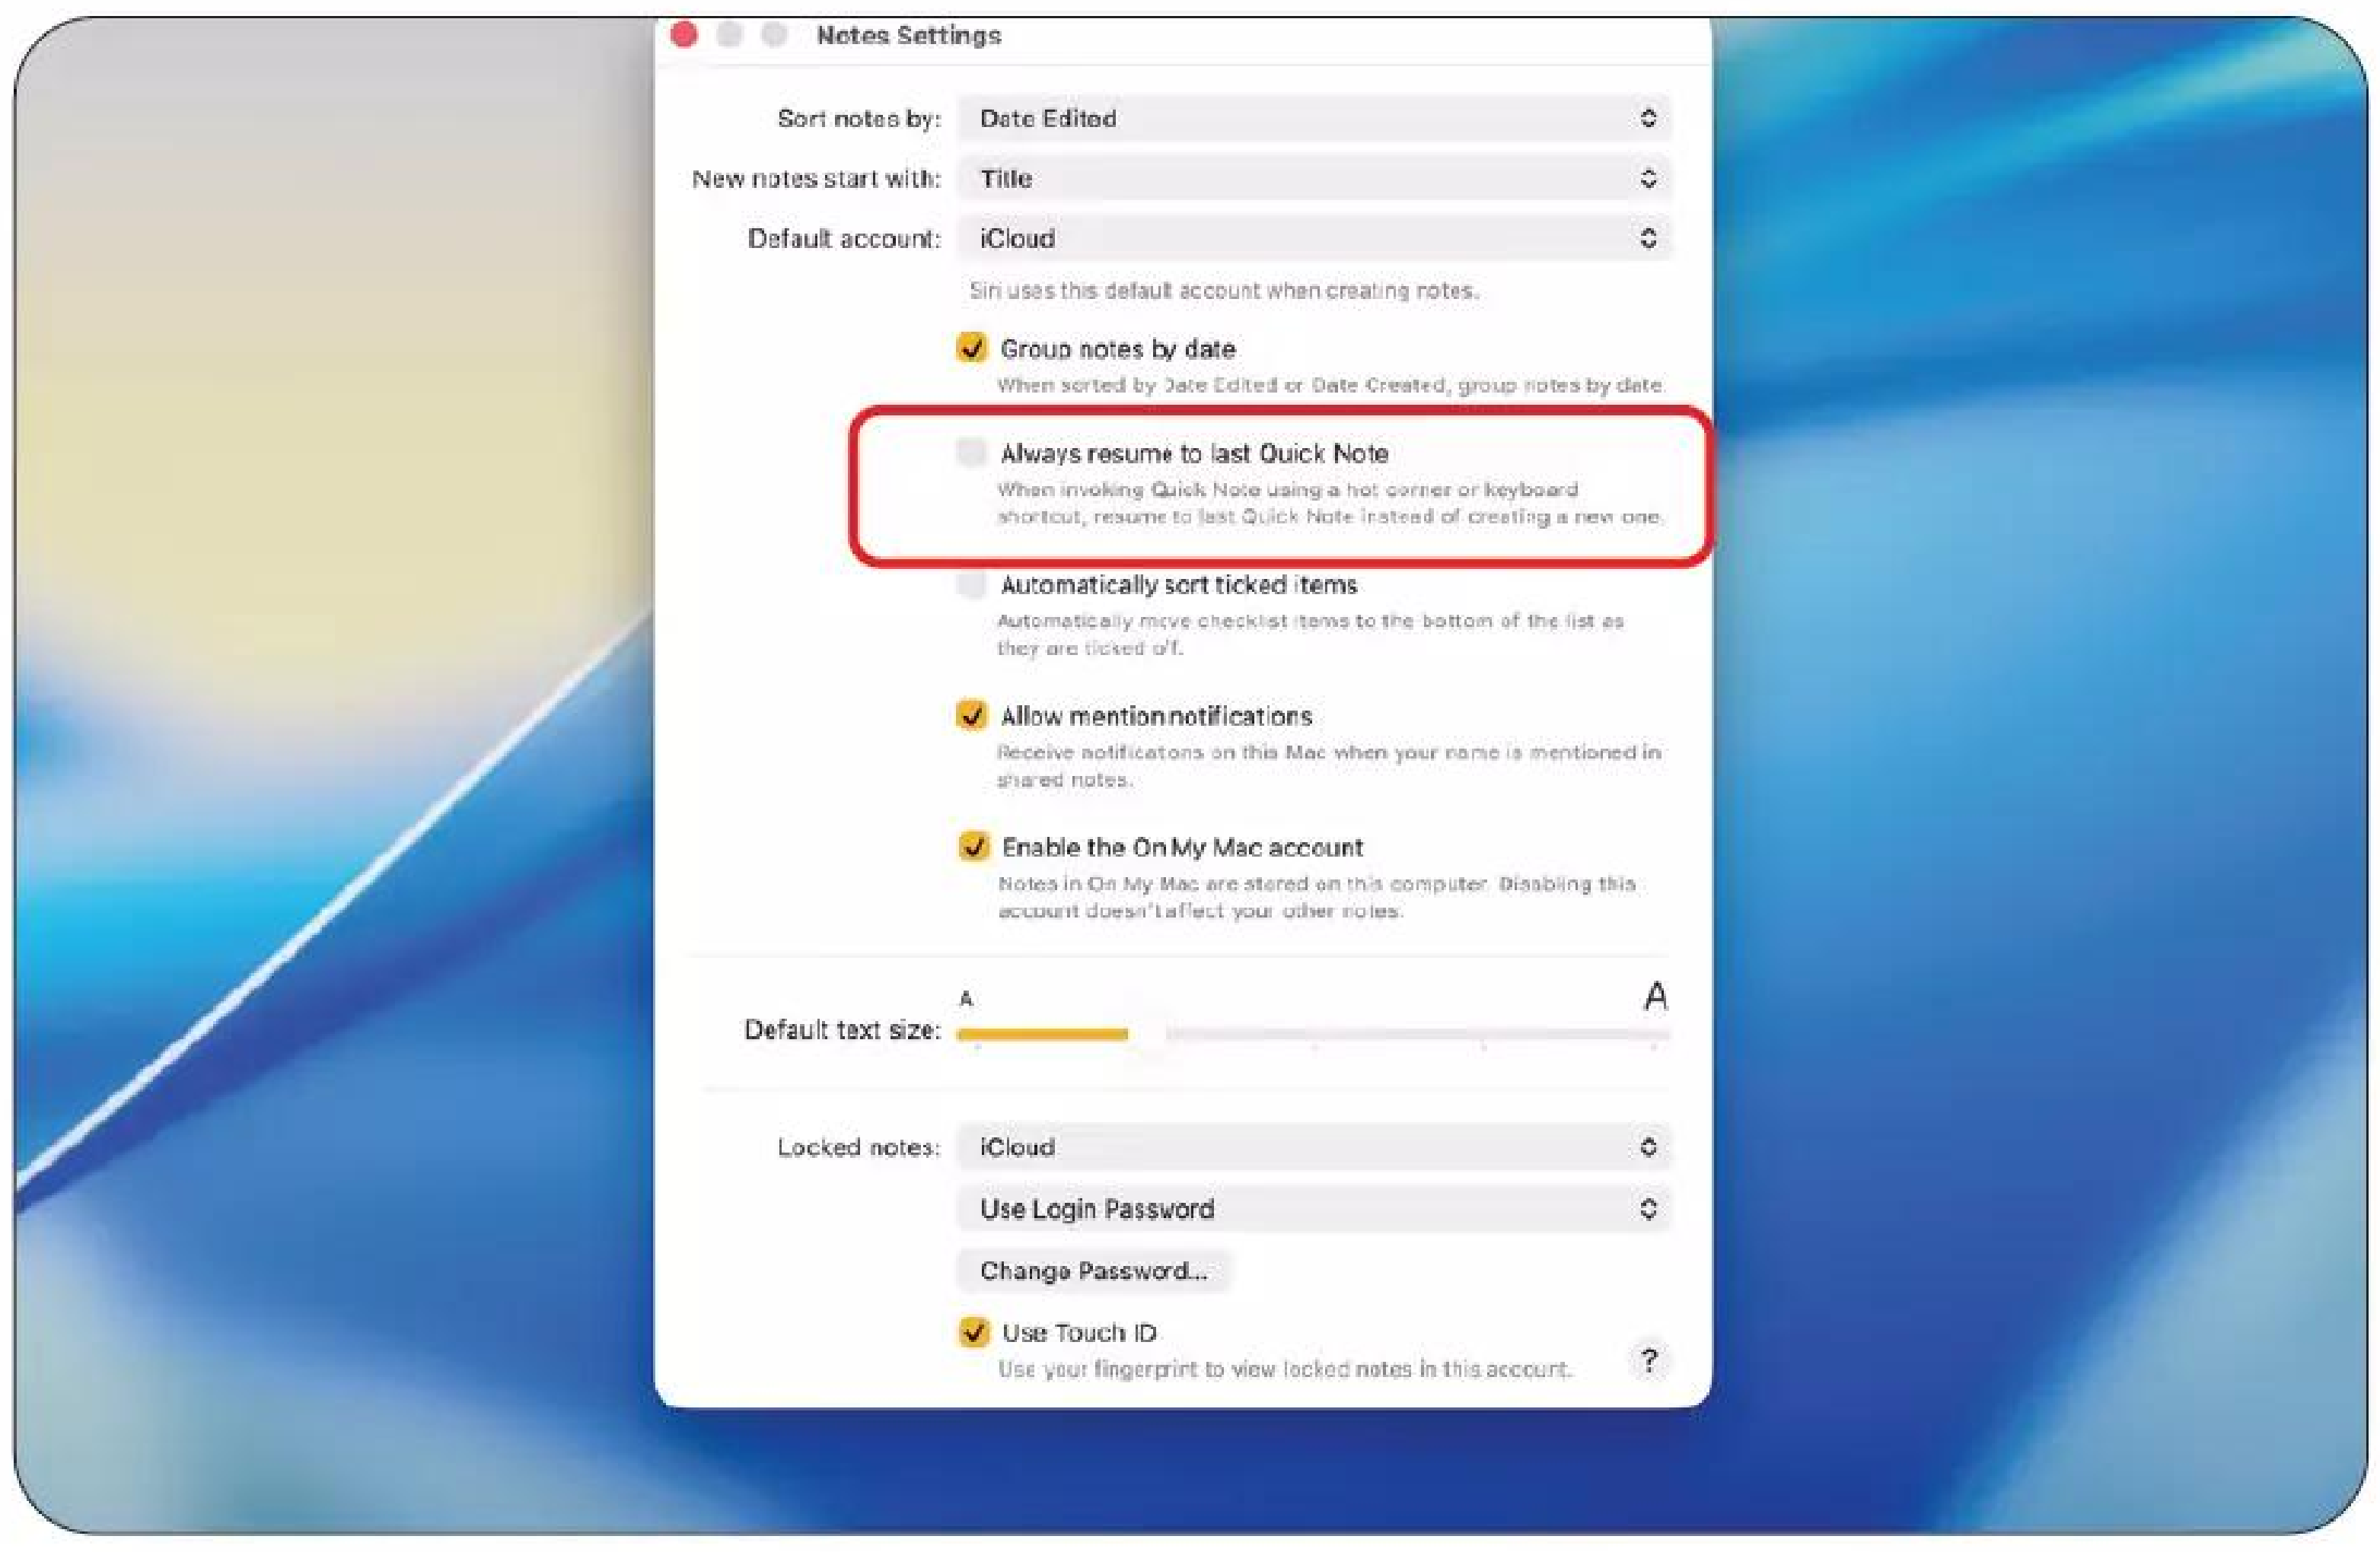


Talk to Jim
16 October 2025 at 3:37 pm
Talk to Jim
○ Sort new brochure
○ Arrange visit from American publisher
○ Agenda for next management meeting
○ Discuss magazine schedule

1 To open a Quick Note, drag your pointer to the bottom-right corner of the screen and click the white box that appears. In Safari, you can highlight text and right/ctrl click on it, and select New Quick Note from the menu.

2 The keyboard shortcut Fn-Q also opens Quick Note. When you've opened one, you can write and format it just like you can with regular notes. Review your Quick Notes in the Notes app, in the folder at the top of the sidebar.



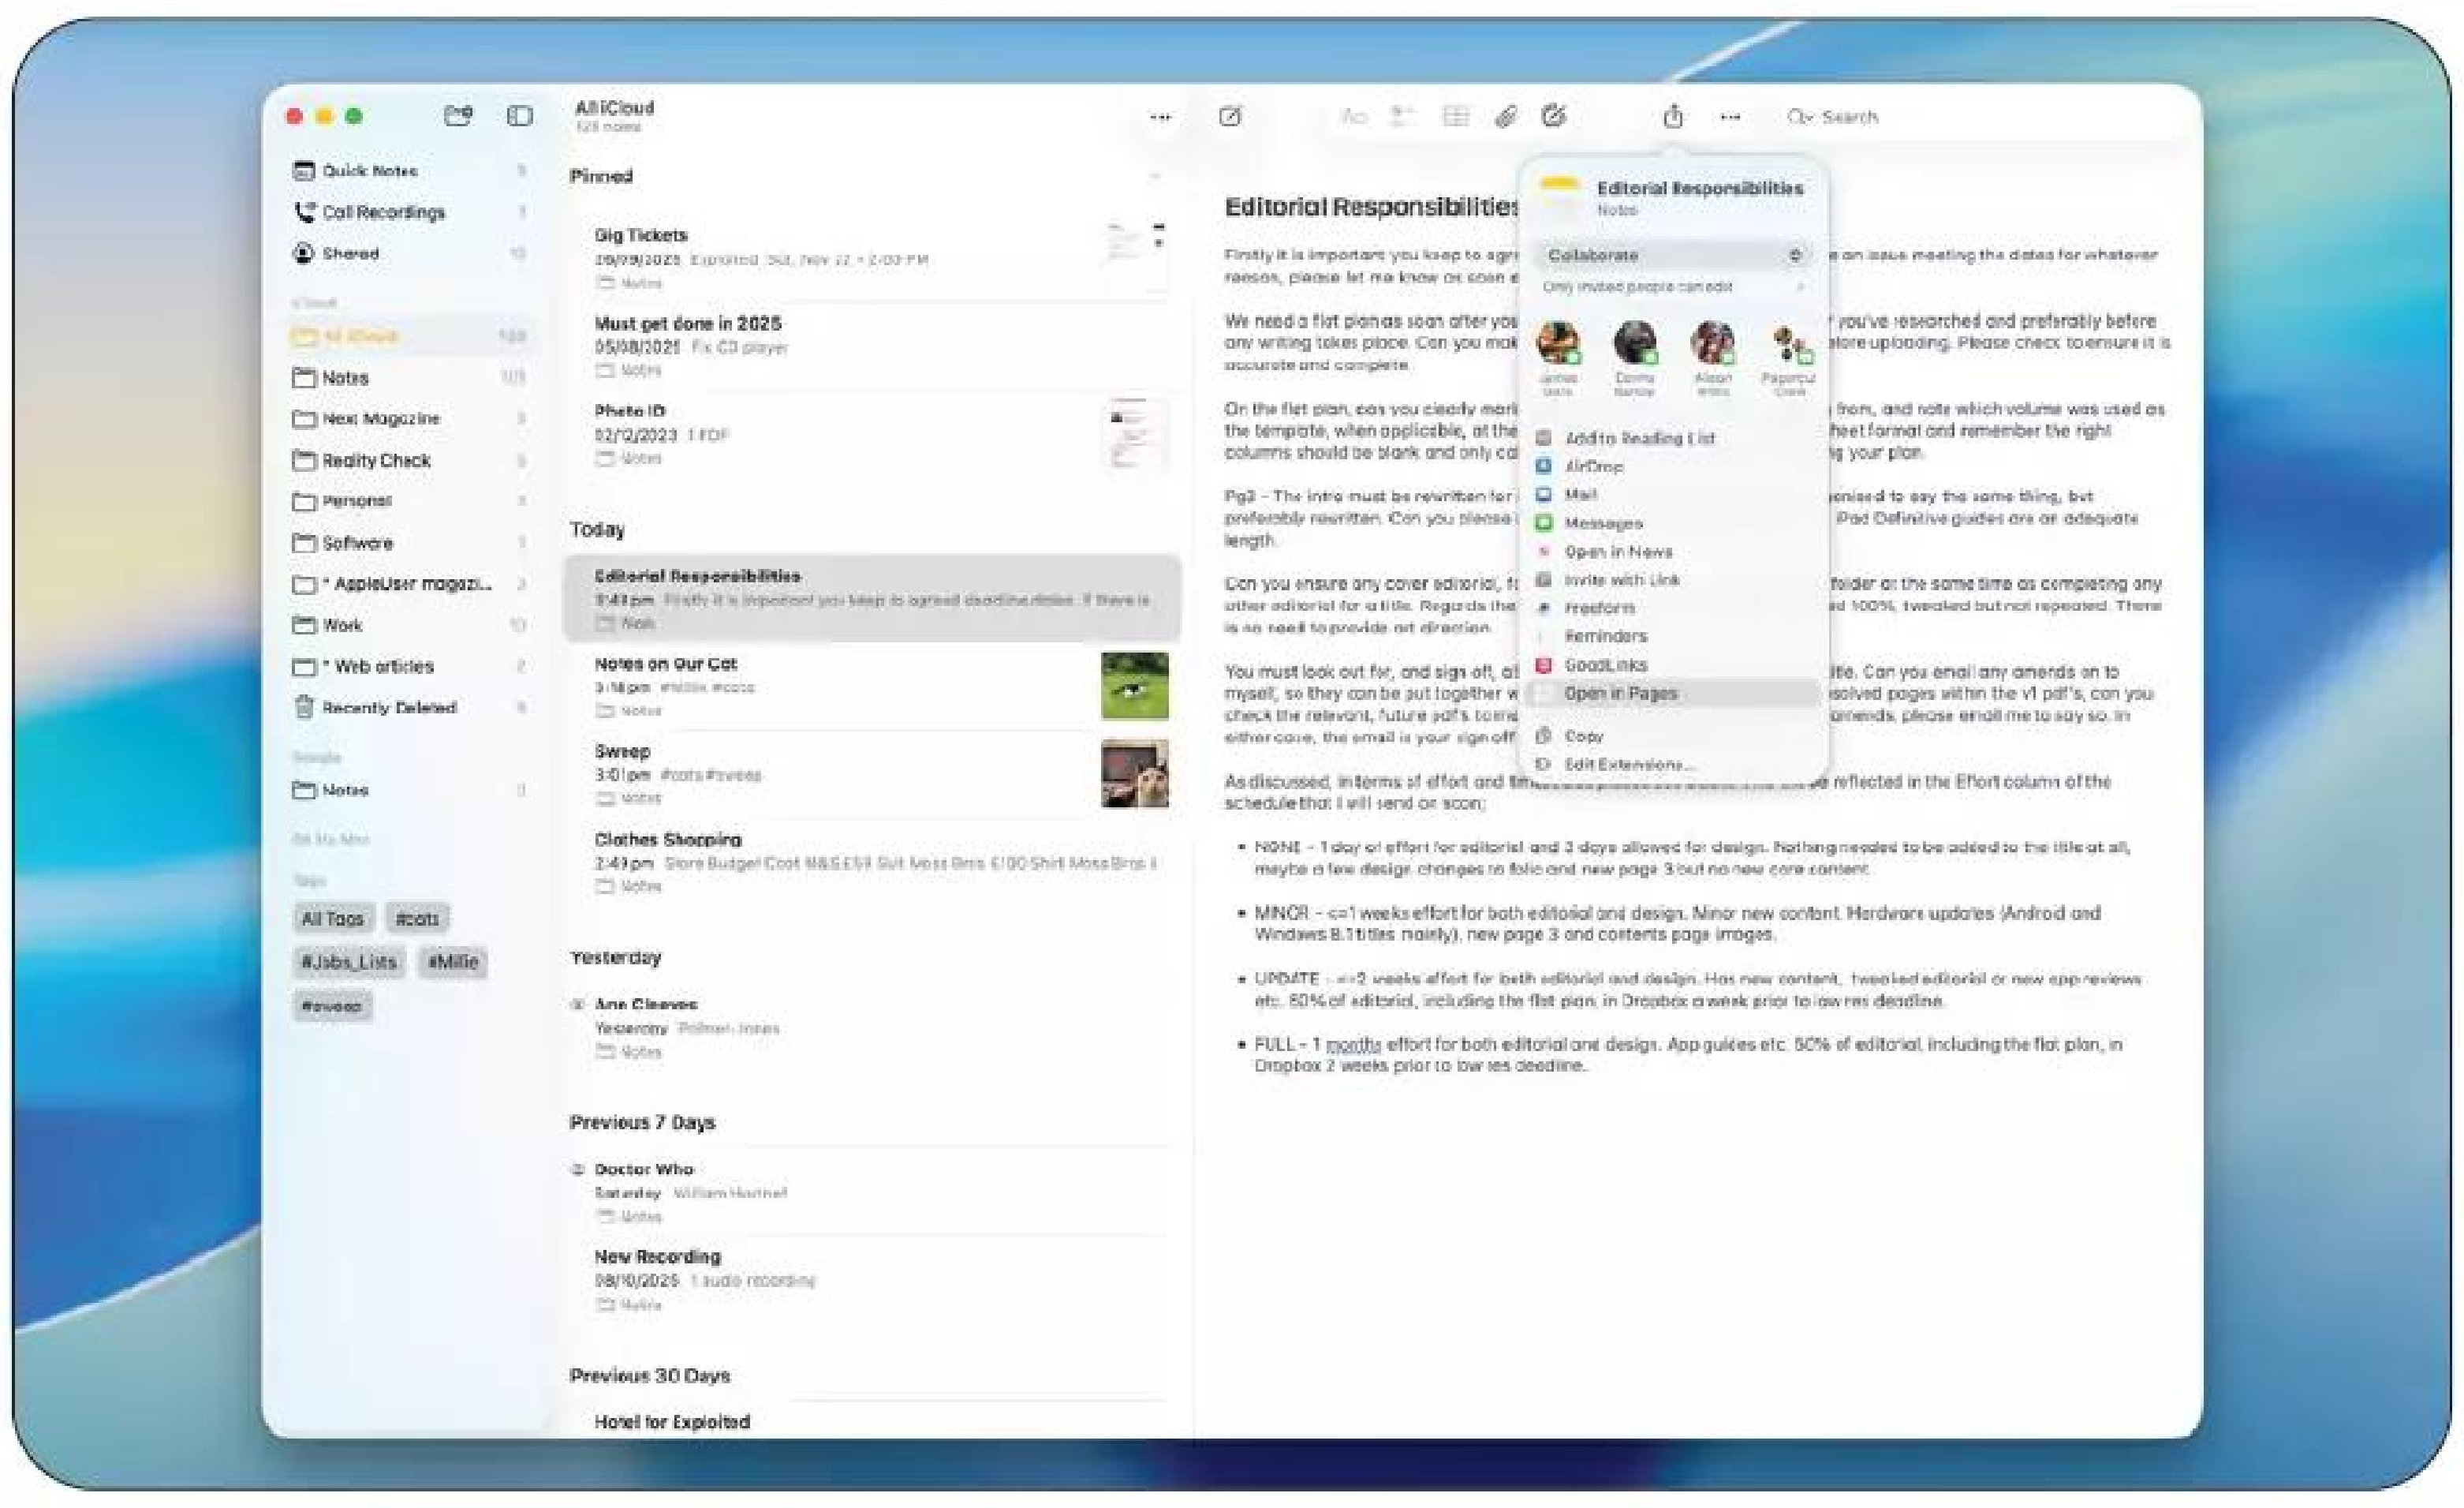


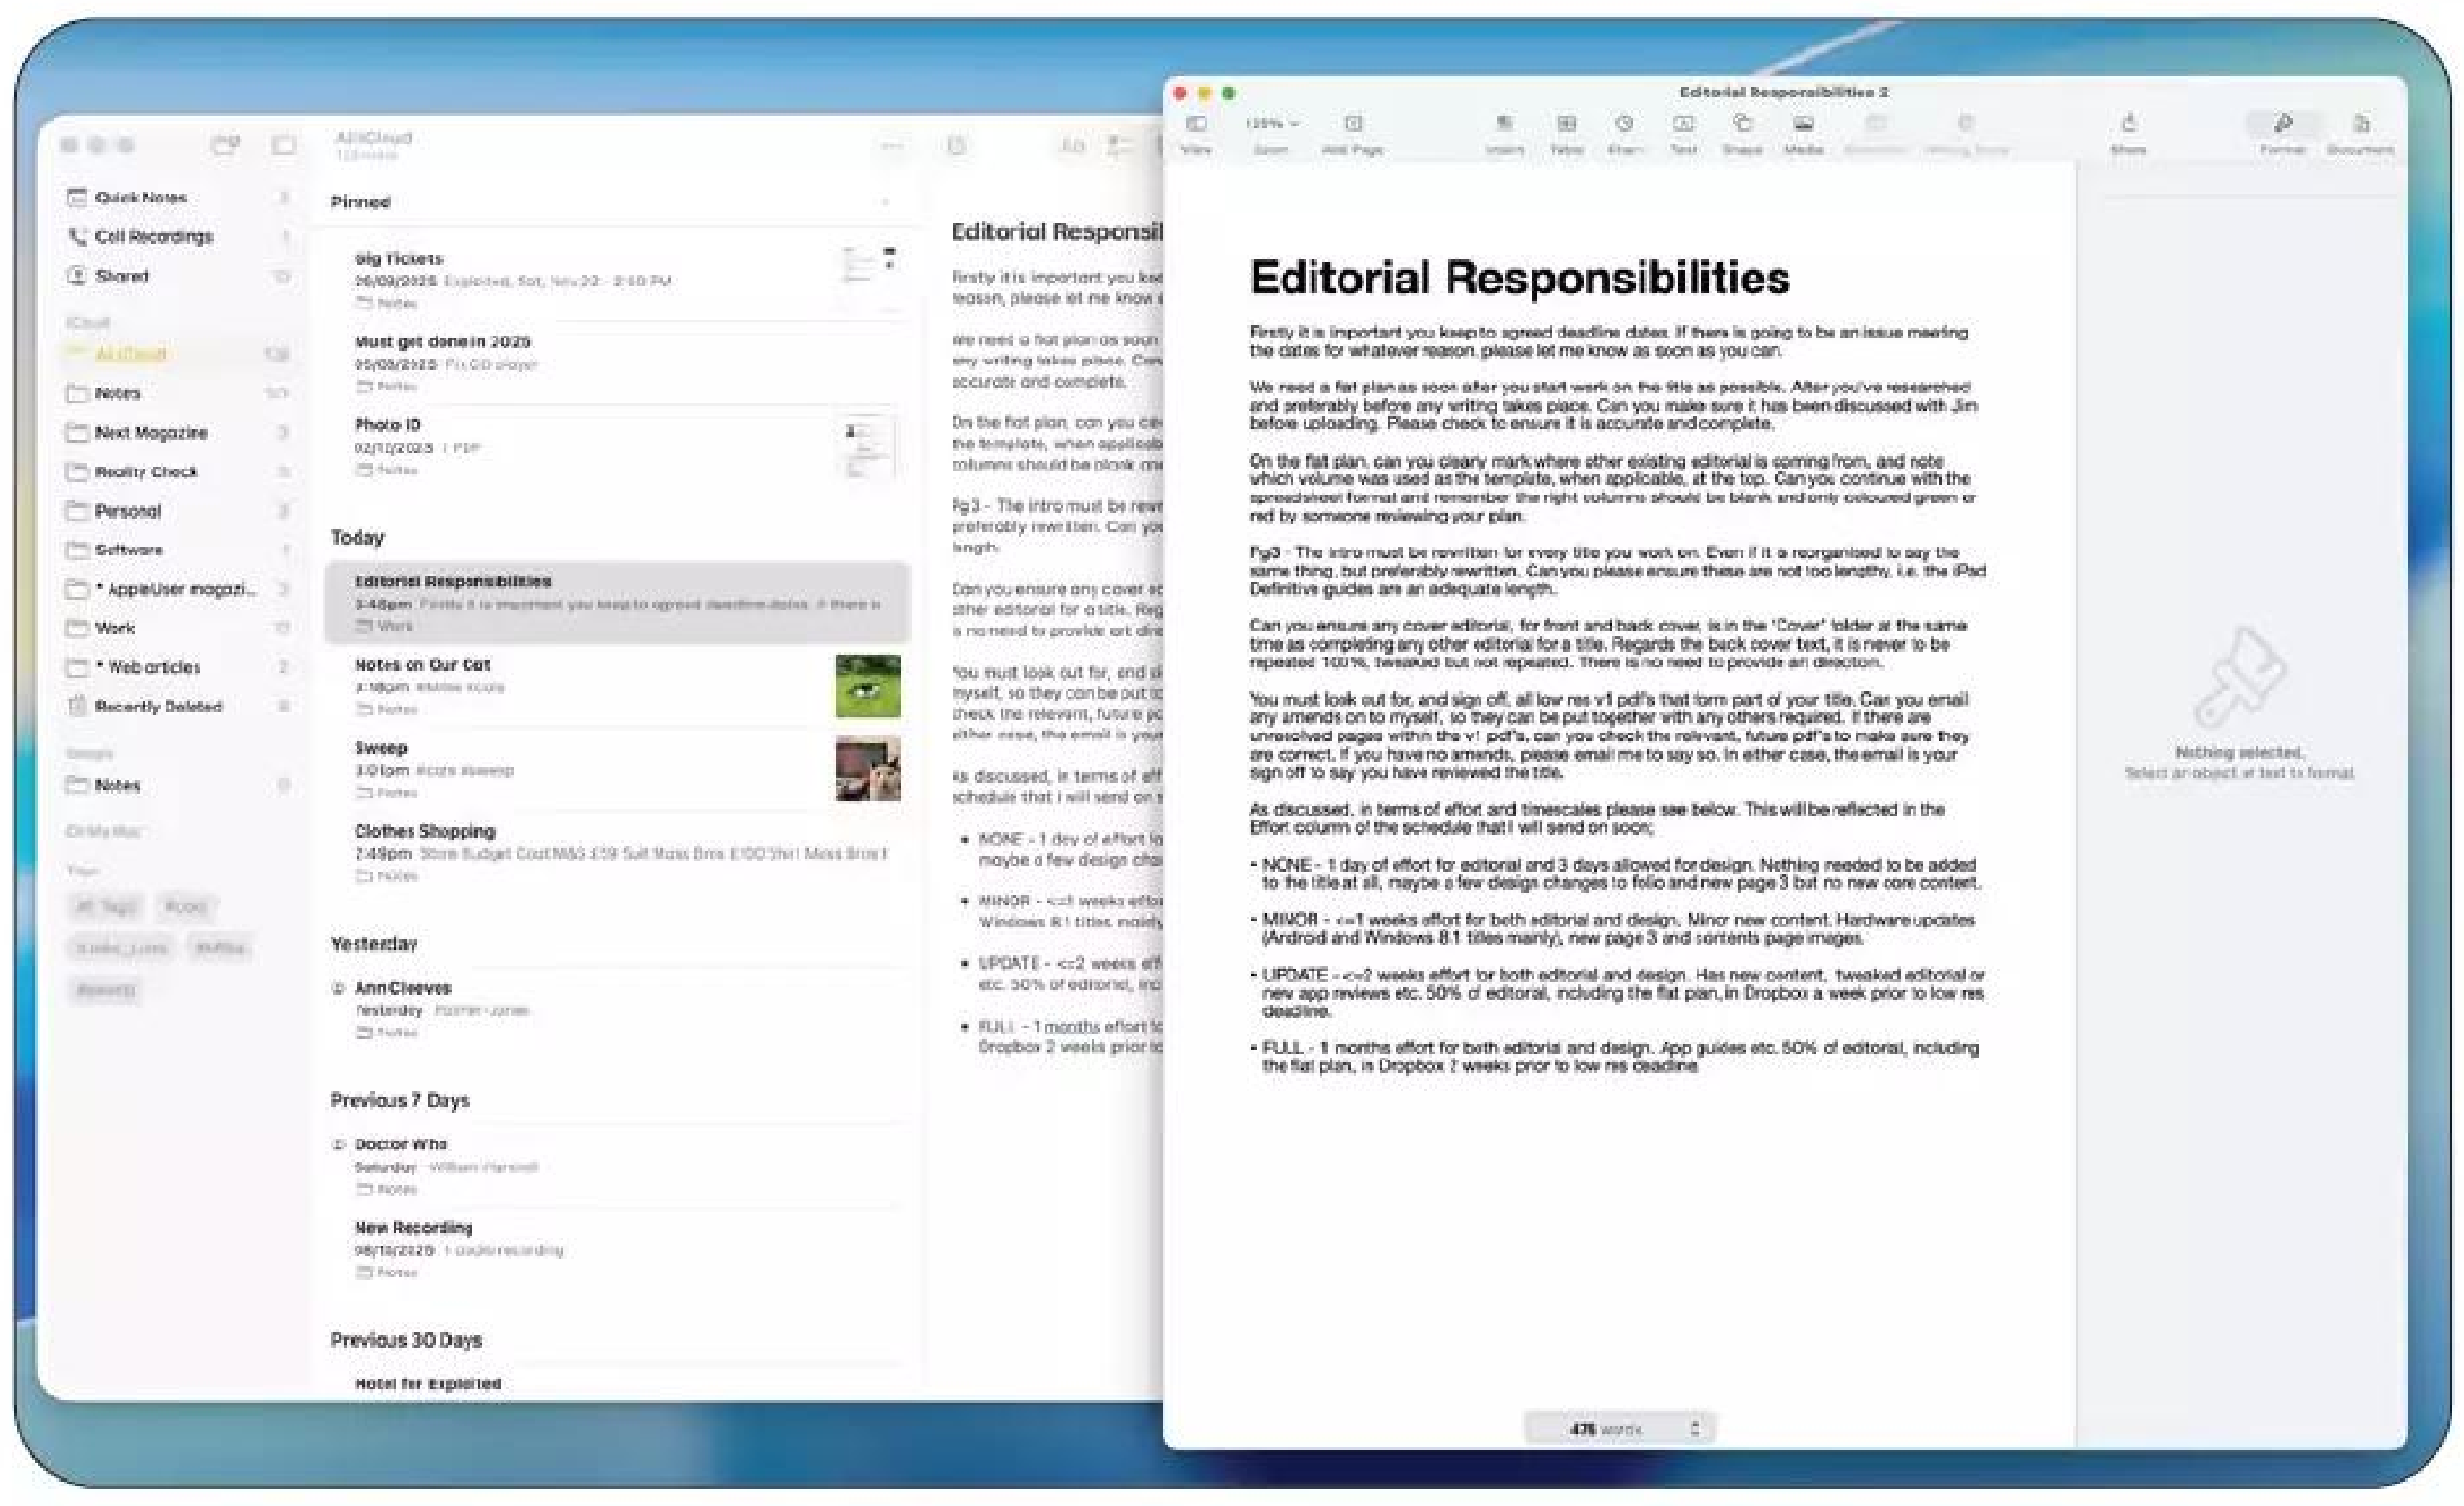
Notes Settings
Sort notes by: Date Edited
New notes start with: Title
Default account: iCloud
Siri uses this default account when creating notes.
☑ Group notes by date
When sorted by Date Edited or Date Created, group notes by date.
☐ Always resume to last Quick Note
When invoking Quick Note using a hot corner or keyboard shortcut, resume to last Quick Note instead of creating a new one.
☐ Automatically sort ticked items
Automatically move checklist items to the bottom of the list as they are ticked off.
☑ Allow mention notifications
Receive notifications on this Mac when your name is mentioned in shared notes.
☑ Enable the On My Mac account
Notes in On My Mac are stored on this computer. Disabling this account doesn't affect your other notes.
Default text size:
Locked notes: iCloud
Use Login Password
Change Password...
☑ Use Touch ID
Use your fingerprint to view locked notes in this account.

3 To turn a Quick Note into a regular note, right/ctrl click on its thumbnail in the Notes app, and in the menu, select Move To, then the folder you want to move it to. You can then treat it like a regular note instead of a Quick Note

4 If you'd rather a new note appear when you open your Quick Note instead of the last one you created being opened, in the Notes app, under the Notes menu open Settings. Uncheck the box 'Always resume to last Quick Note'.

Move to Pages

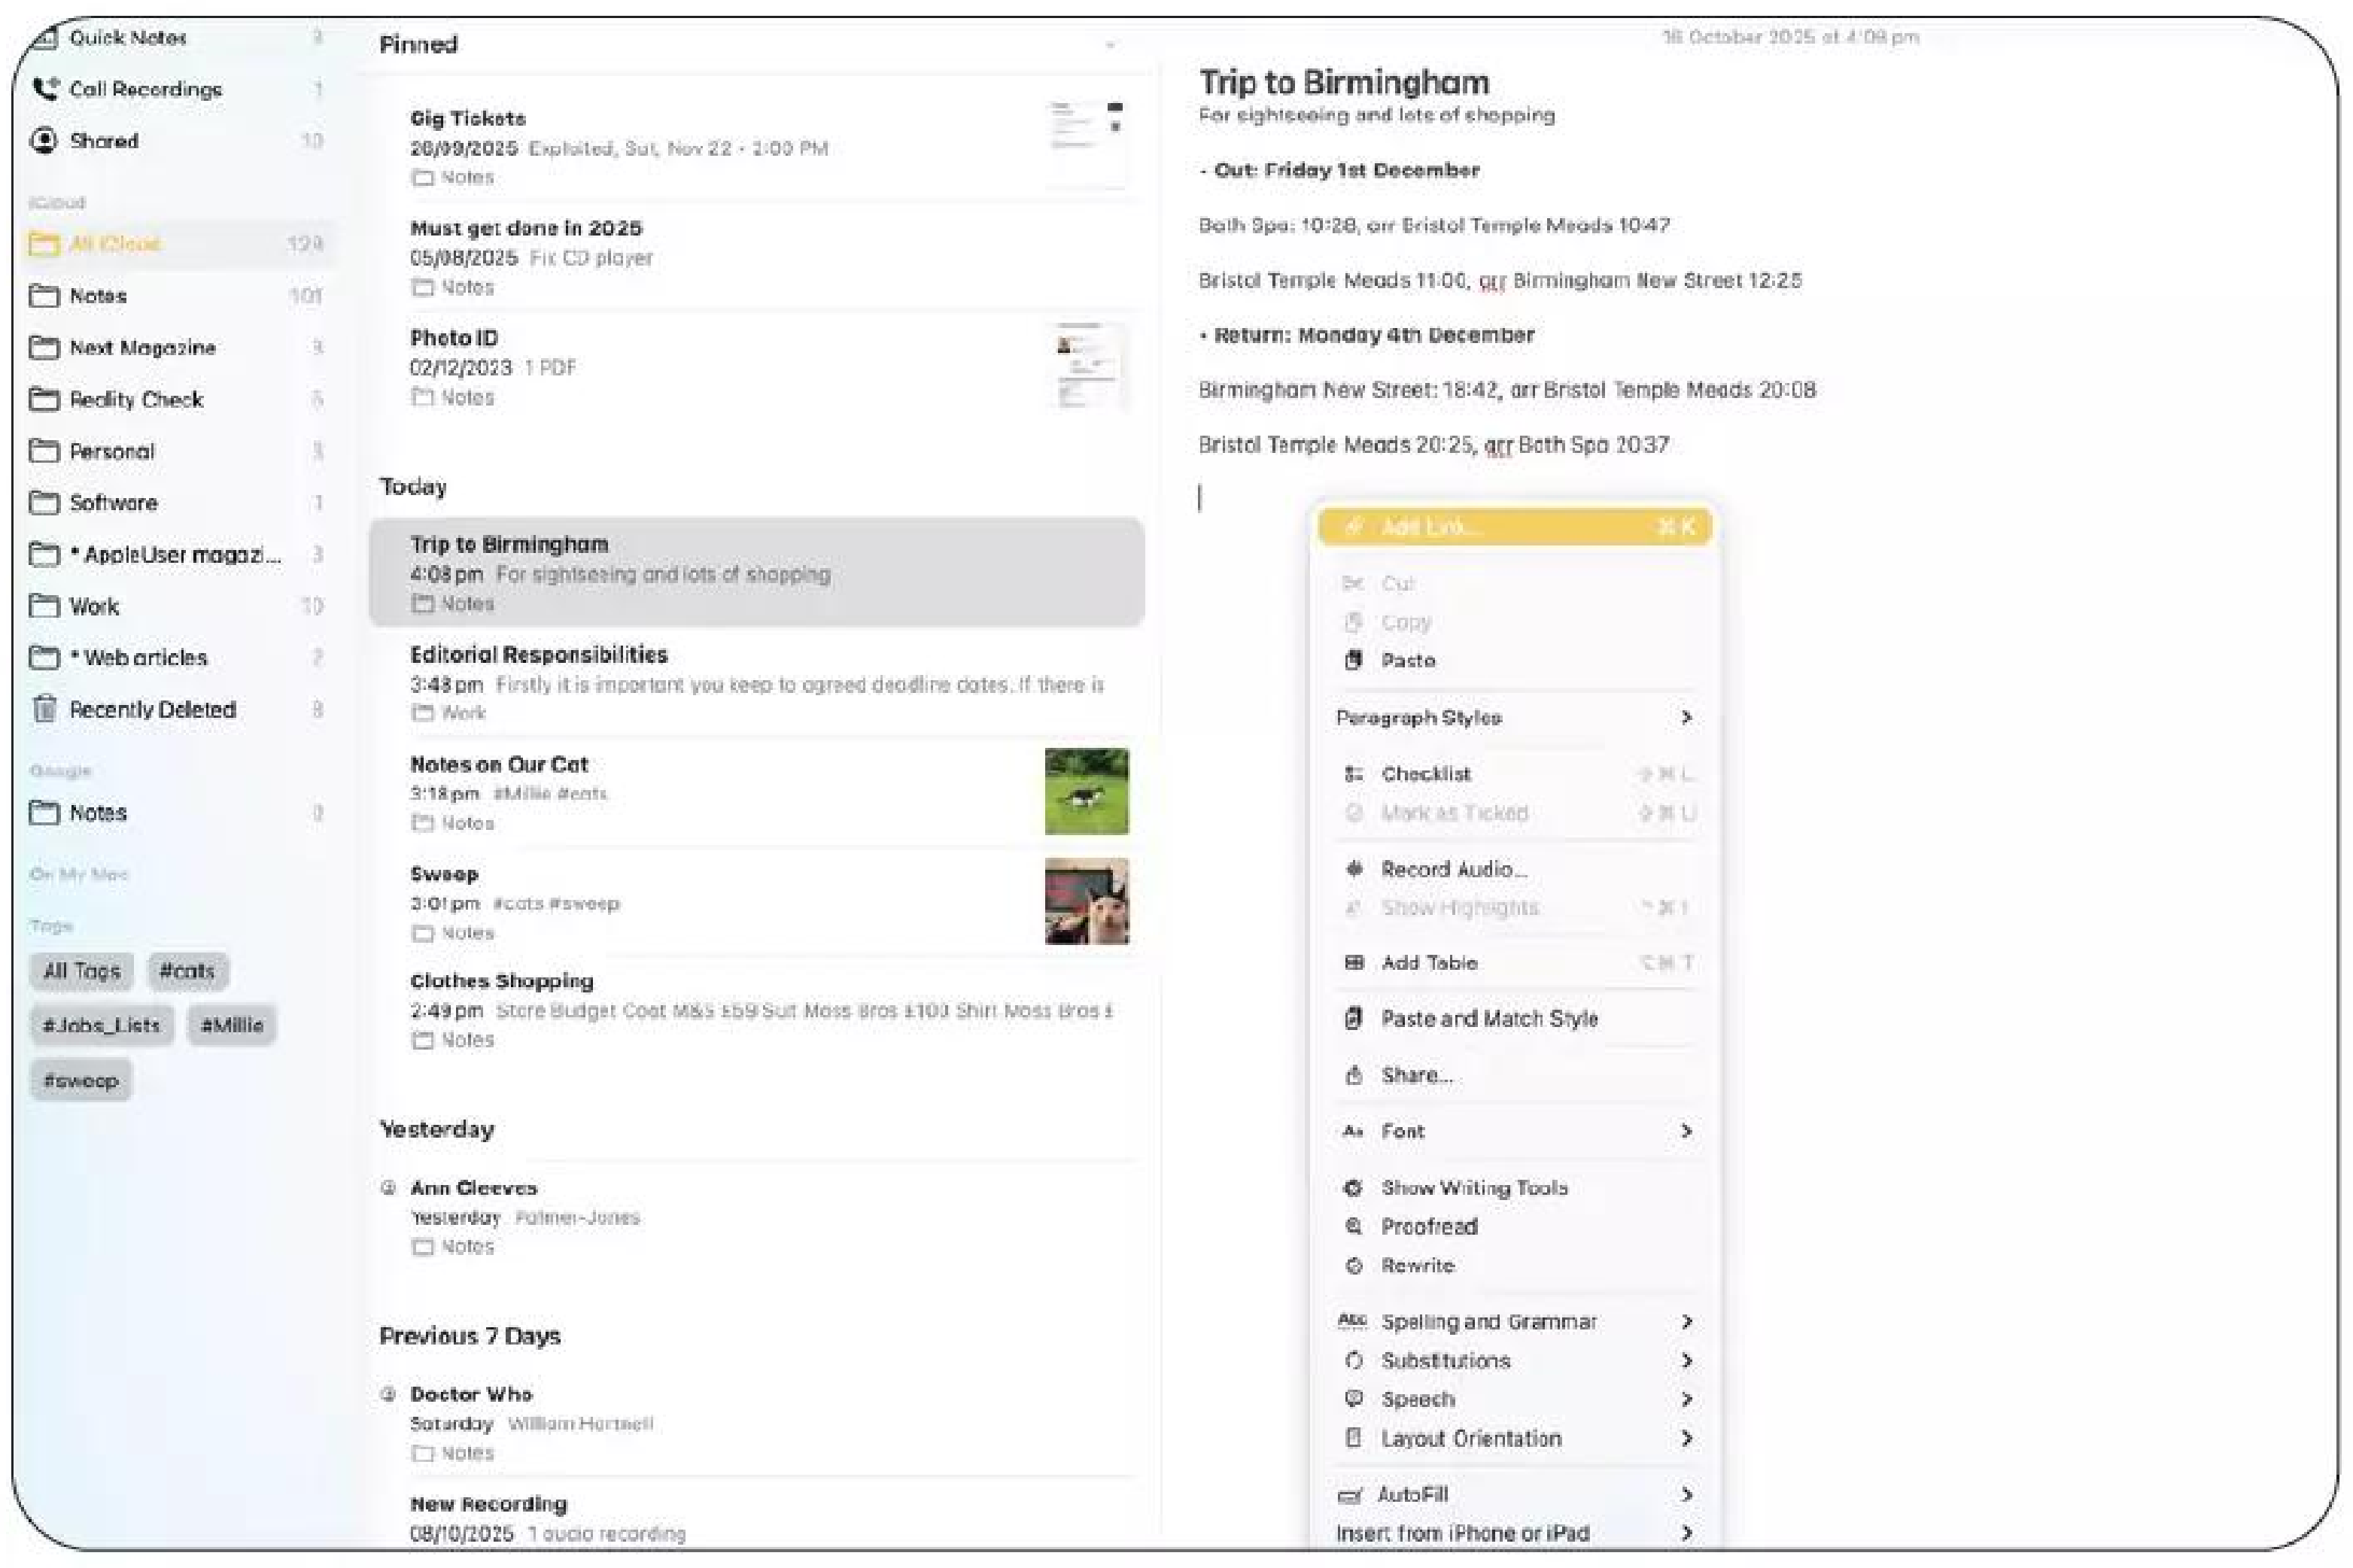




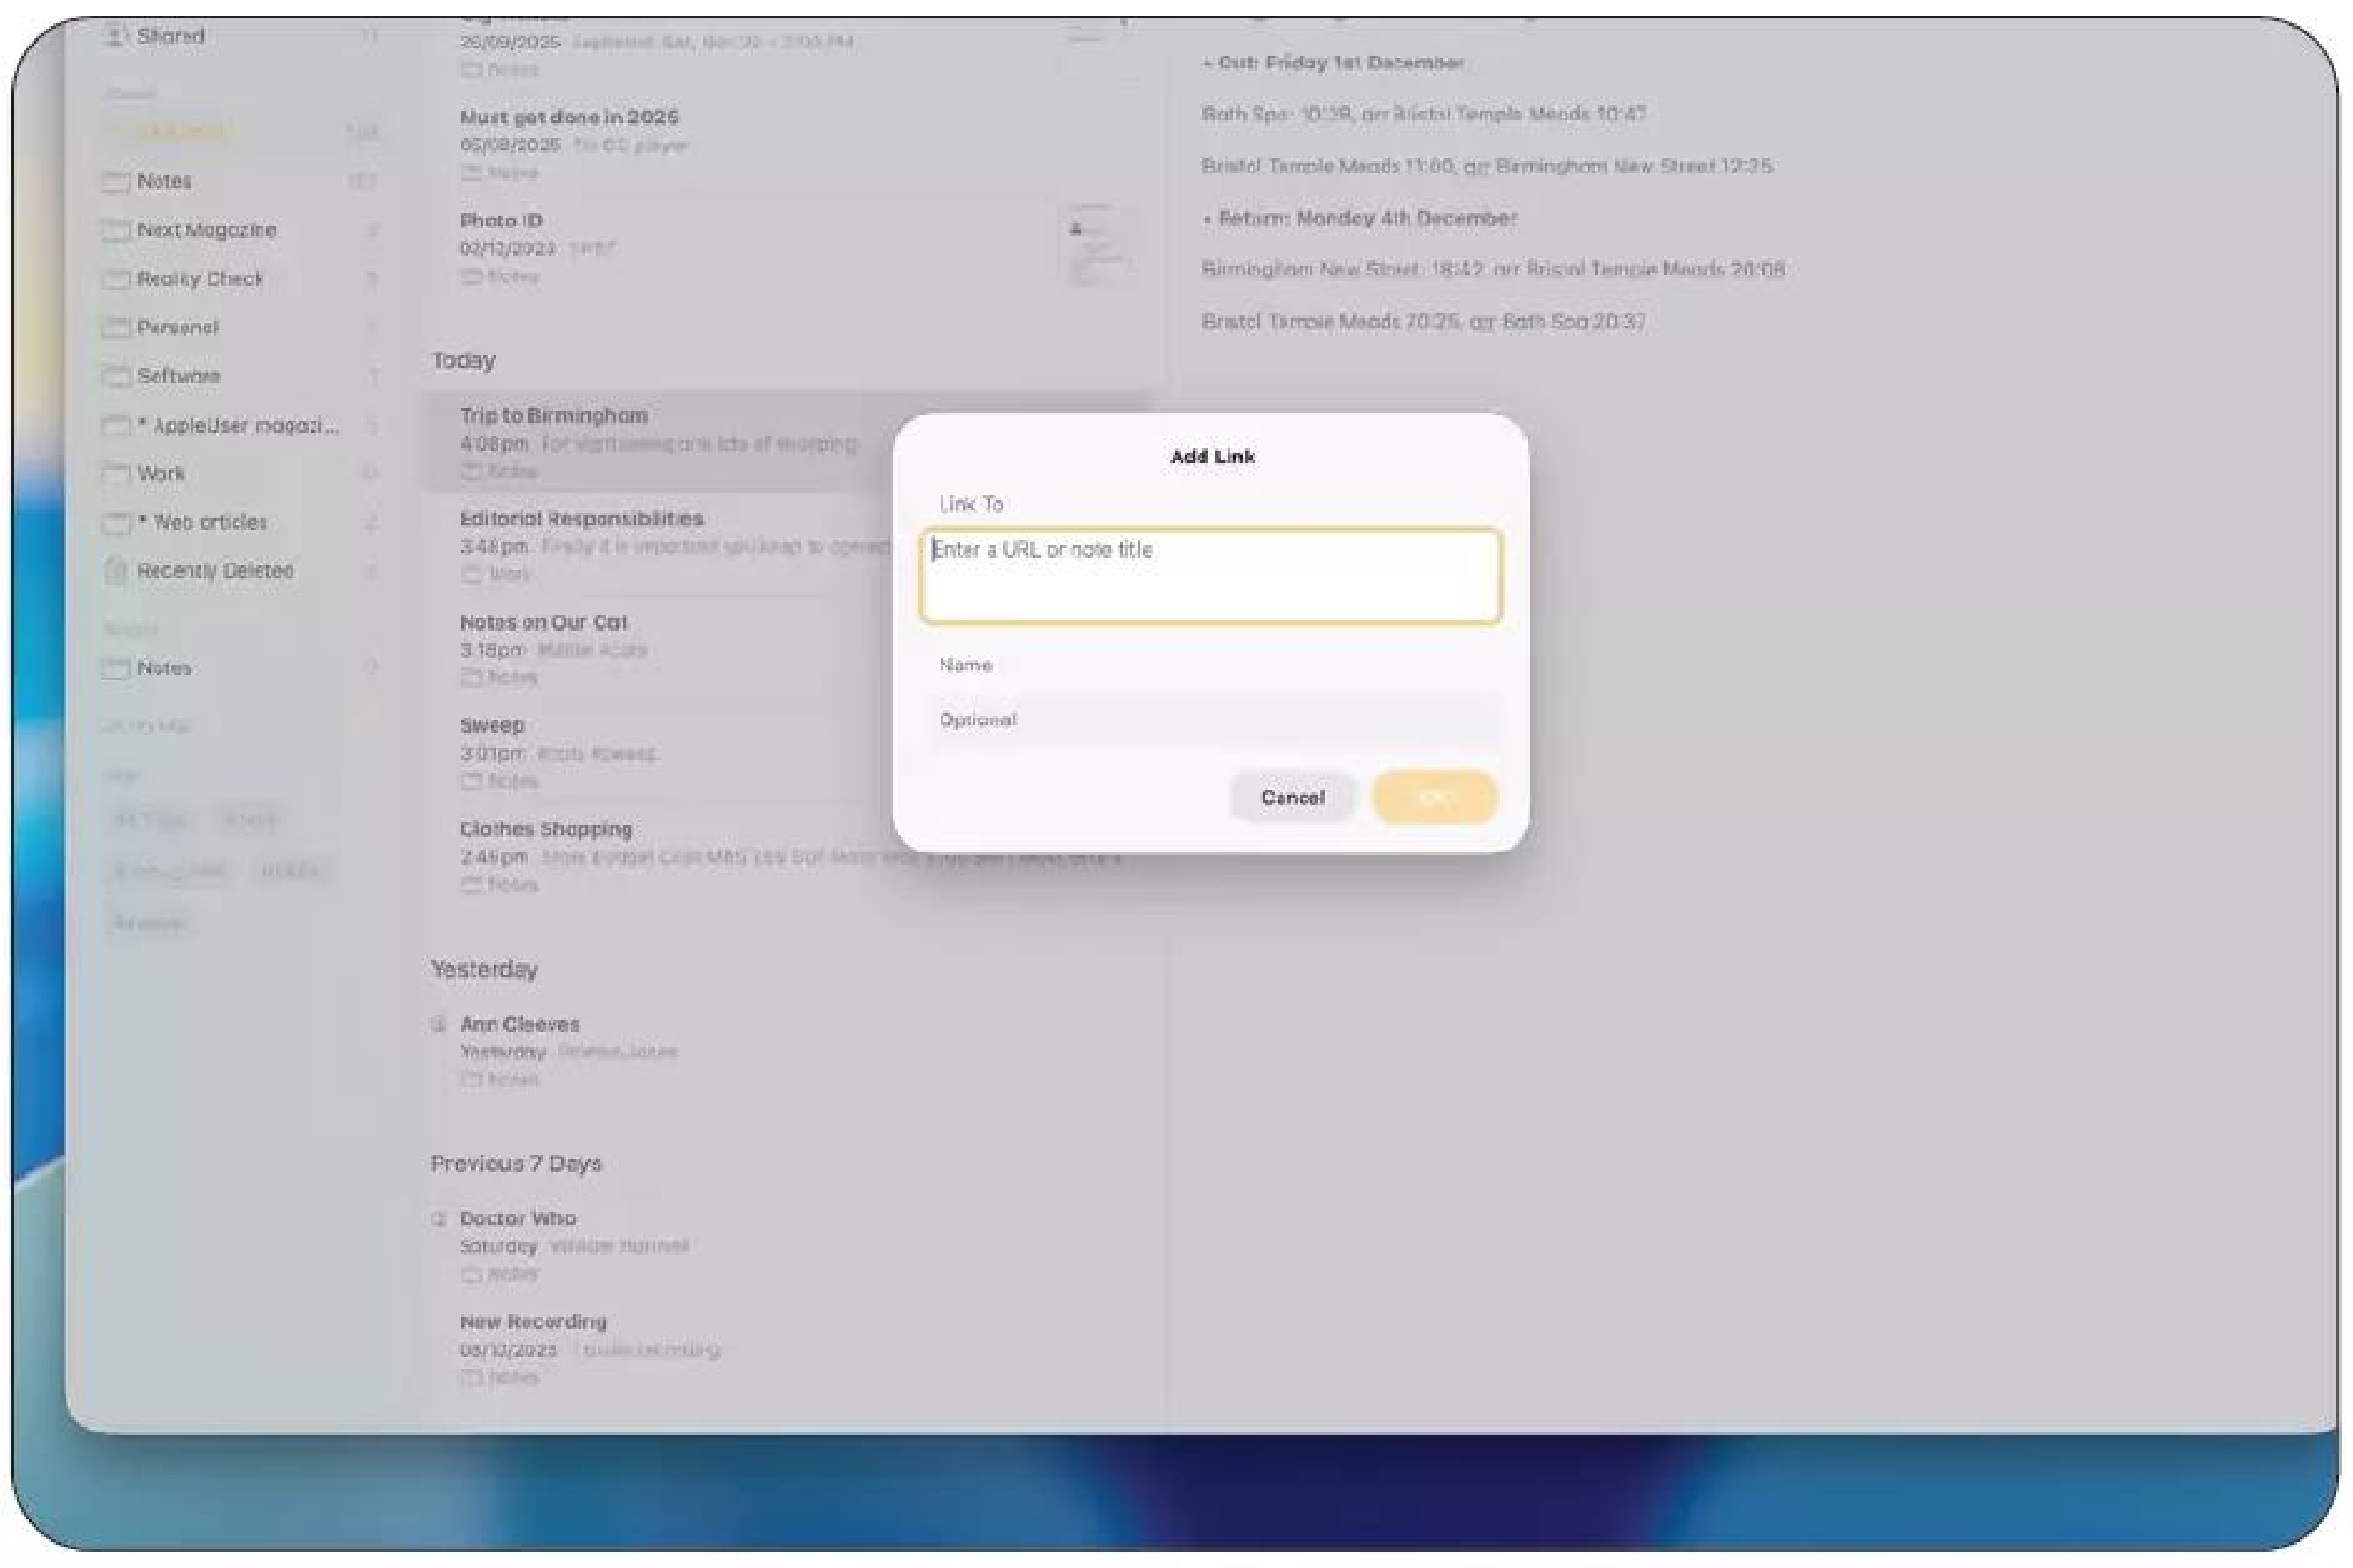
1 You can take a note in the Notes app, and move it to the Pages app if you want. All the formatting, attachments and more are retained. First open the note you want to move, and click the share icon. Select Open in Pages.

2 The note's contents then appear as a Pages document, with the title of the note used for the name of the document. The note doesn't disappear from the Notes app, but edits made in one app aren't synced with the other.

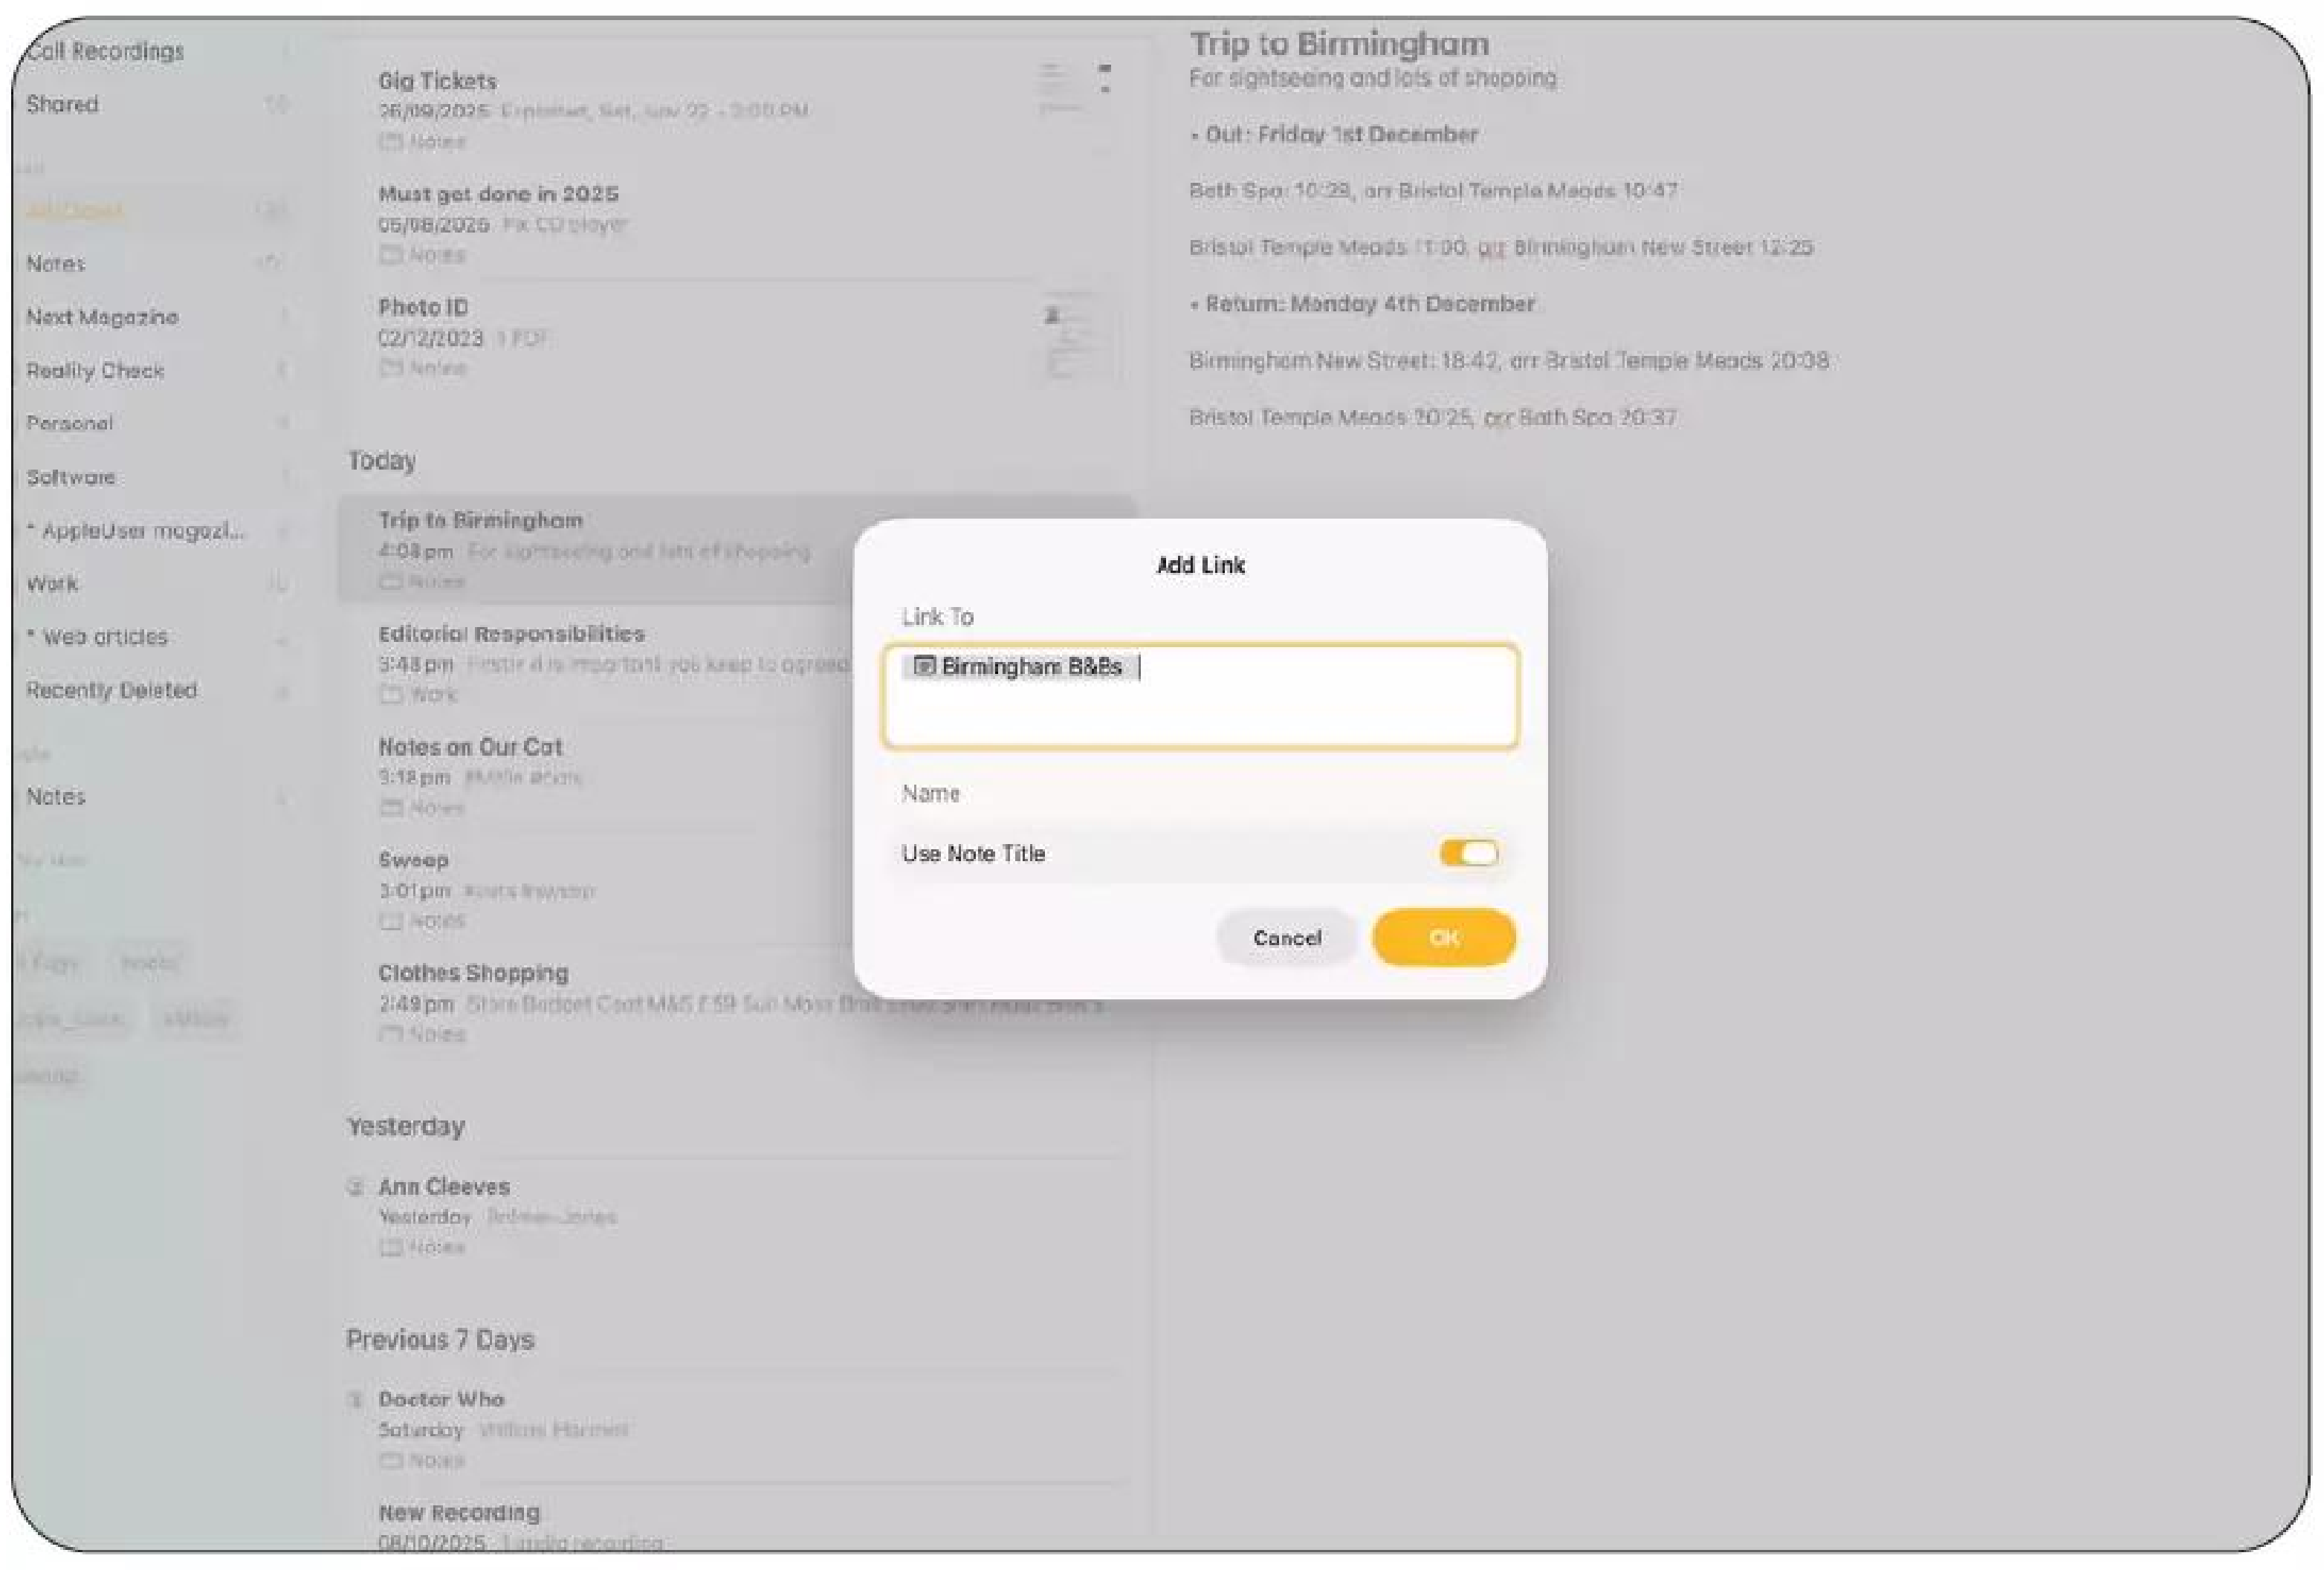
Link Notes



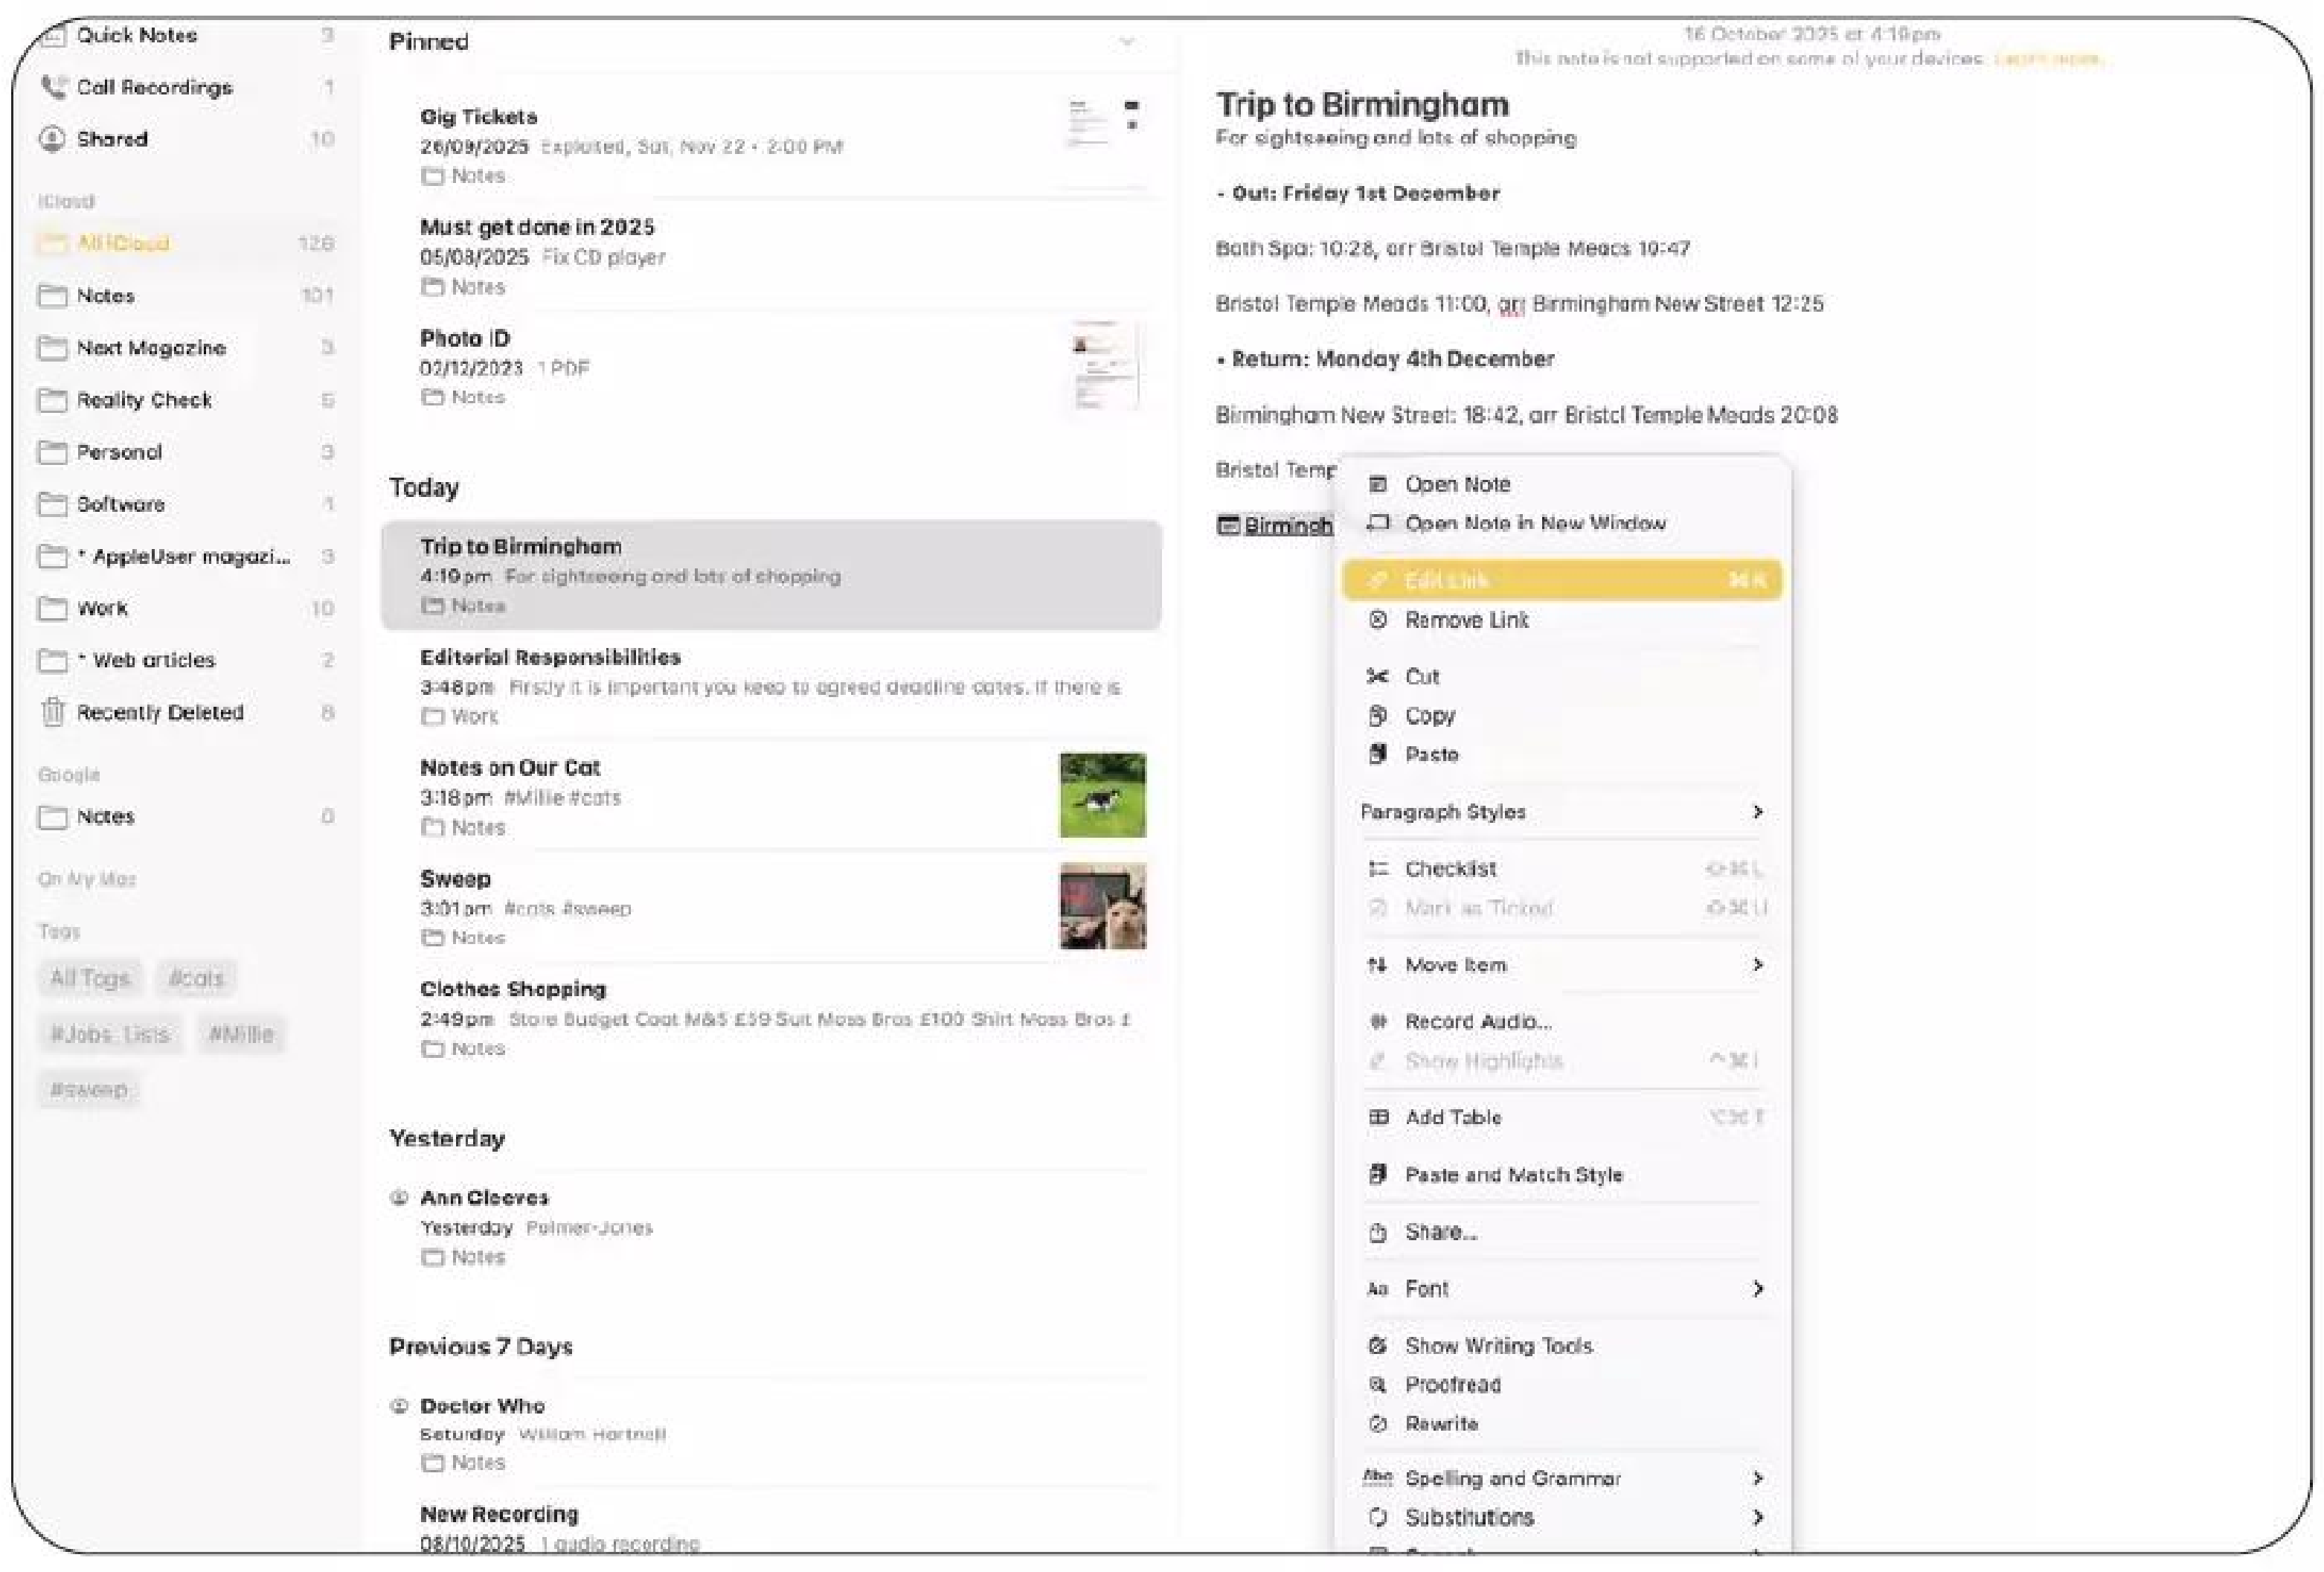
1 You can link notes to each other, taking a note and adding a link to another note to it. When you click on this link, you're then taken directly to the note it's been linked to. First open the note to which you want to add the link.



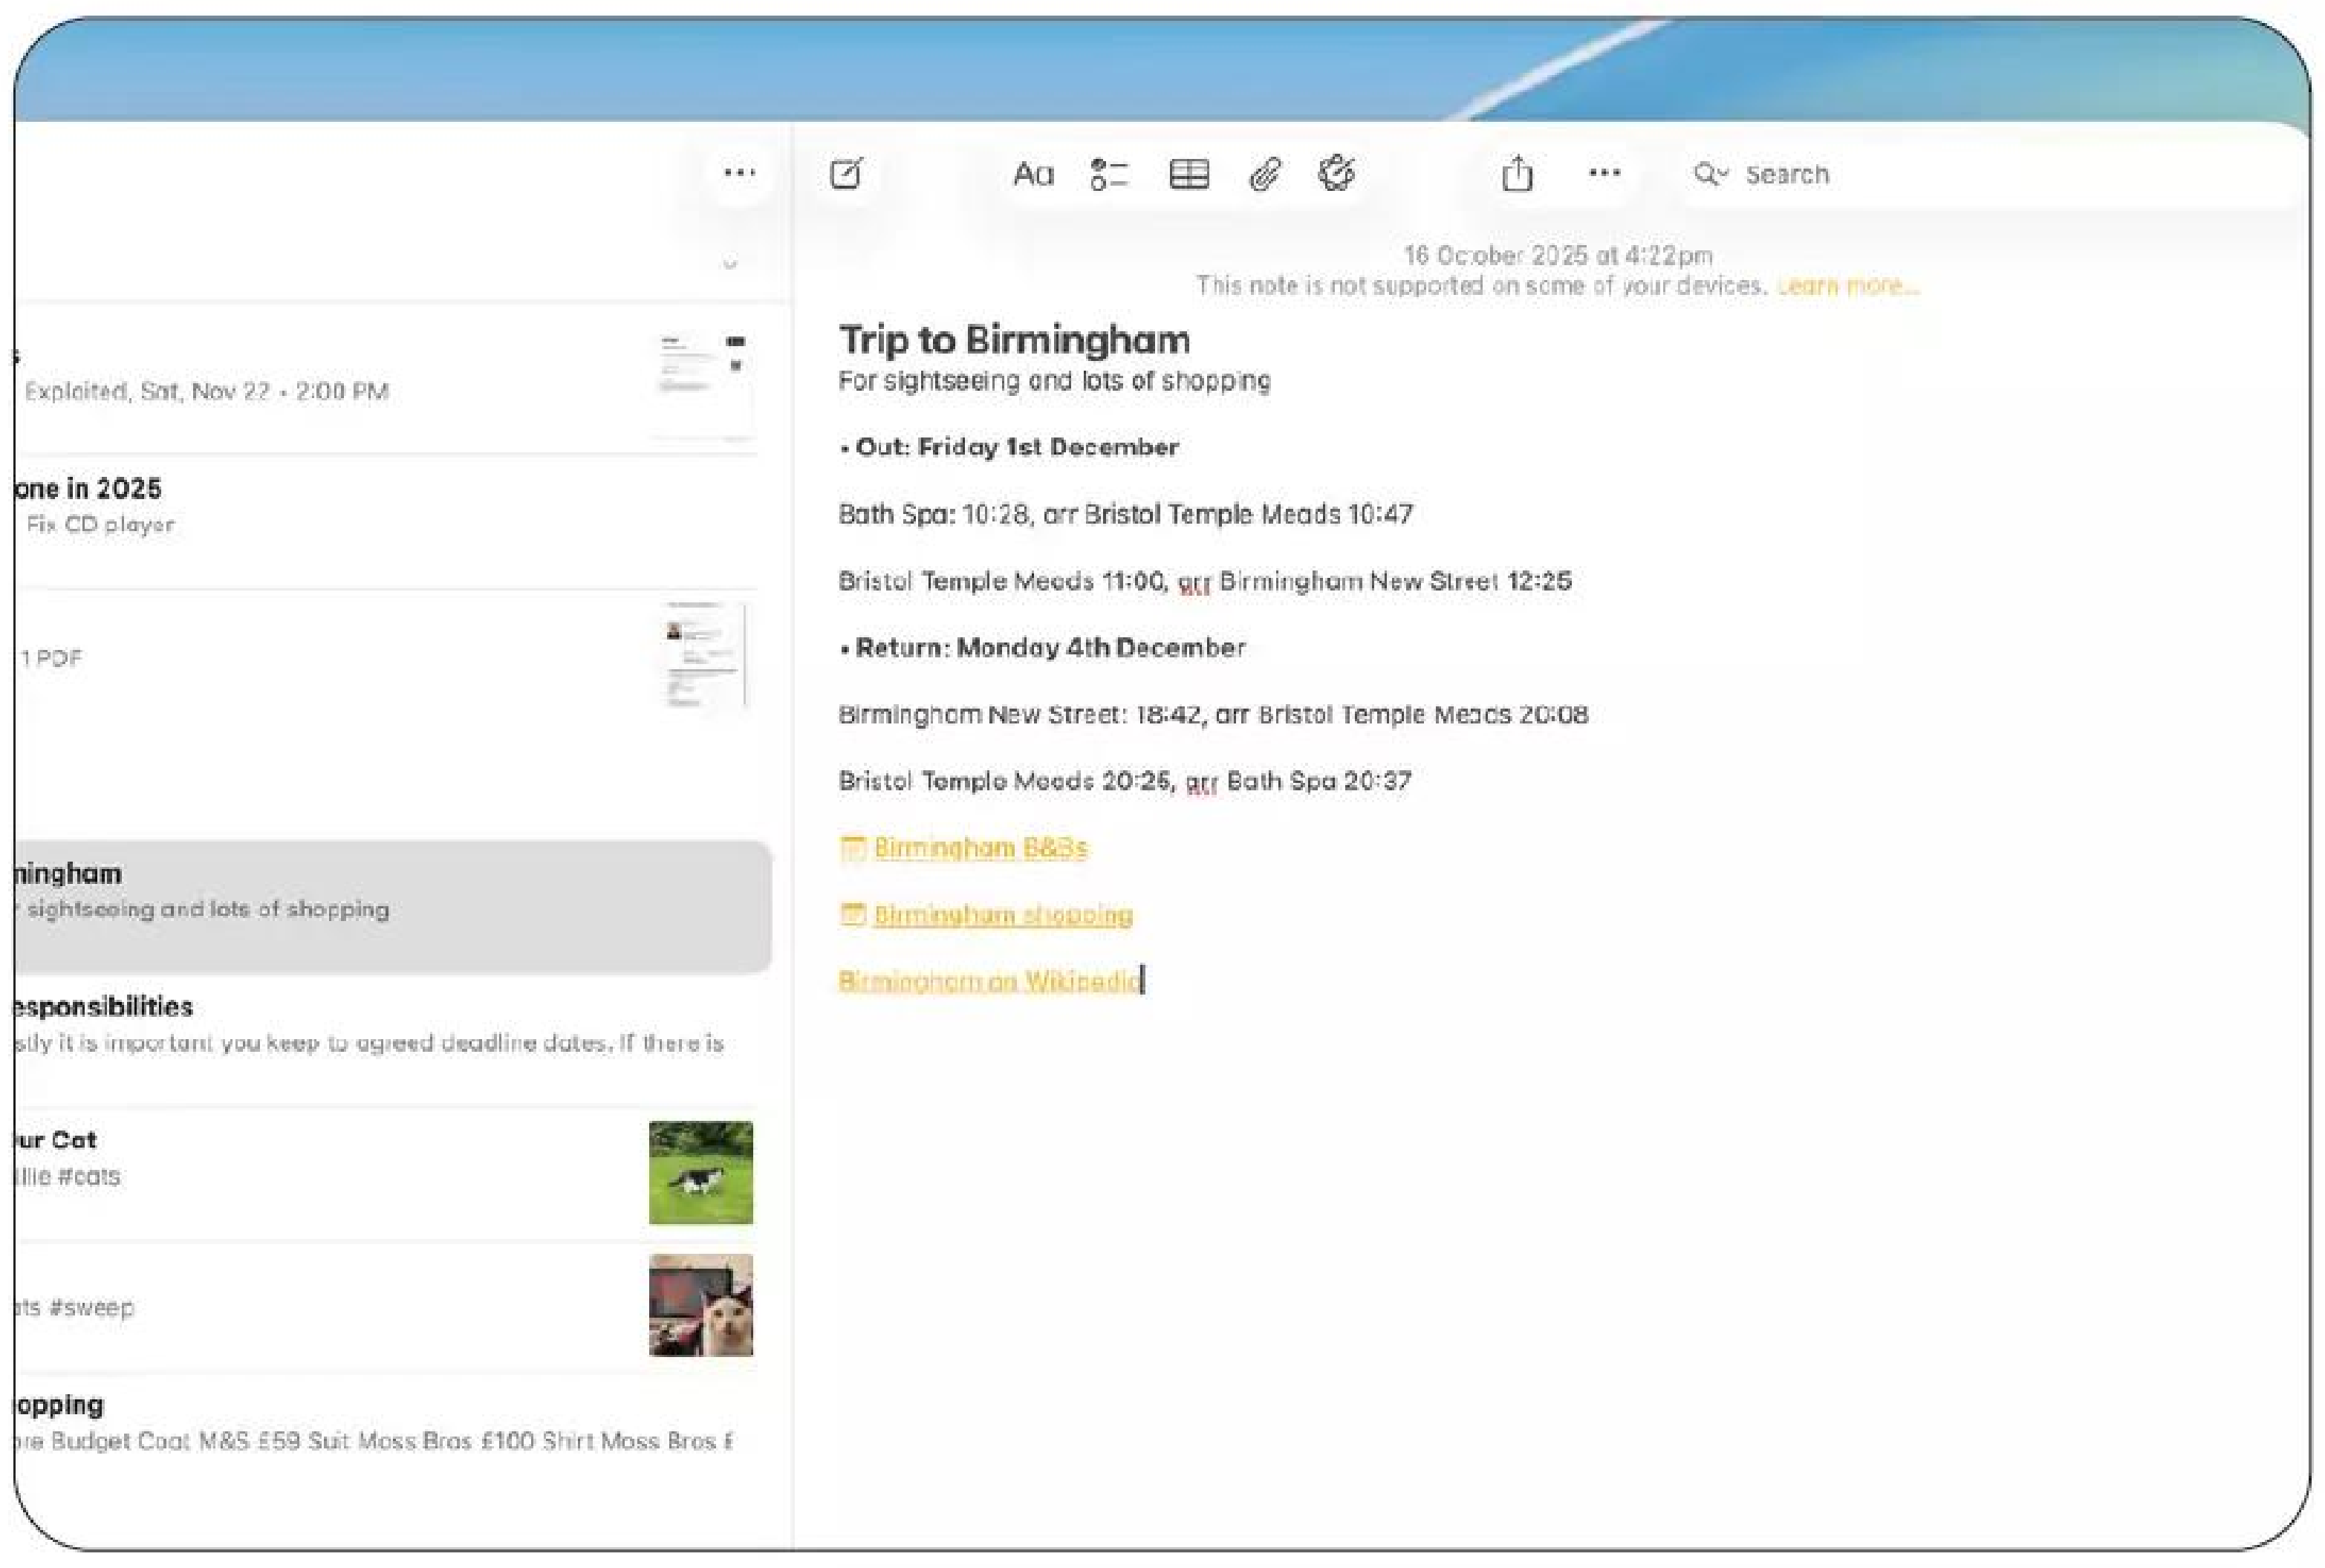
2 Here we're planning a weekend away, and want to link notes about attractions to the 'main' holiday note showing the train times and B&B details. Right/ctrl click where you want to add the link, and choose Add Link. Or press CMD-K.



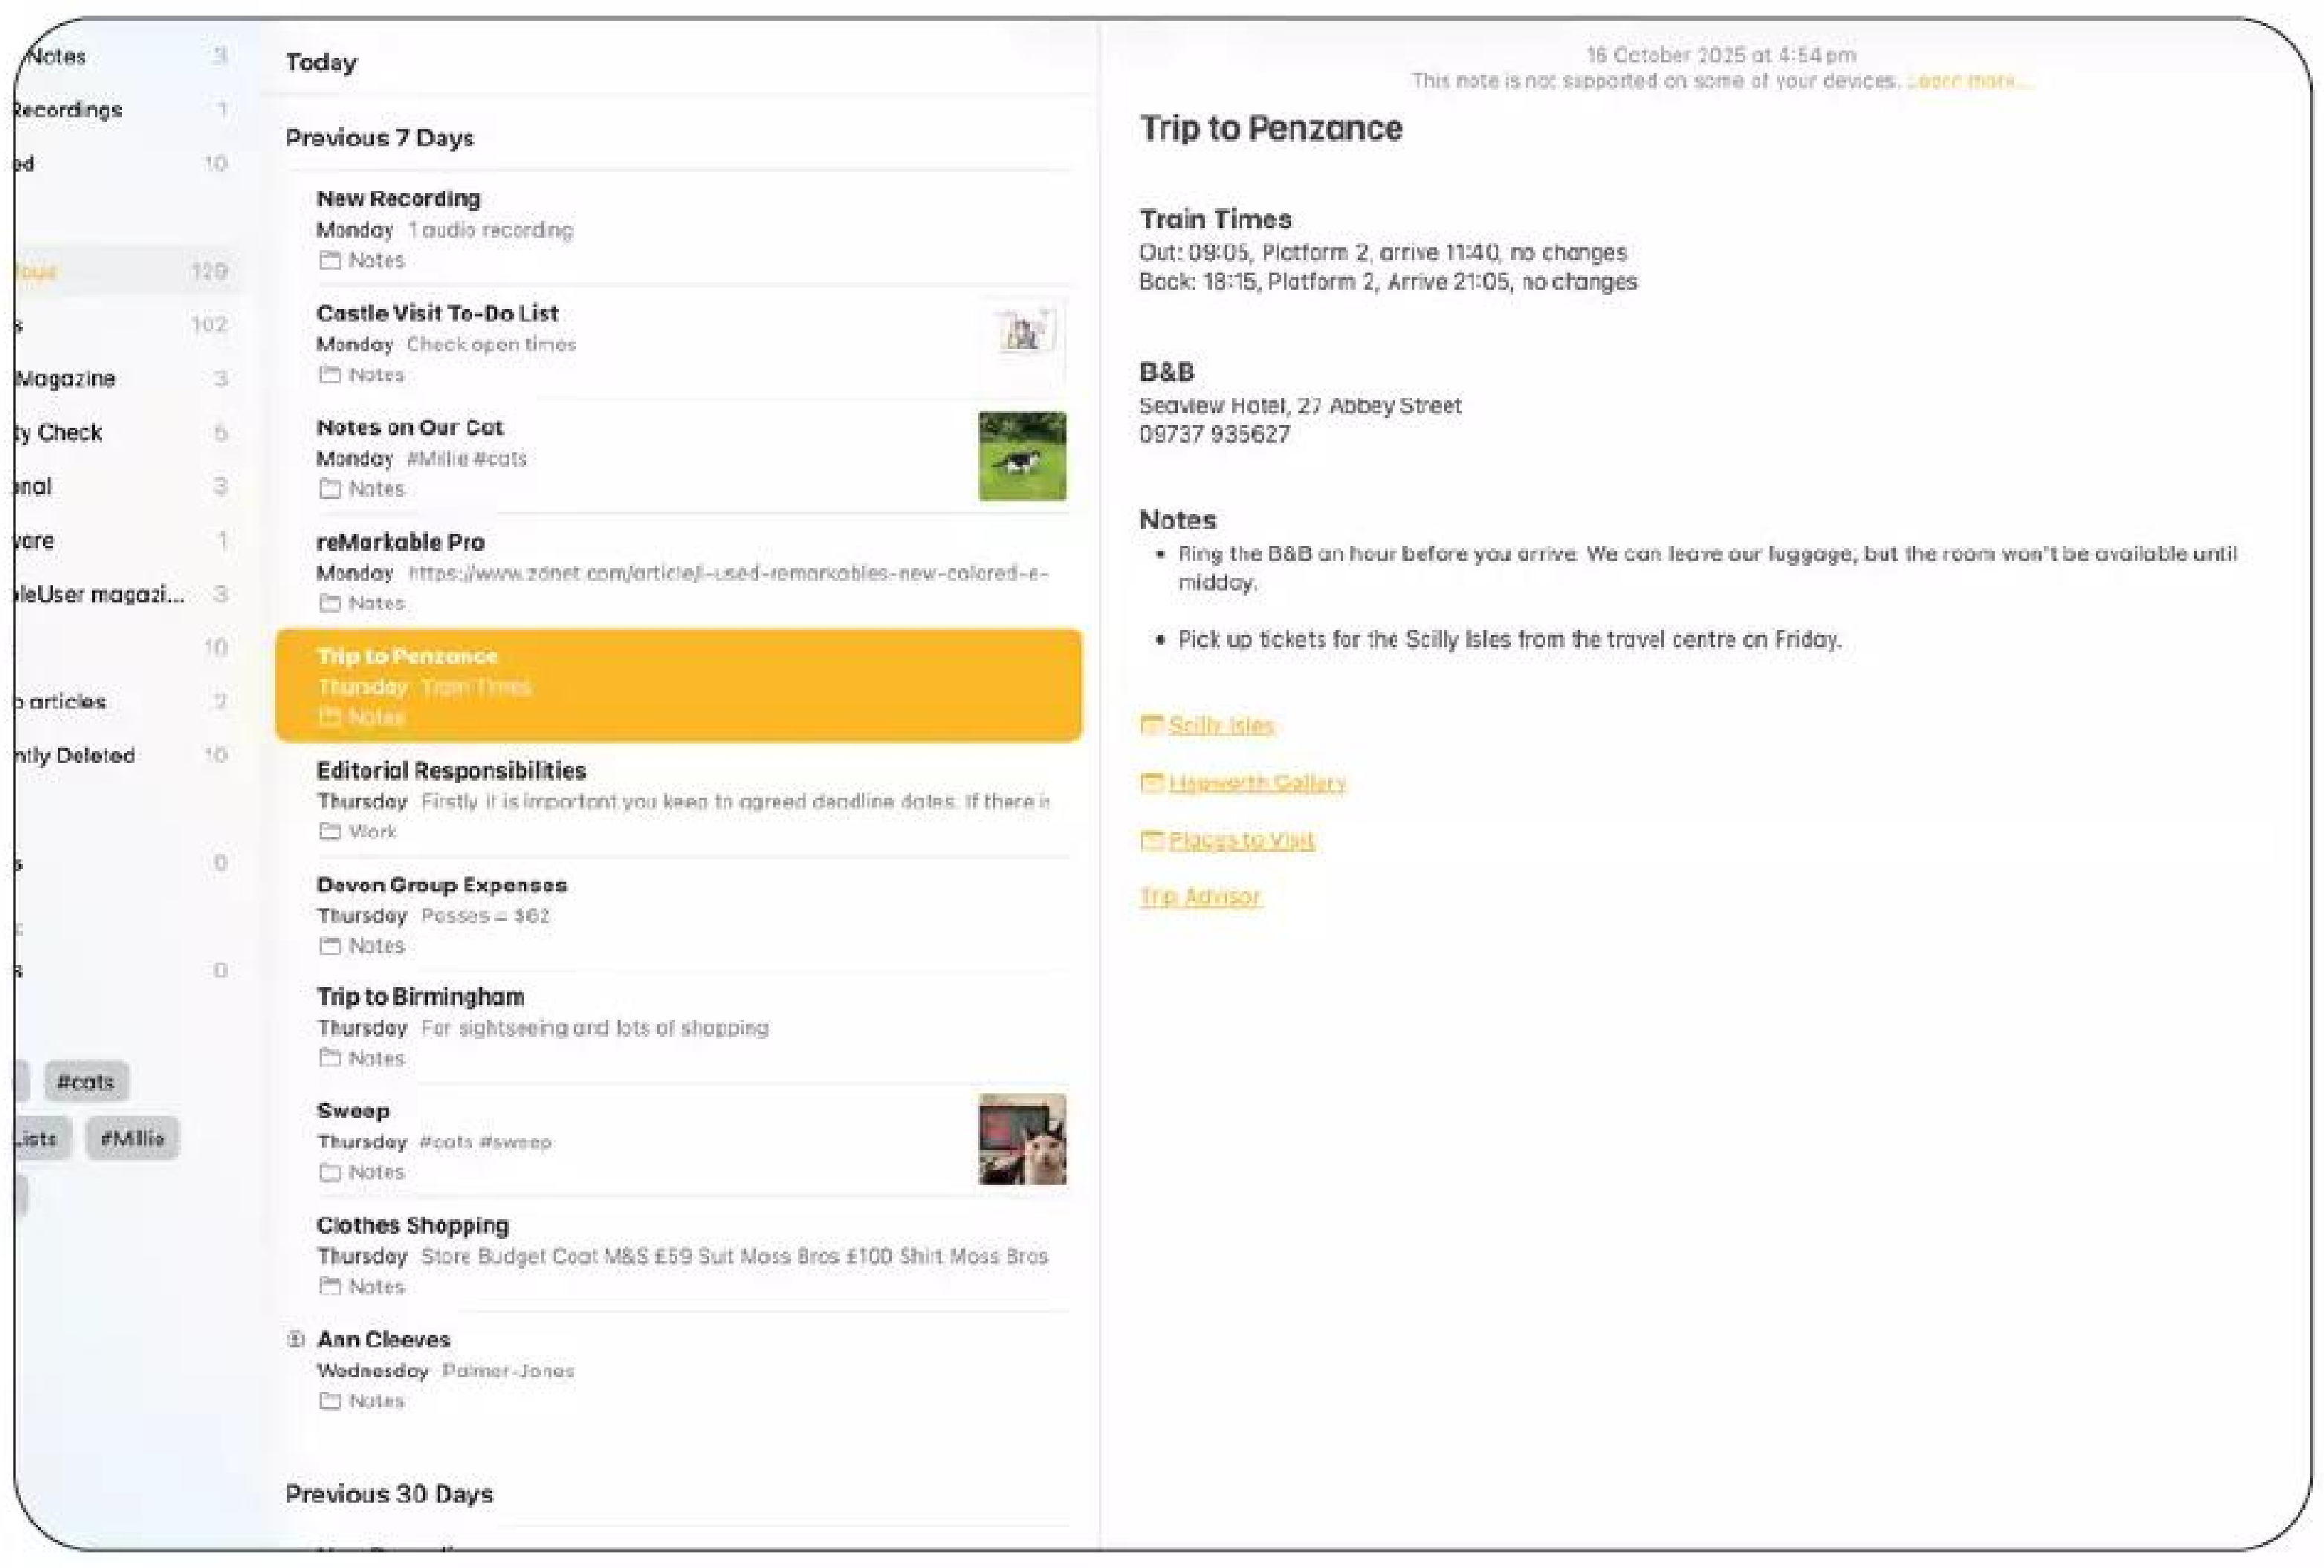
3 A window opens. In the top field, type or paste the name of the note or the URL you want to link to. If you're typing a note title, completion options are soon displayed. Click on one to finish the title, or simply type the rest of it.



4 By default, the Use Note Title option is checked. Uncheck it if you want to use something different for the link text, and type in whatever you want in the Name field. If you're adding a URL as a link, you have to type a name.



5 A link is now shown on your note. Click it and the URL or the note you linked to is displayed. If you need to edit the link after you've created it, right/ctrl-click on the link and choose the Edit Link option from the contextual menu.



6 You can add as many links as you wish to a note. Here we linked several notes about things to do on our weekend away to the main note, which then acts as a cover. You can link notes to each other too by adding a link to each.

Position.

To help those if he could.

It was that simplicity that was with the heart of the man.

I think that empathy goes back to loss of his brother.

Side of singing mountains.. Growing up, my father and his.

Was this transcription useful or not useful?

1 It's now possible to make a recording in the Notes app, and have it transcribed for you as you go. It's great for lectures or meetings. Open a new note, and click the audio icon in the toolbar. When you're ready, tap the red circle icon to start recording. You can pause and resume at any time.

2 Click the red square to stop. You can play back the recording using the controls in the right-hand panel, and click the speech bubble at the foot of the left-hand panel to create a transcript. The three dots icon in the top-right offers more options, such as copying the transcript or sharing the audio.

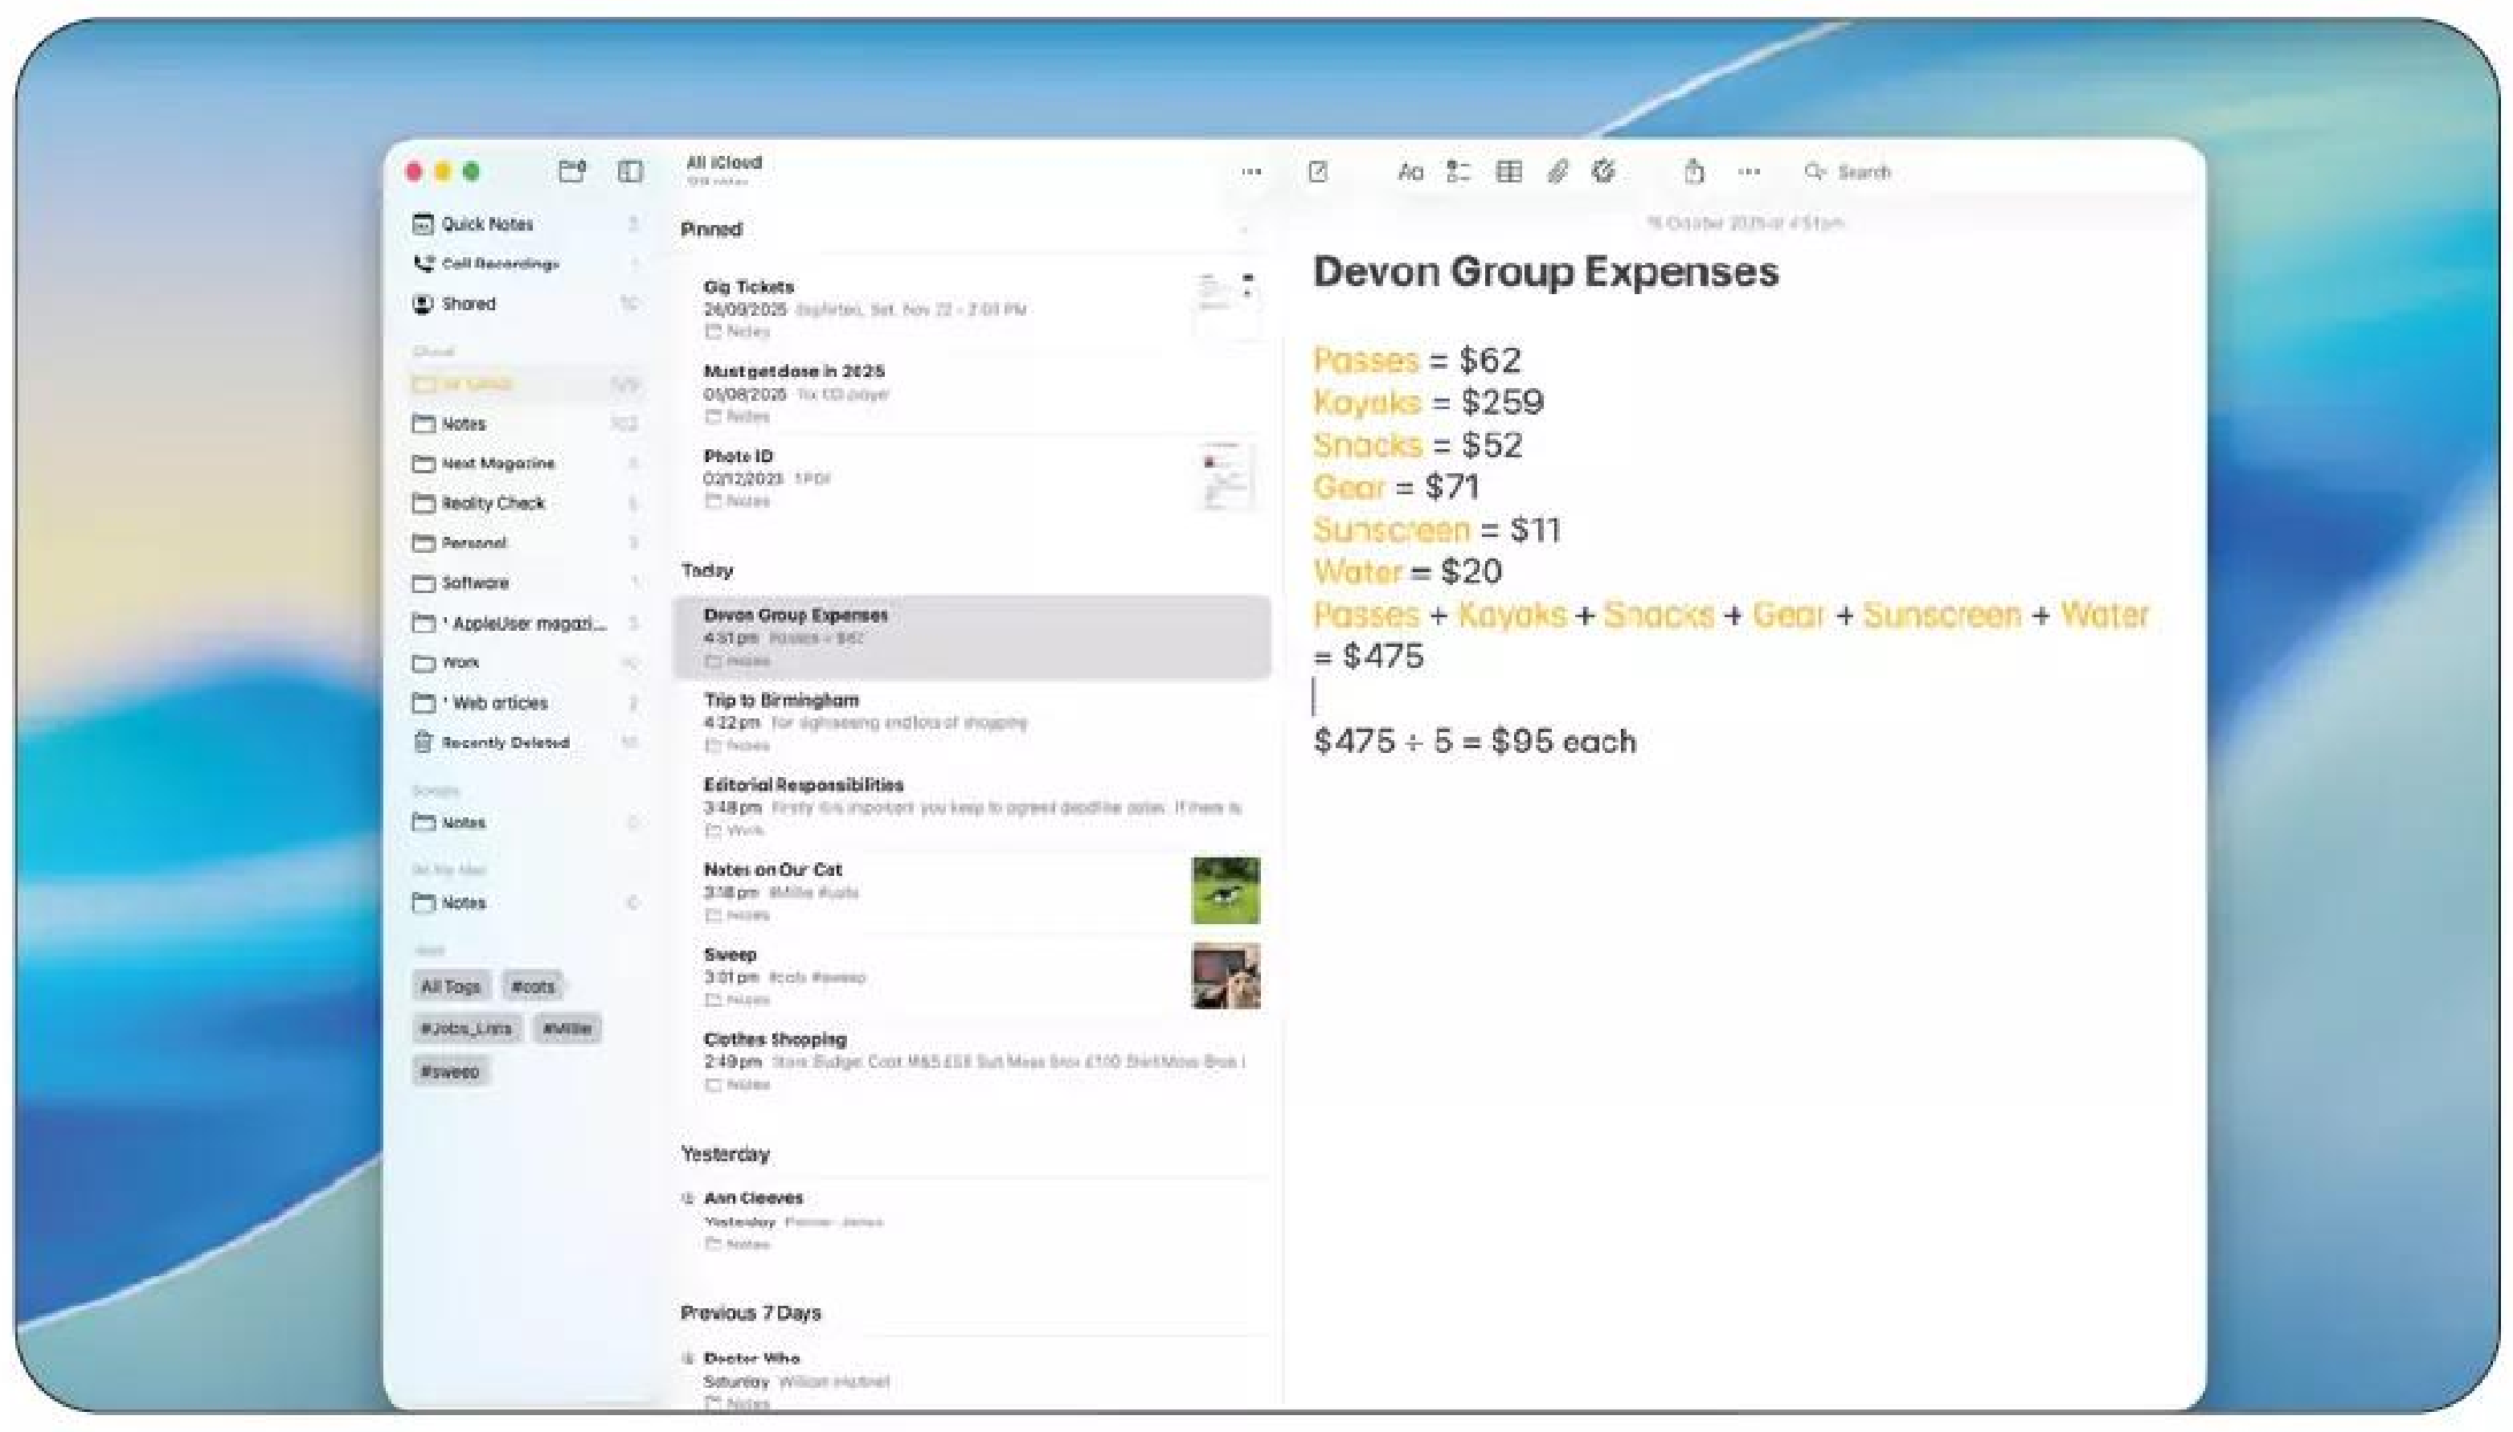
Hard Sums

(27/3)^2 = 81

47x96 = 4,512

08.23 USD



Devon Group Expenses

Passes = $62
Kayaks = $259
Snacks = $52
Gear = $71
Sunscreen = $11
Water = $20
Passes + Kayaks + Snacks + Gear + Sunscreen + Water = $475

$475 ÷ 5 = $95 each

1 If you type a sum, conversion or formula in Notes, the solution appears as soon as you add the equals sign. It's a suggestion at first, but is added when you tap Return. To add a Maths Notes folder to your folders, right-click on the note and go to Move to > [Section] > Maths Notes.

2 You can also define variables, like we've done here. Each item in the shared costs list is given a price, prefixed by another equals sign. The word changes colour to show it's been accepted as a variable. We can now do sums using the variables instead of their numeric values.

Hover over a header in a note and you see a chevron appear. Click it to collapse that section, making the note more easily navigable. A collapsed section always has a chevron to the left of the header; click on it to expand it again.

Audio Processing in Notes

Apple's popular Notes app gains some great new features that use Apple Intelligence. We've already covered Writing Tools, so here we take a look at the new audio processing tools, which let you record a meeting or a lecture in the Notes app, and then use Apple Intelligence to transcribe what was said, offering it to you in ordinary text.

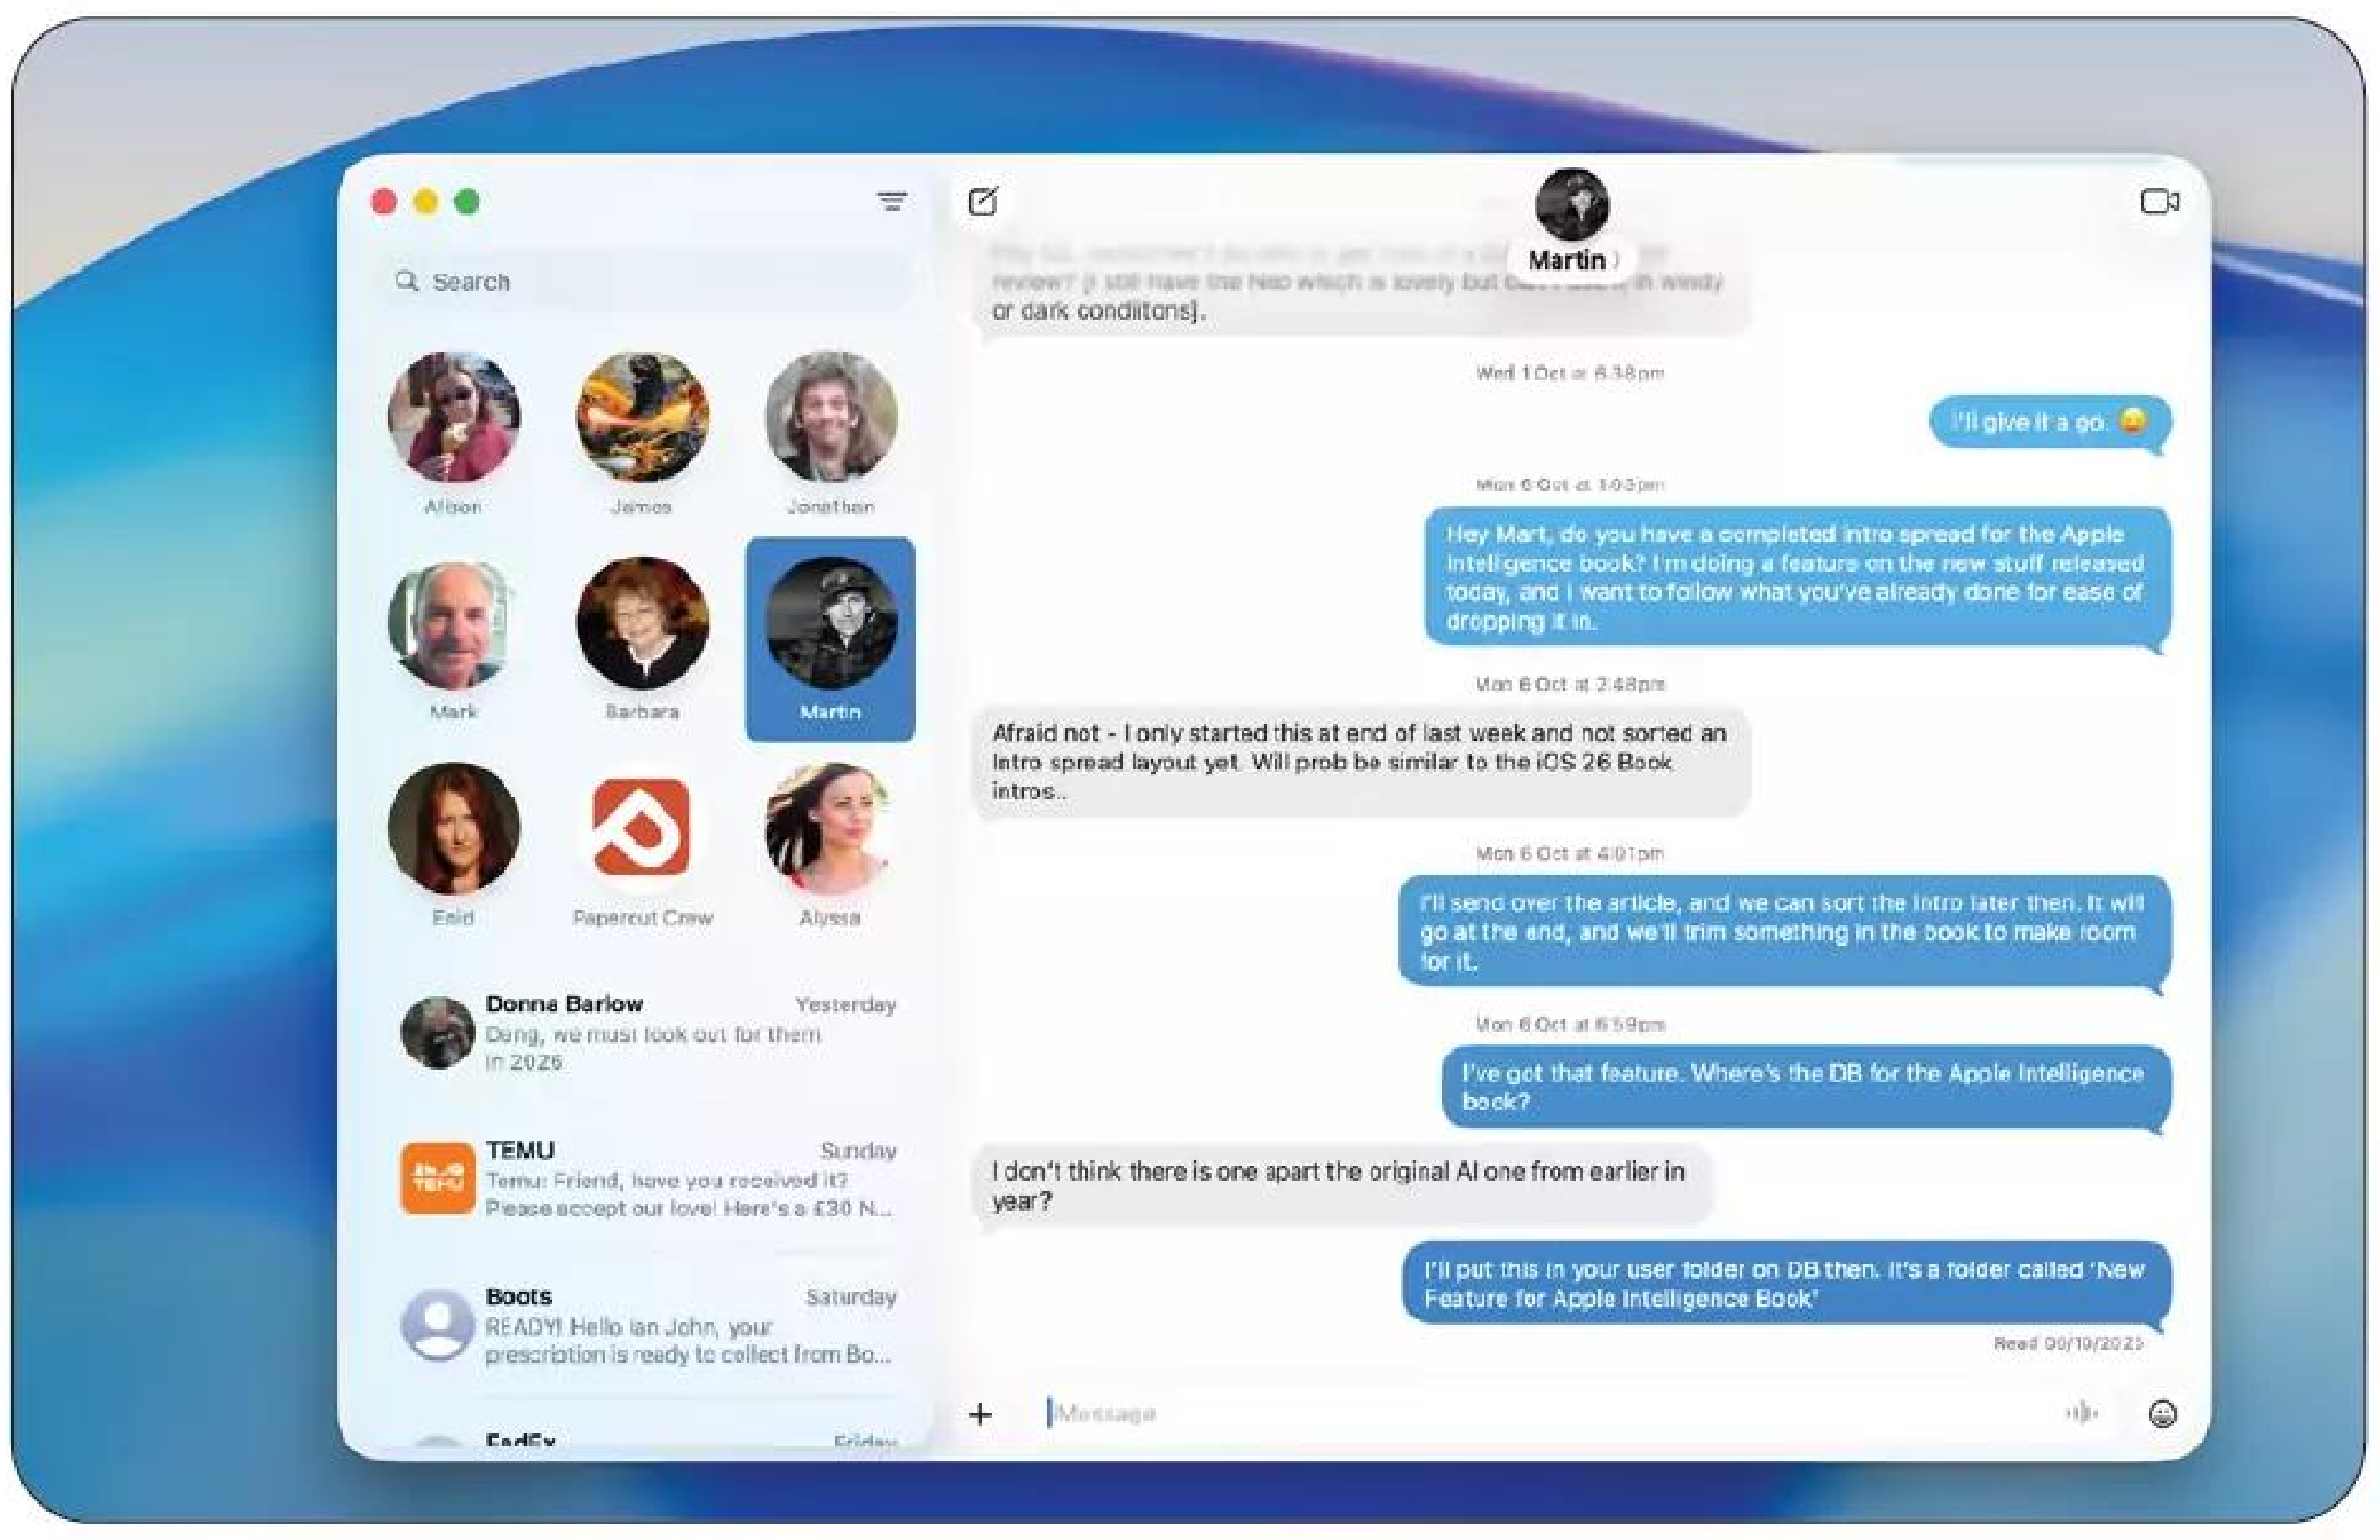
Lots of pics of the lovely B



or dark conditons].

Wed 1 Oct at 6:38pm

I'll give it a go.

Mon 6 Oct at 1:03pm

Hey Mart, do you have a completed intro spread for the Apple Intelligence book? I'm doing a feature on the new stuff released today, and I want to follow what you've already done for ease of dropping it in.

Mon 6 Oct at 2:48pm

Afraid not - I only started this at end of last week and not sorted an Intro spread layout yet. Will prob be similar to the iOS 26 Book intros..

Mon 6 Oct at 4:01pm

I'll send over the article, and we can sort the intro later then. It will go at the end, and we'll trim something in the book to make room for it.

Mon 6 Oct at 6:59pm

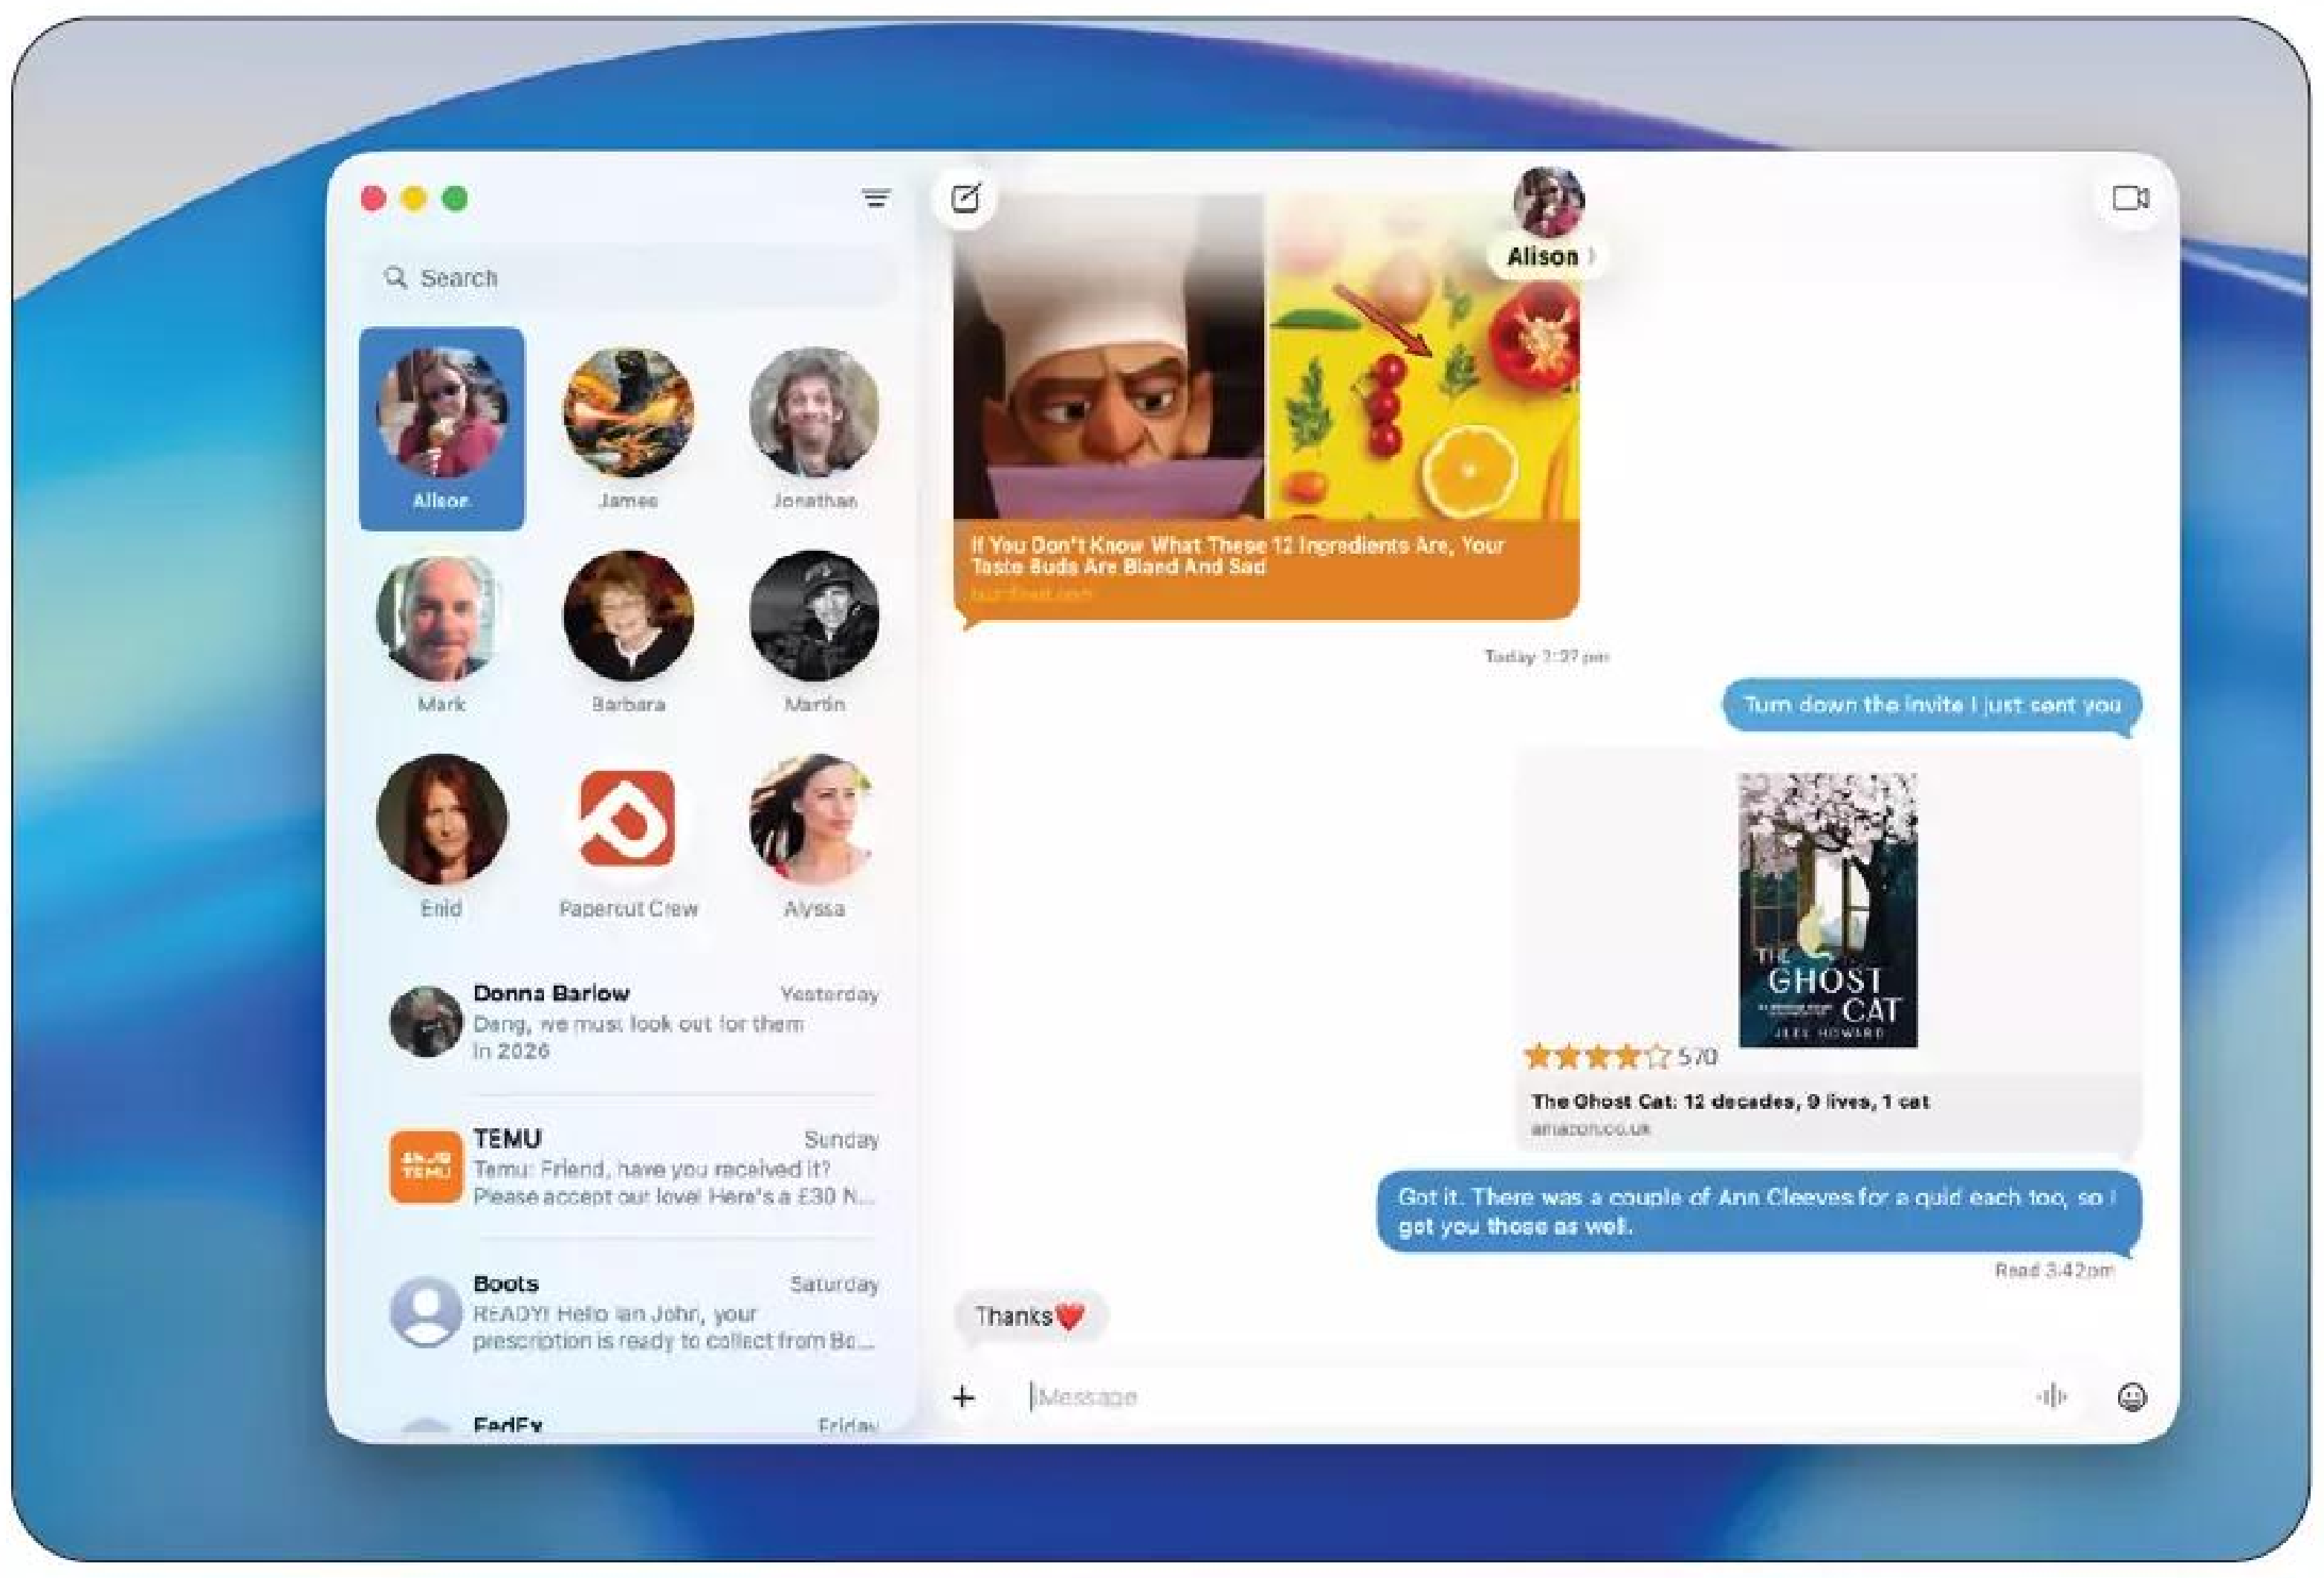
I've got that feature. Where's the DB for the Apple Intelligence book?

I don't think there is one apart the original AI one from earlier in year?

I'll put this in your user folder on DB then. It's a folder called 'New Feature for Apple Intelligence Book'

Read 06/10/2025

4 When conversing, messages you've sent are shown on the right-hand side of the conversation window, and replies are shown in grey on the left. Under your last message, you're shown when it was read. While your contact is typing, a three-dots speech bubble is shown.



If You Don't Know What These 12 Ingredients Are, Your Taste Buds Are Bland And Sad

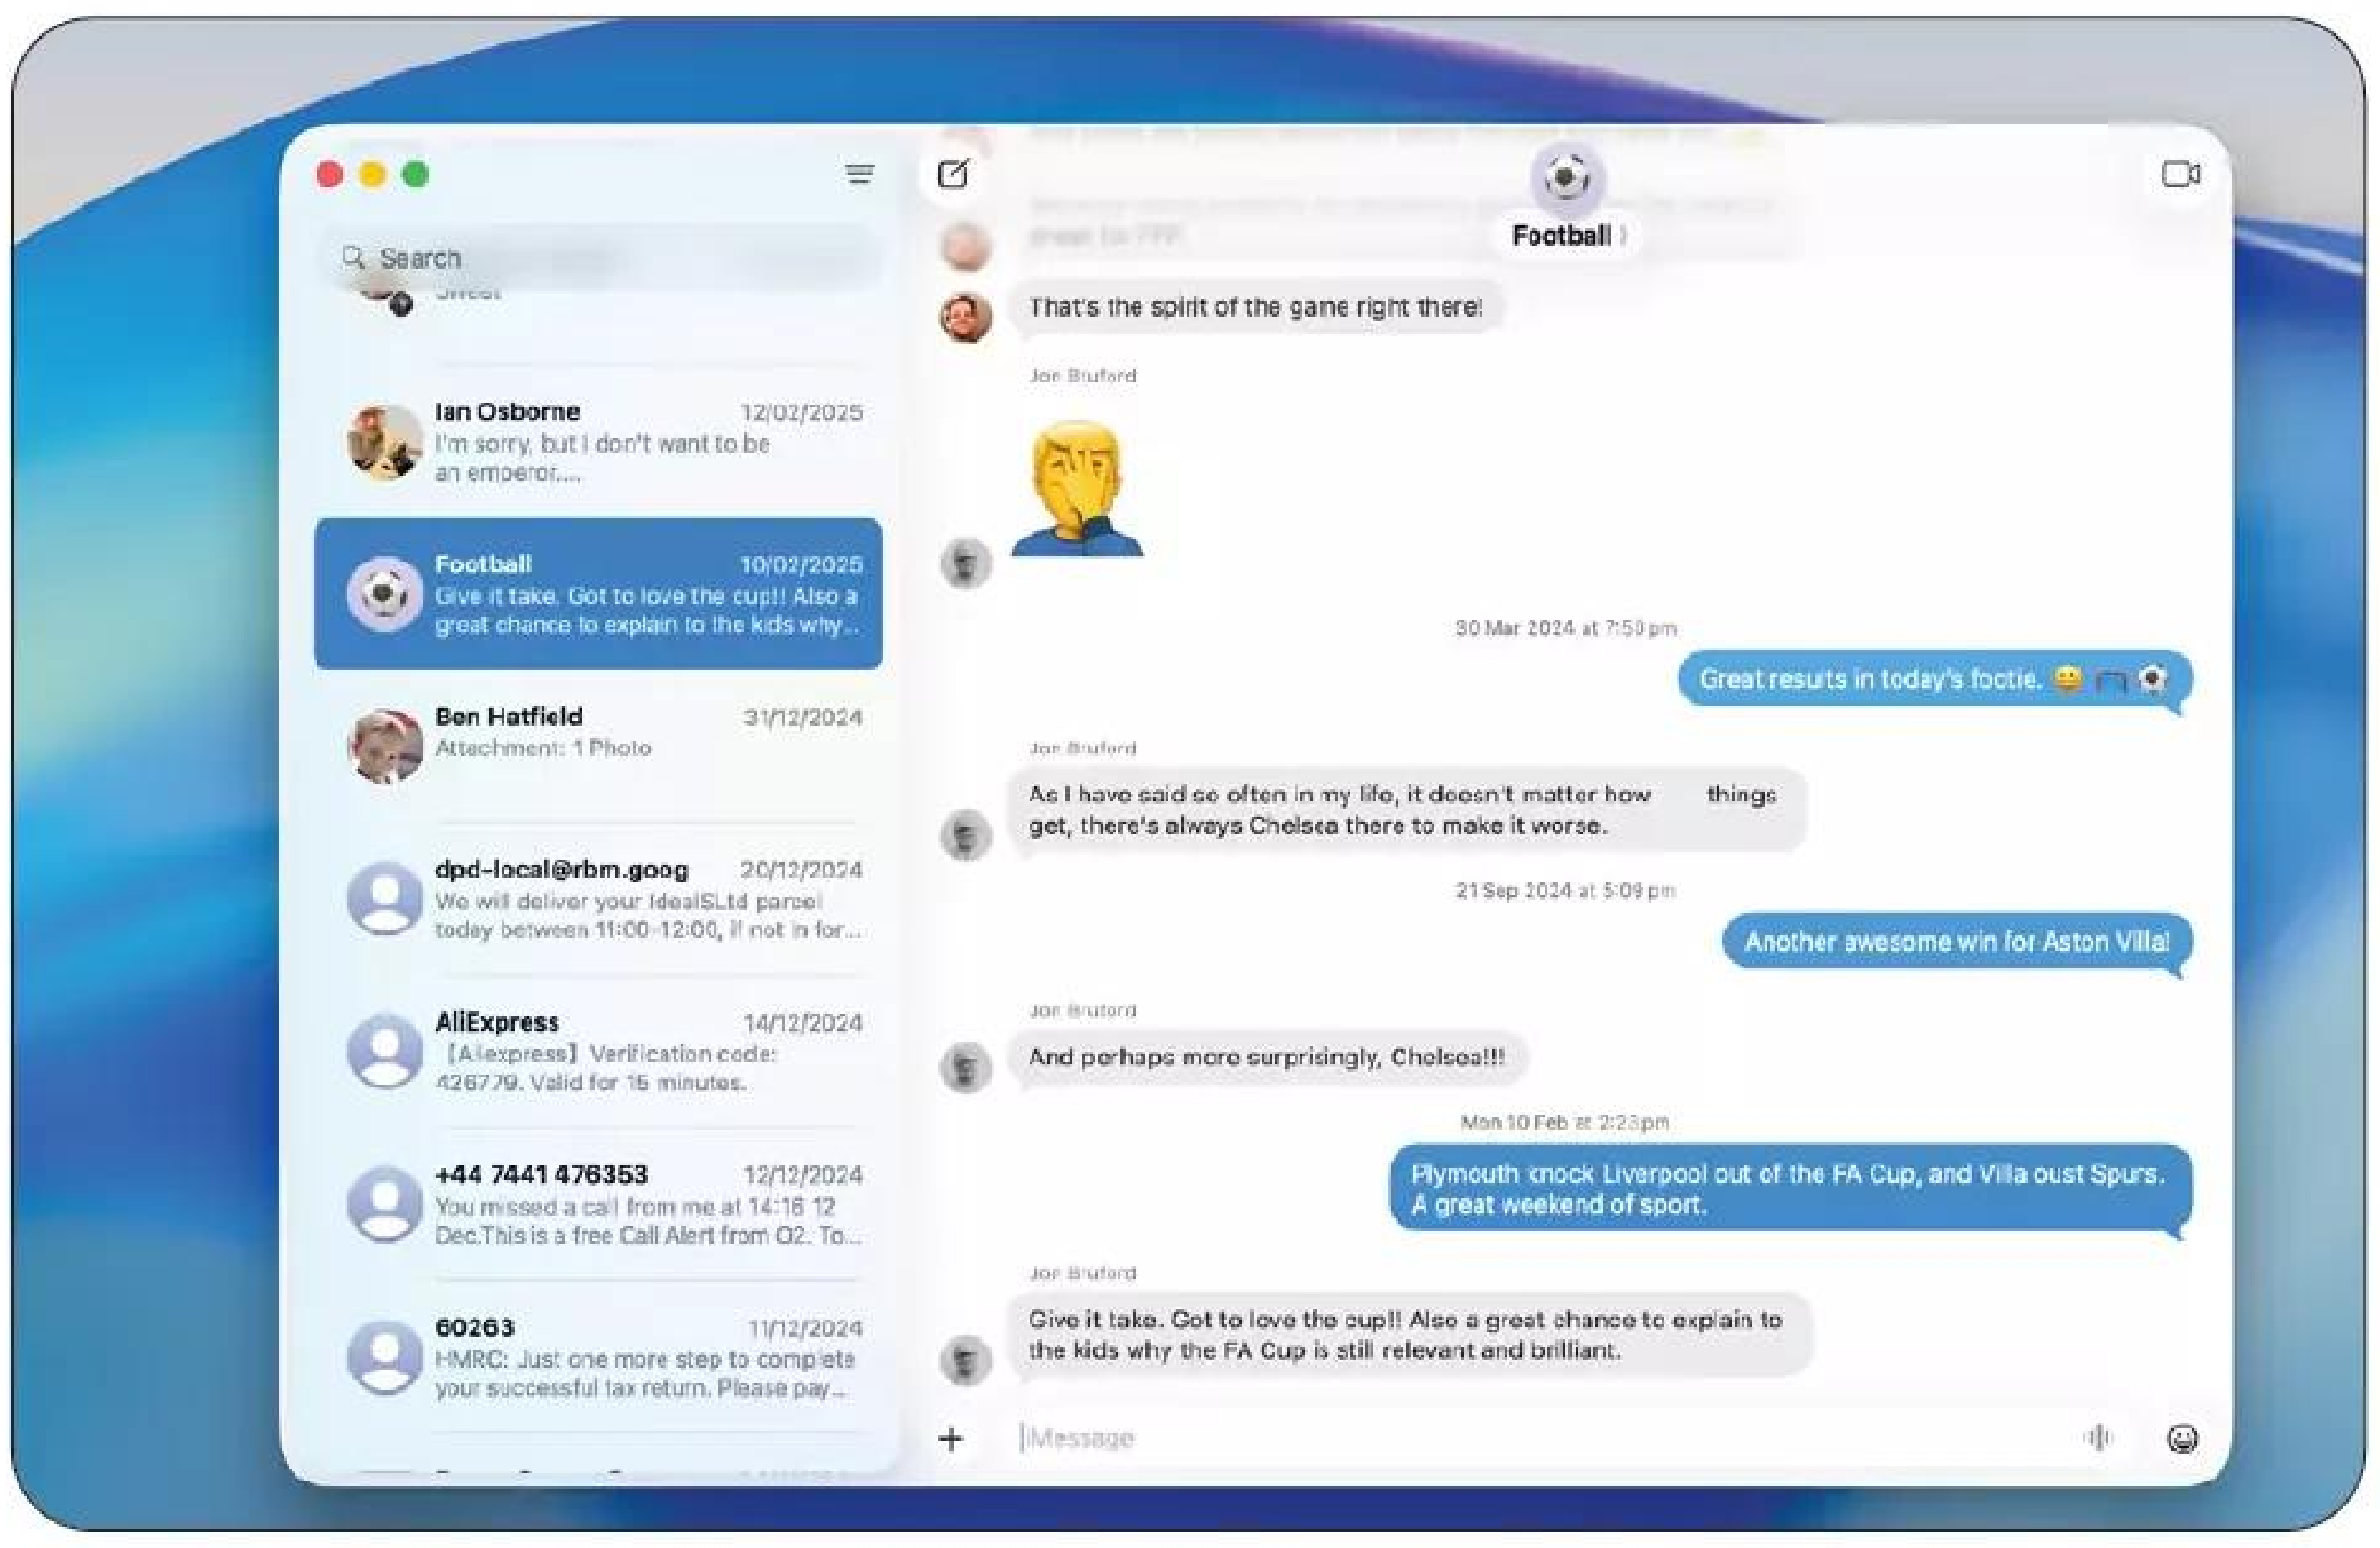
Thanks❤️

5 Paste a web link into a message, and a site preview is shown. Paste a link to a video and it can be played within Messages or clicked on to go to the site. You can drag photos onto the conversation and send them as an attachment too. Click on the icon above the pics to see their thumbnails.



That's the spirit of the game right there!

Jon Bruford

30 Mar 2024 at 7:50 pm

Great results in today's footie.

Jon Bruford

As I have said so often in my life, it doesn't matter how things get, there's always Chelsea there to make it worse.

21 Sep 2024 at 5:09 pm

Another awesome win for Aston Villa!

Jon Bruford

And perhaps more surprisingly, Chelsea!!!

Mon 10 Feb at 2:23pm

Plymouth knock Liverpool out of the FA Cup, and Villa oust Spurs. A great weekend of sport.

Jon Bruford

Give it take. Got to love the cup!! Also a great chance to explain to the kids why the FA Cup is still relevant and brilliant.

6 Type more than one person's details into the To field and you can start a group conversation. Your outgoing messages are sent to everyone in the group, and their replies in grey show the picture and the name of the person who sent it; so you can see who said what.

Pinned Conversations

You can pin up to nine conversations, so they're always at the top of the list. To pin a conversation, right-click on it and select 'Pin' from the menu; it appears as a circle atop the list. To unpin, right-click it again and select 'Unpin'. Incoming messages from pinned chats are shown on the pin.

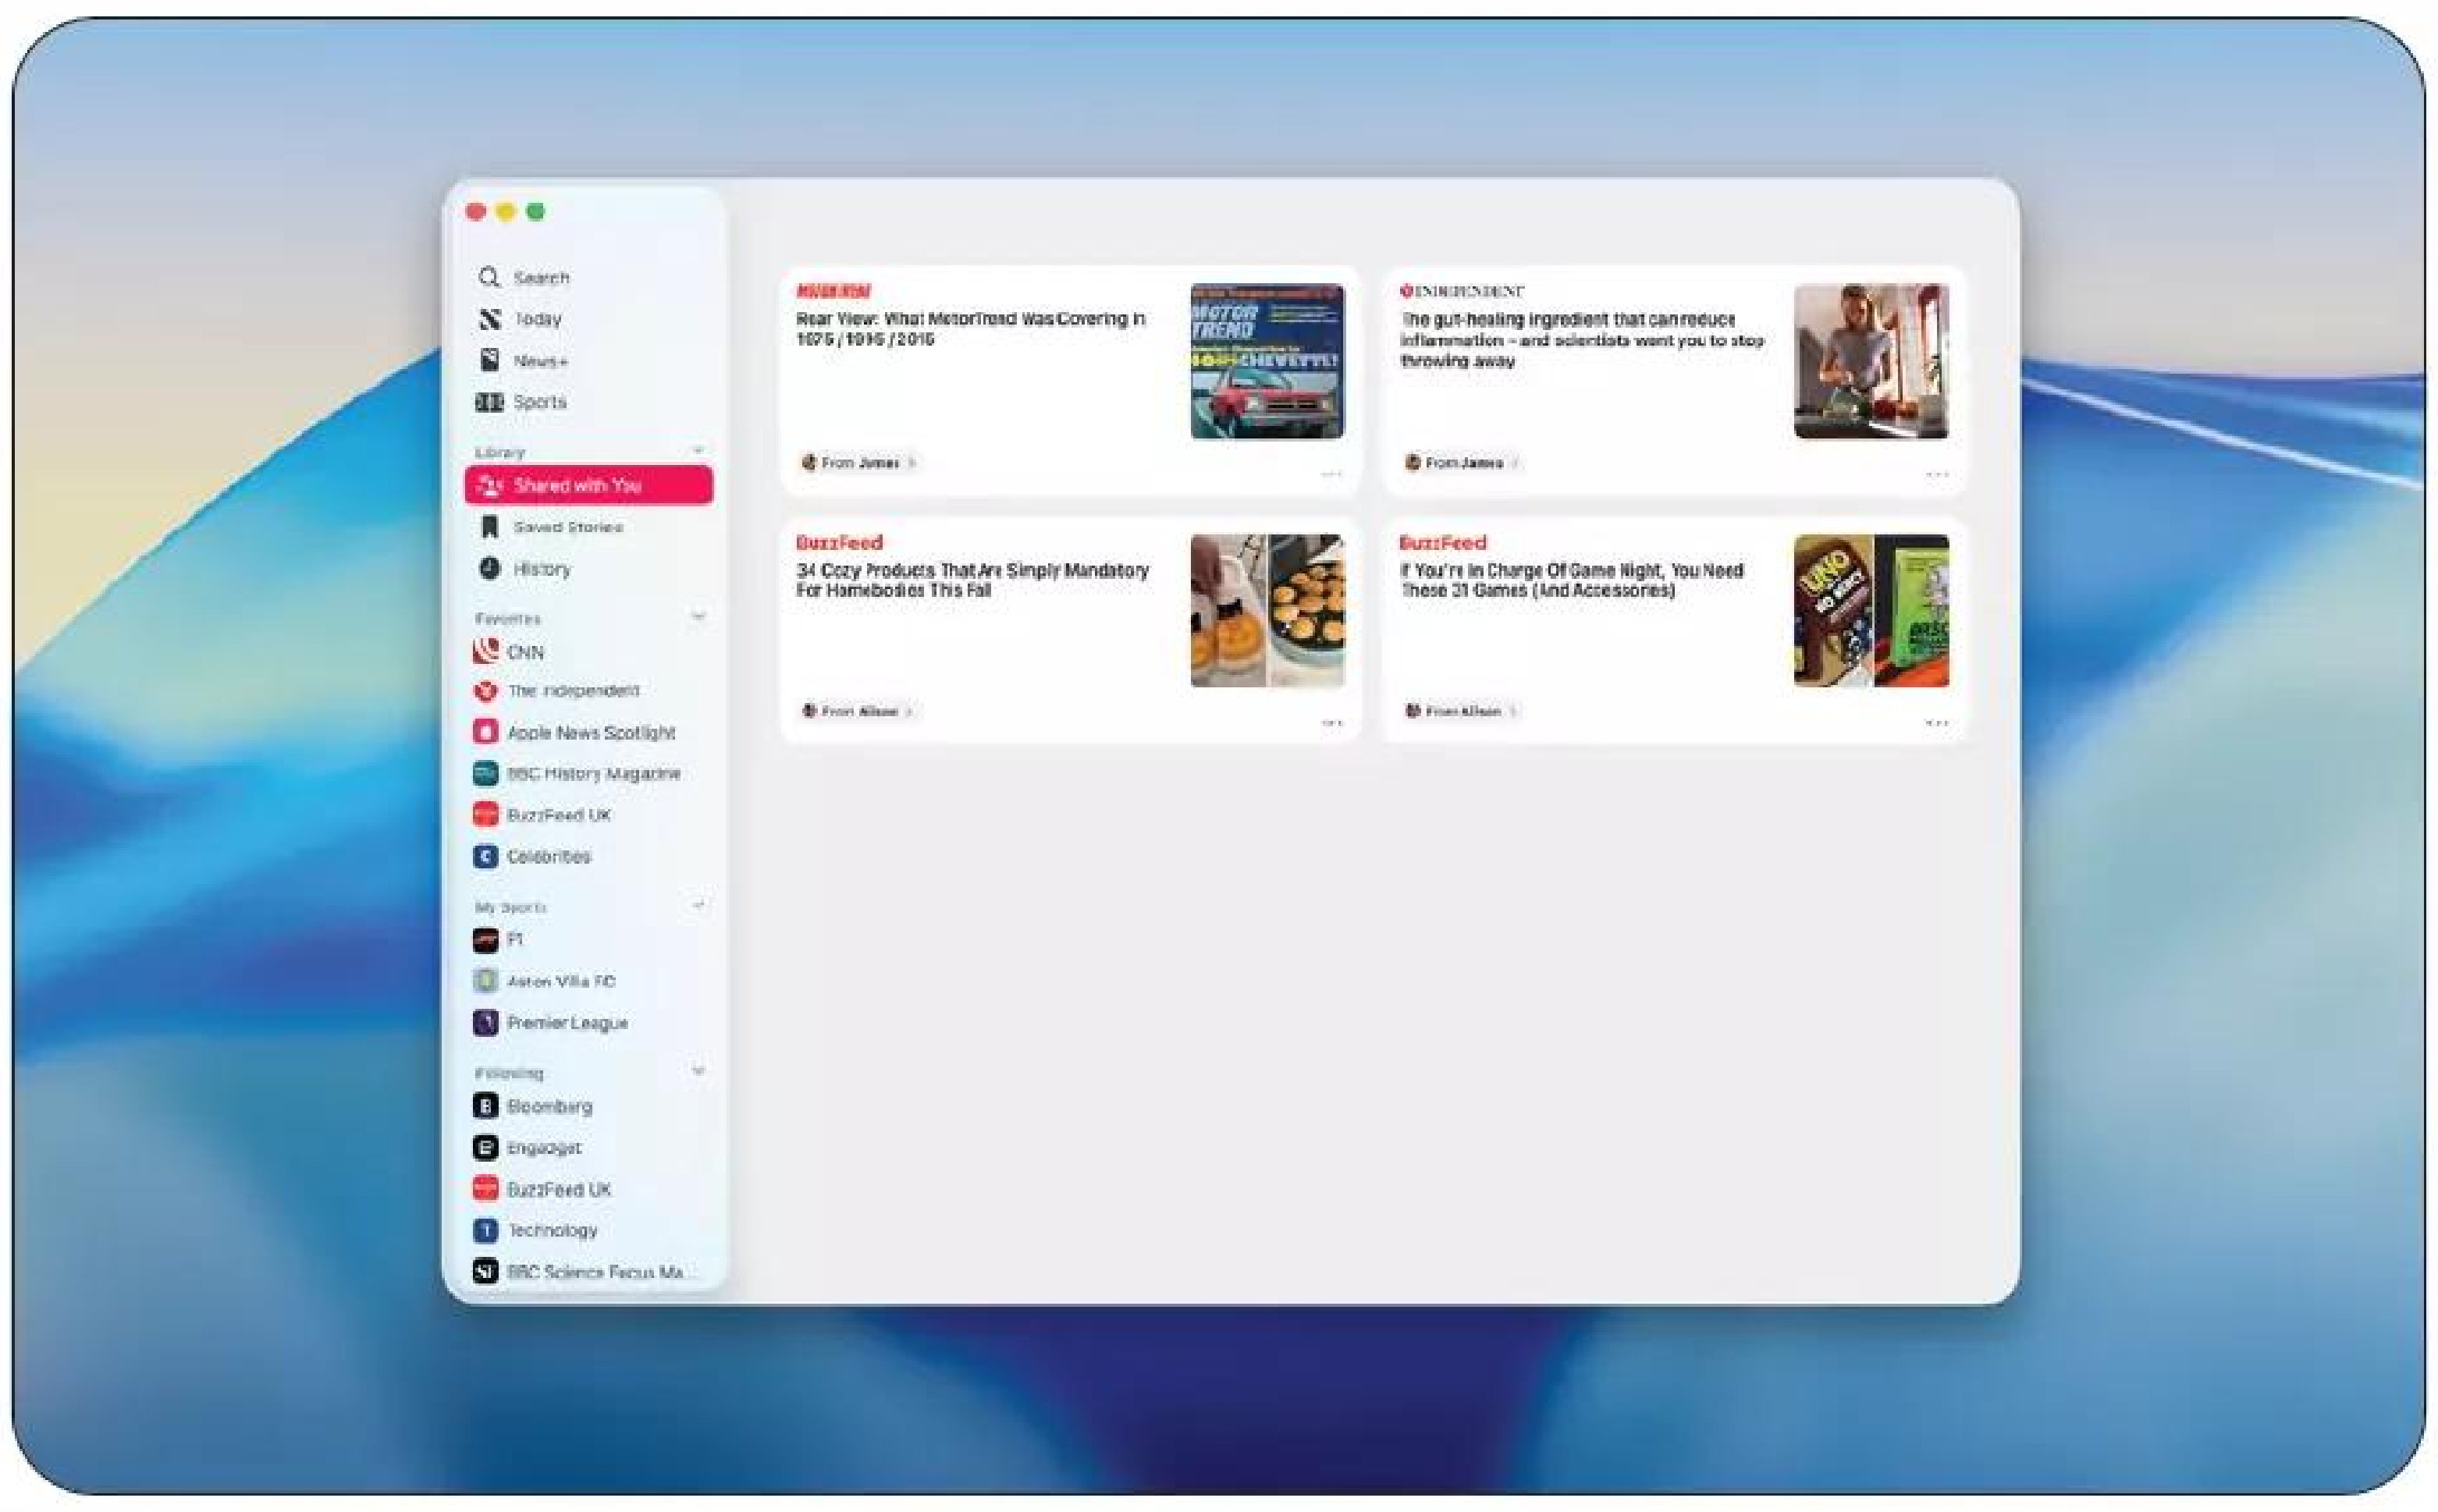
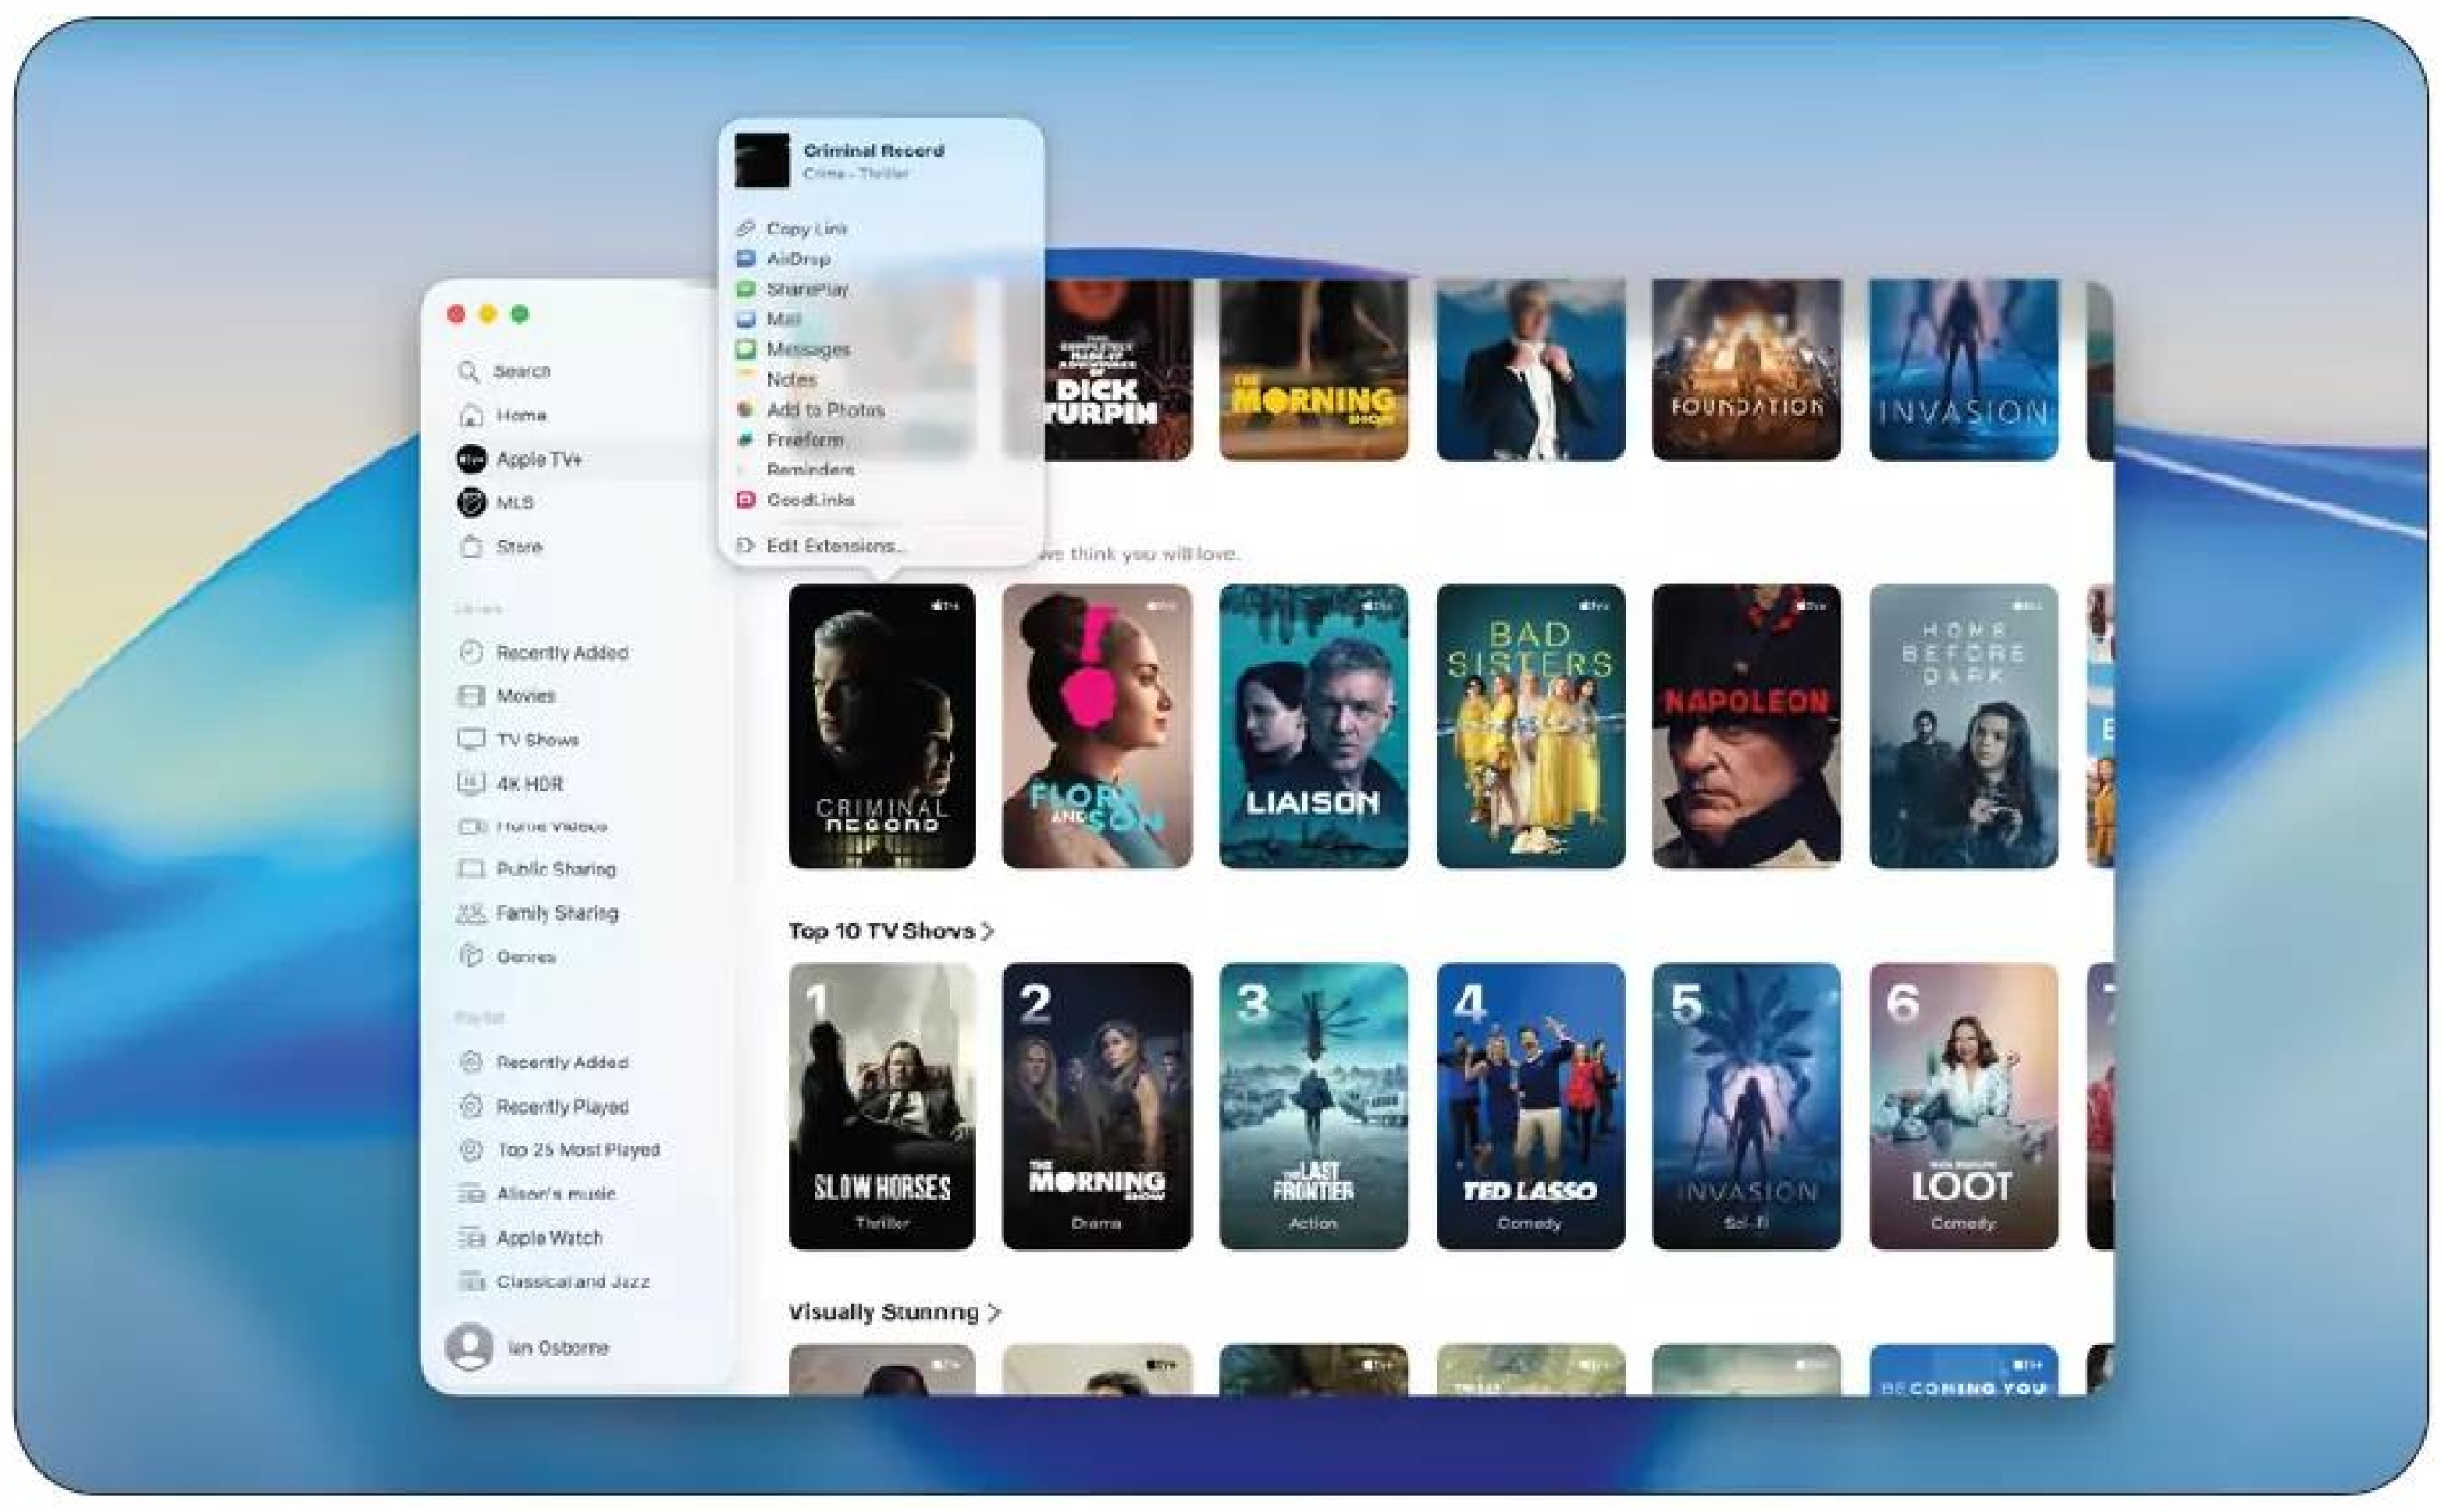
Sharing & SharePlay



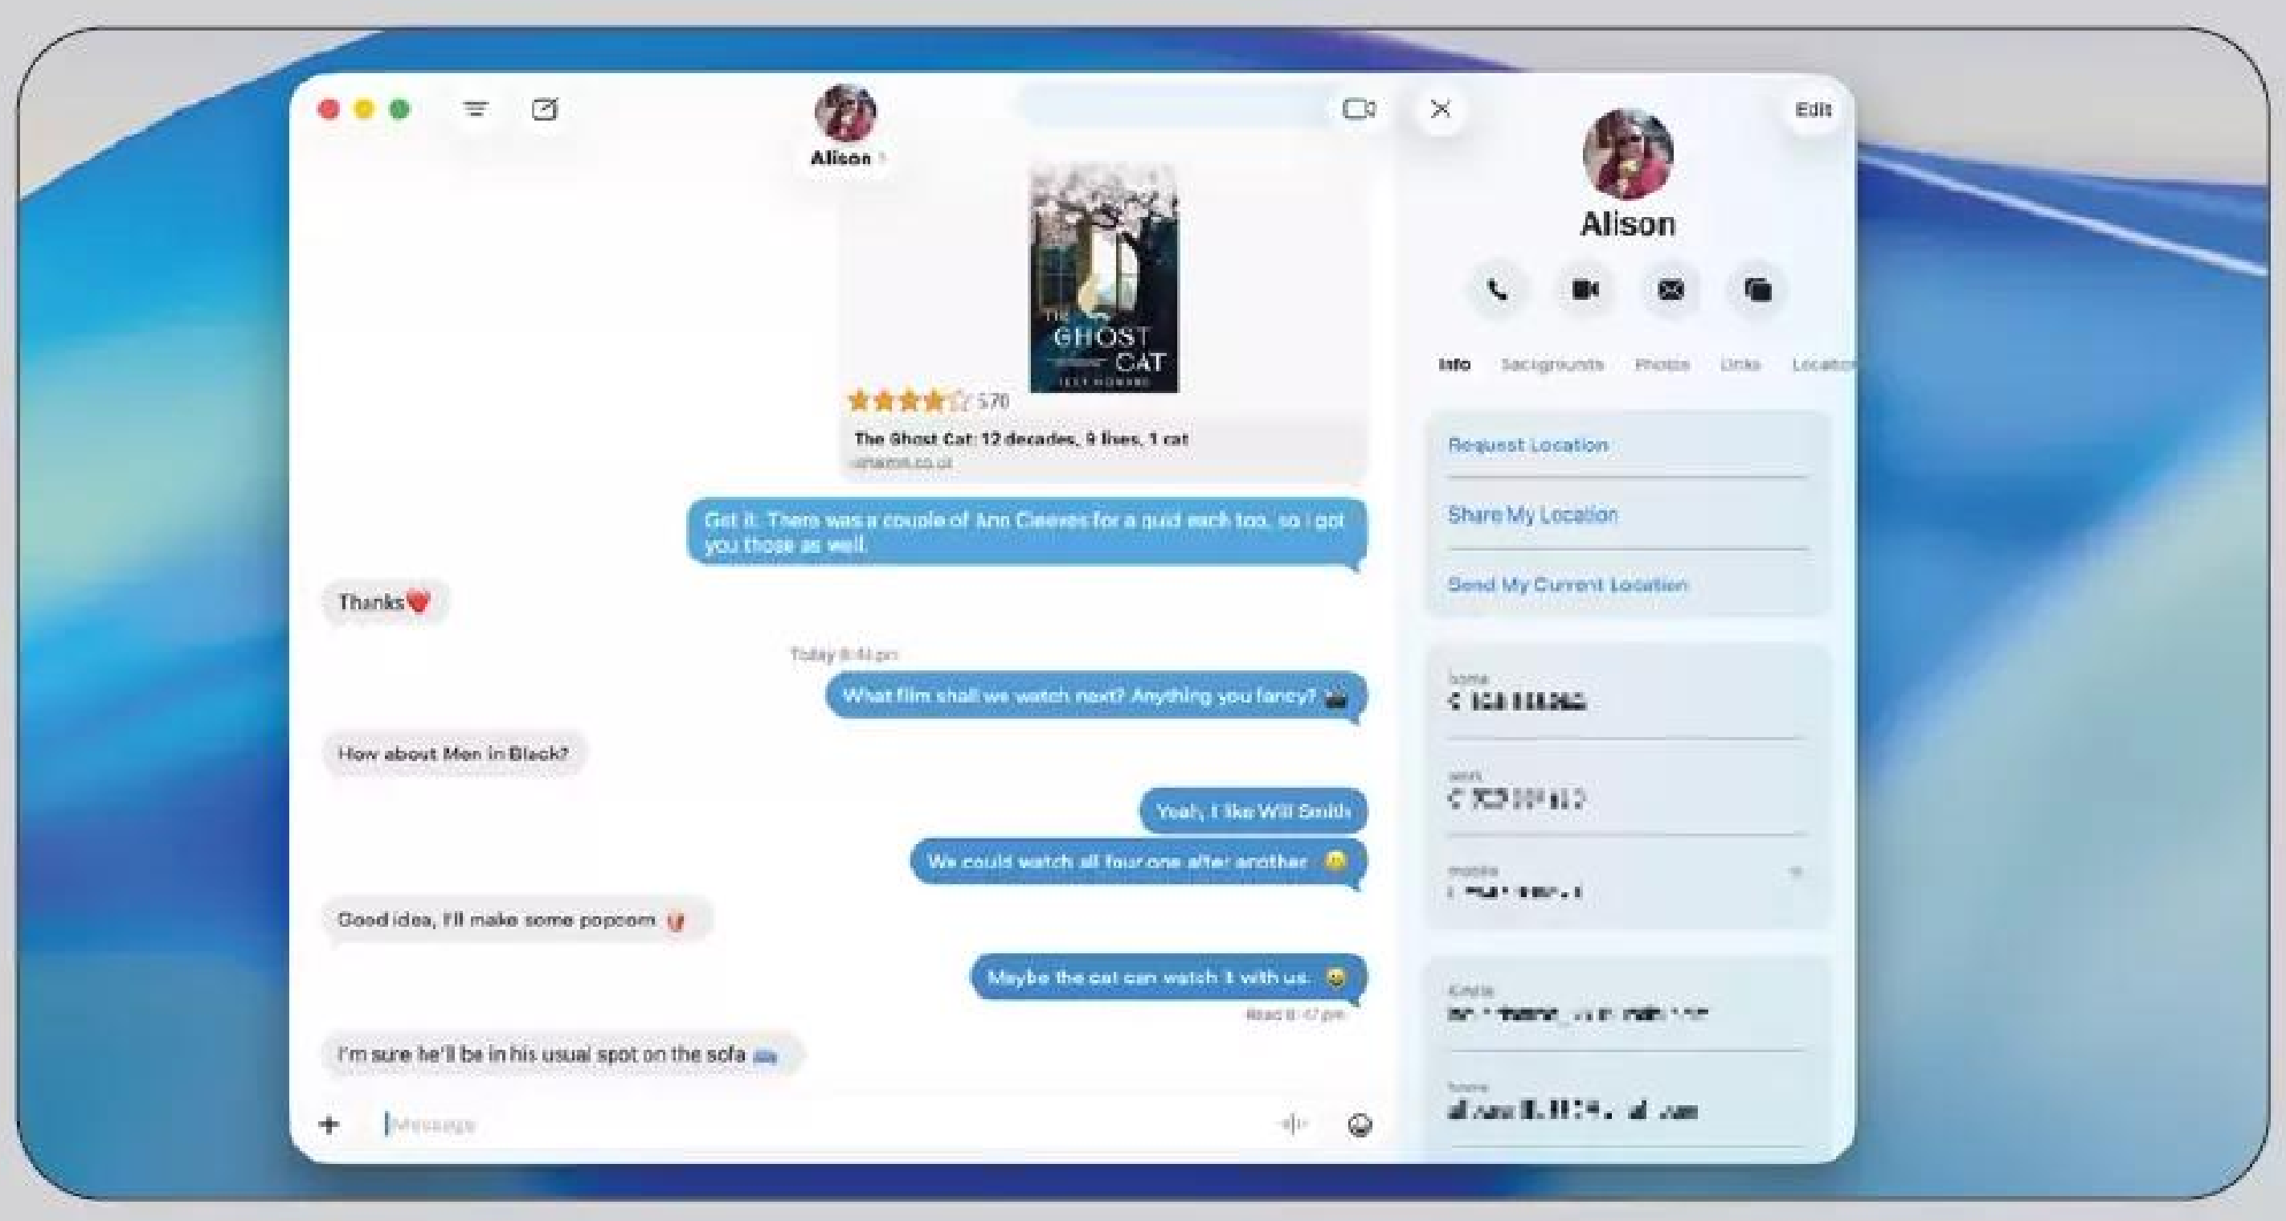
1 Photos, Podcasts, web links, Apple News and Apple TV shared with you in the Messages app are also shown in their respective apps. In News, Safari, Podcasts and Photos, there's a Shared with You option in the sidebar. In the Apple TV app, it's under the Watch Now tab.



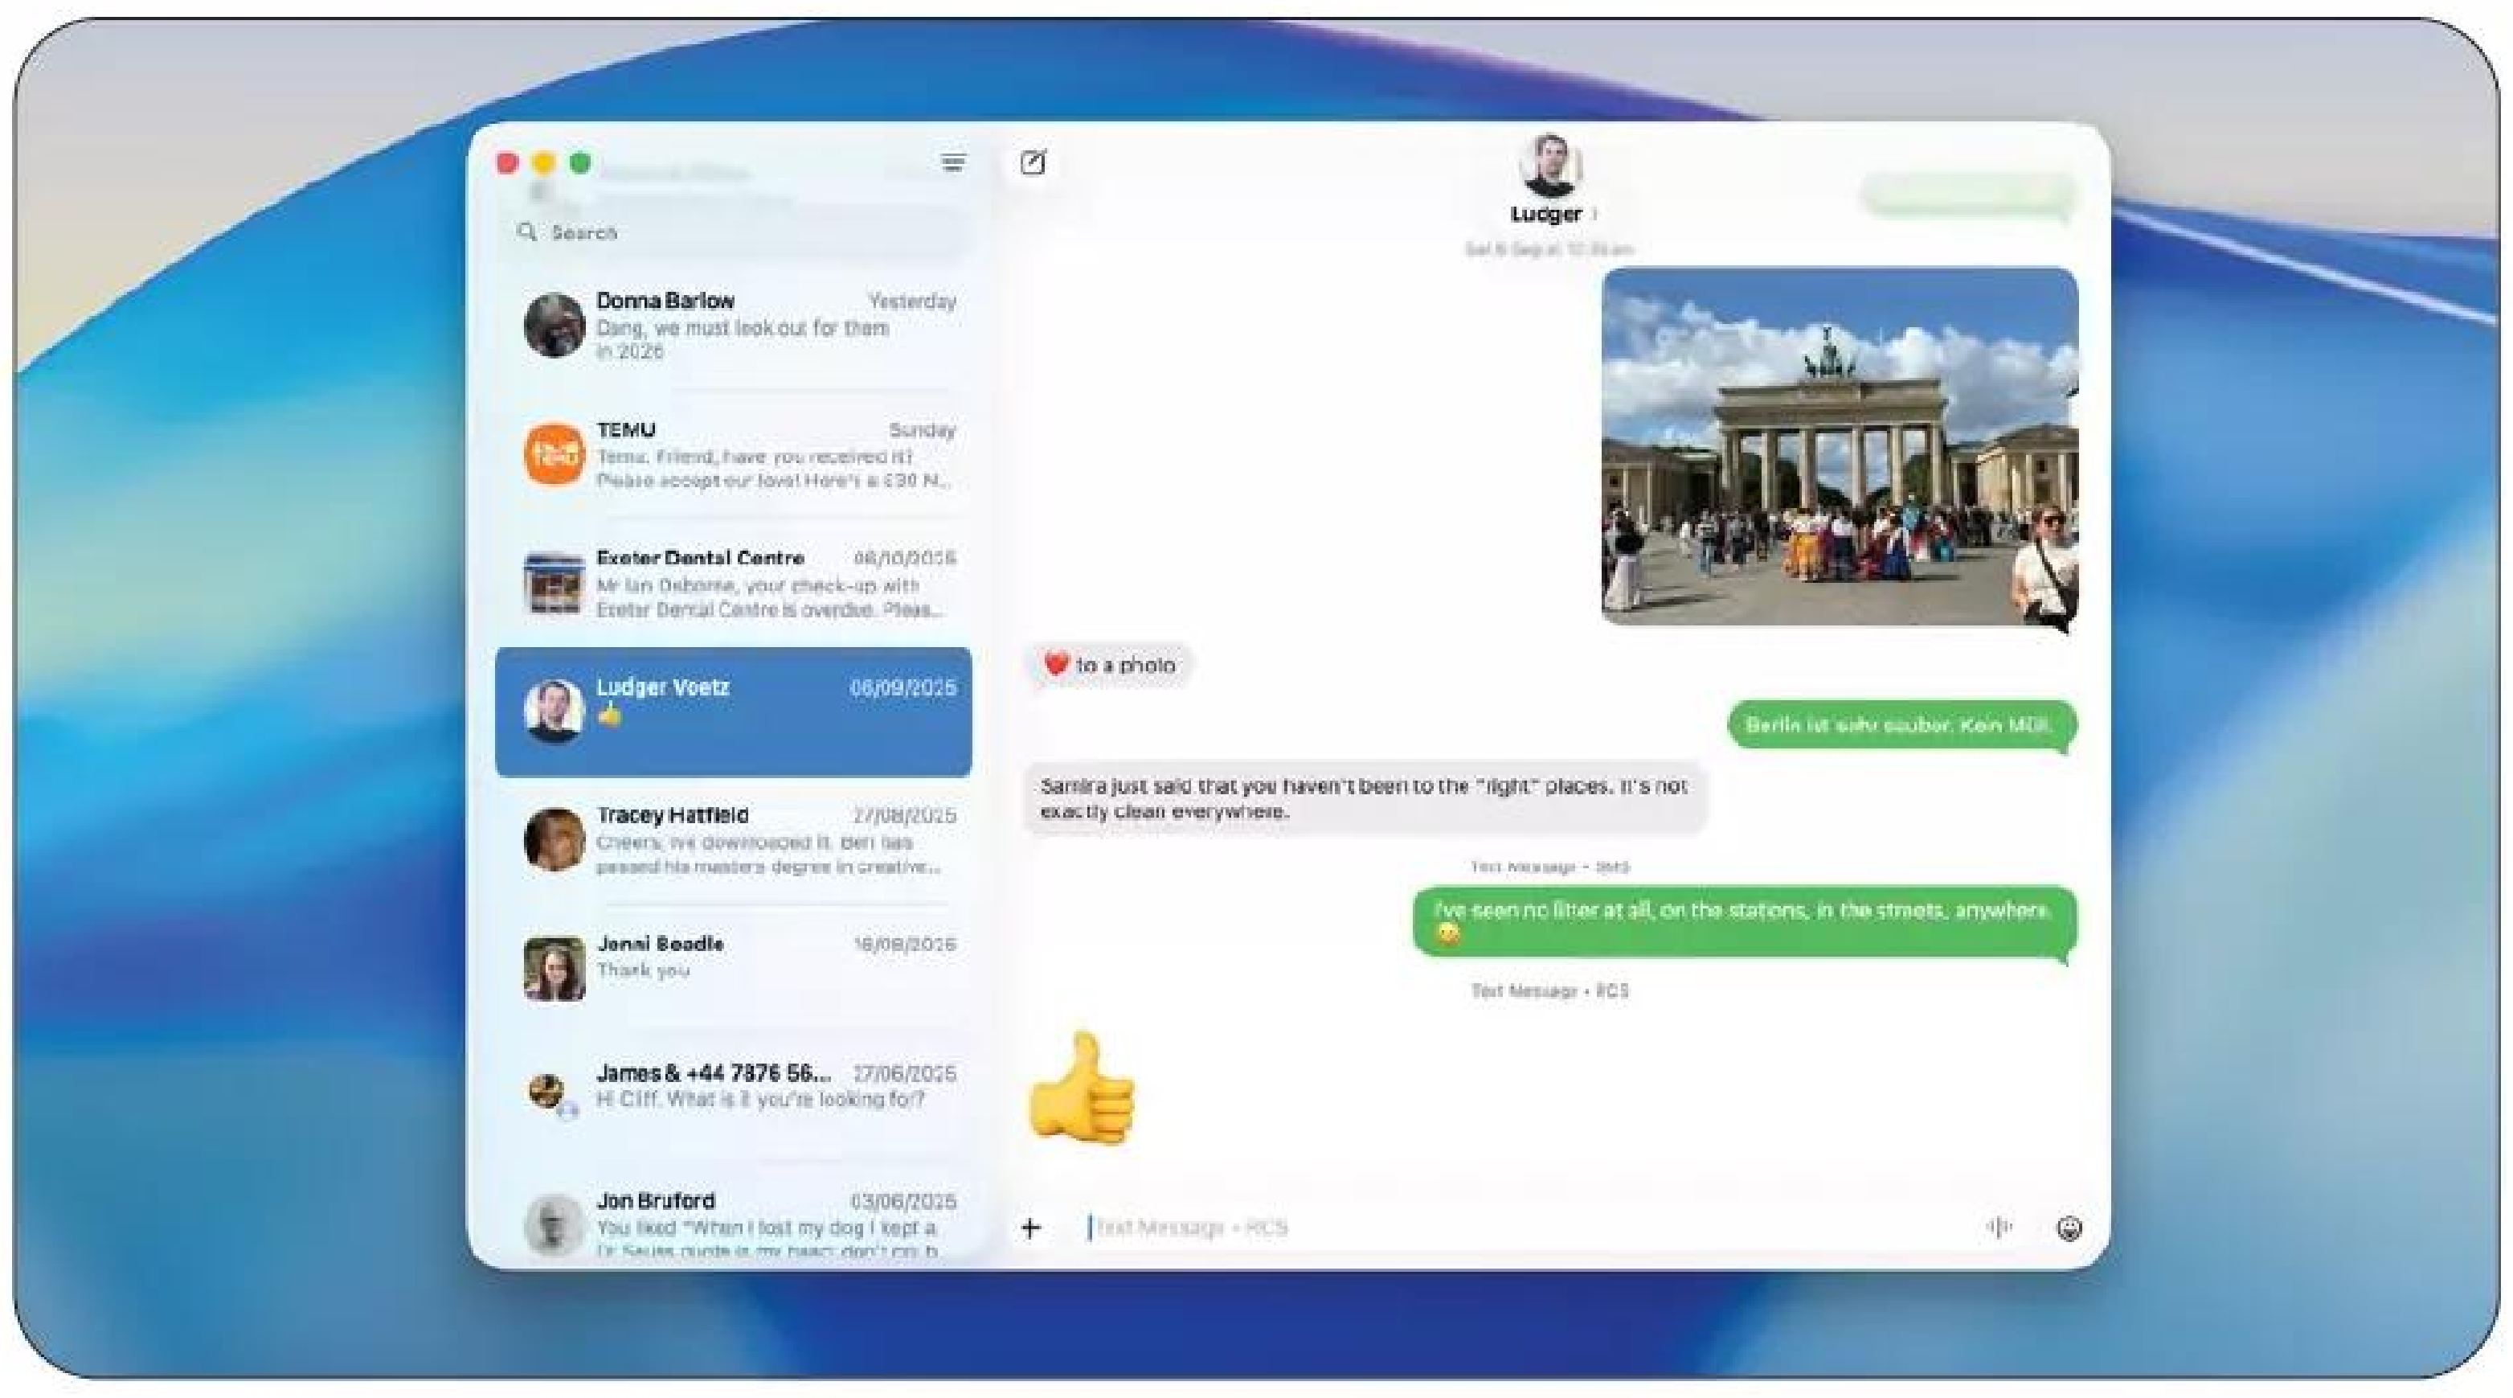
2 If you want to share activities such as movies, music, workouts, games and more, so you're enjoying them at the same time as your friends, share them in Messages as well as FaceTime. Third party apps such as TikTok, NBA and Twitch are SharePlay compatible too.

The Details Window

In a conversation, click the 'i' in the top right corner for a details window on that person. This window shows their location (if they're sharing it) and buttons to contact them by phone, video, email and more. Scroll up to see photos, links and other attachments you've shared with each other.

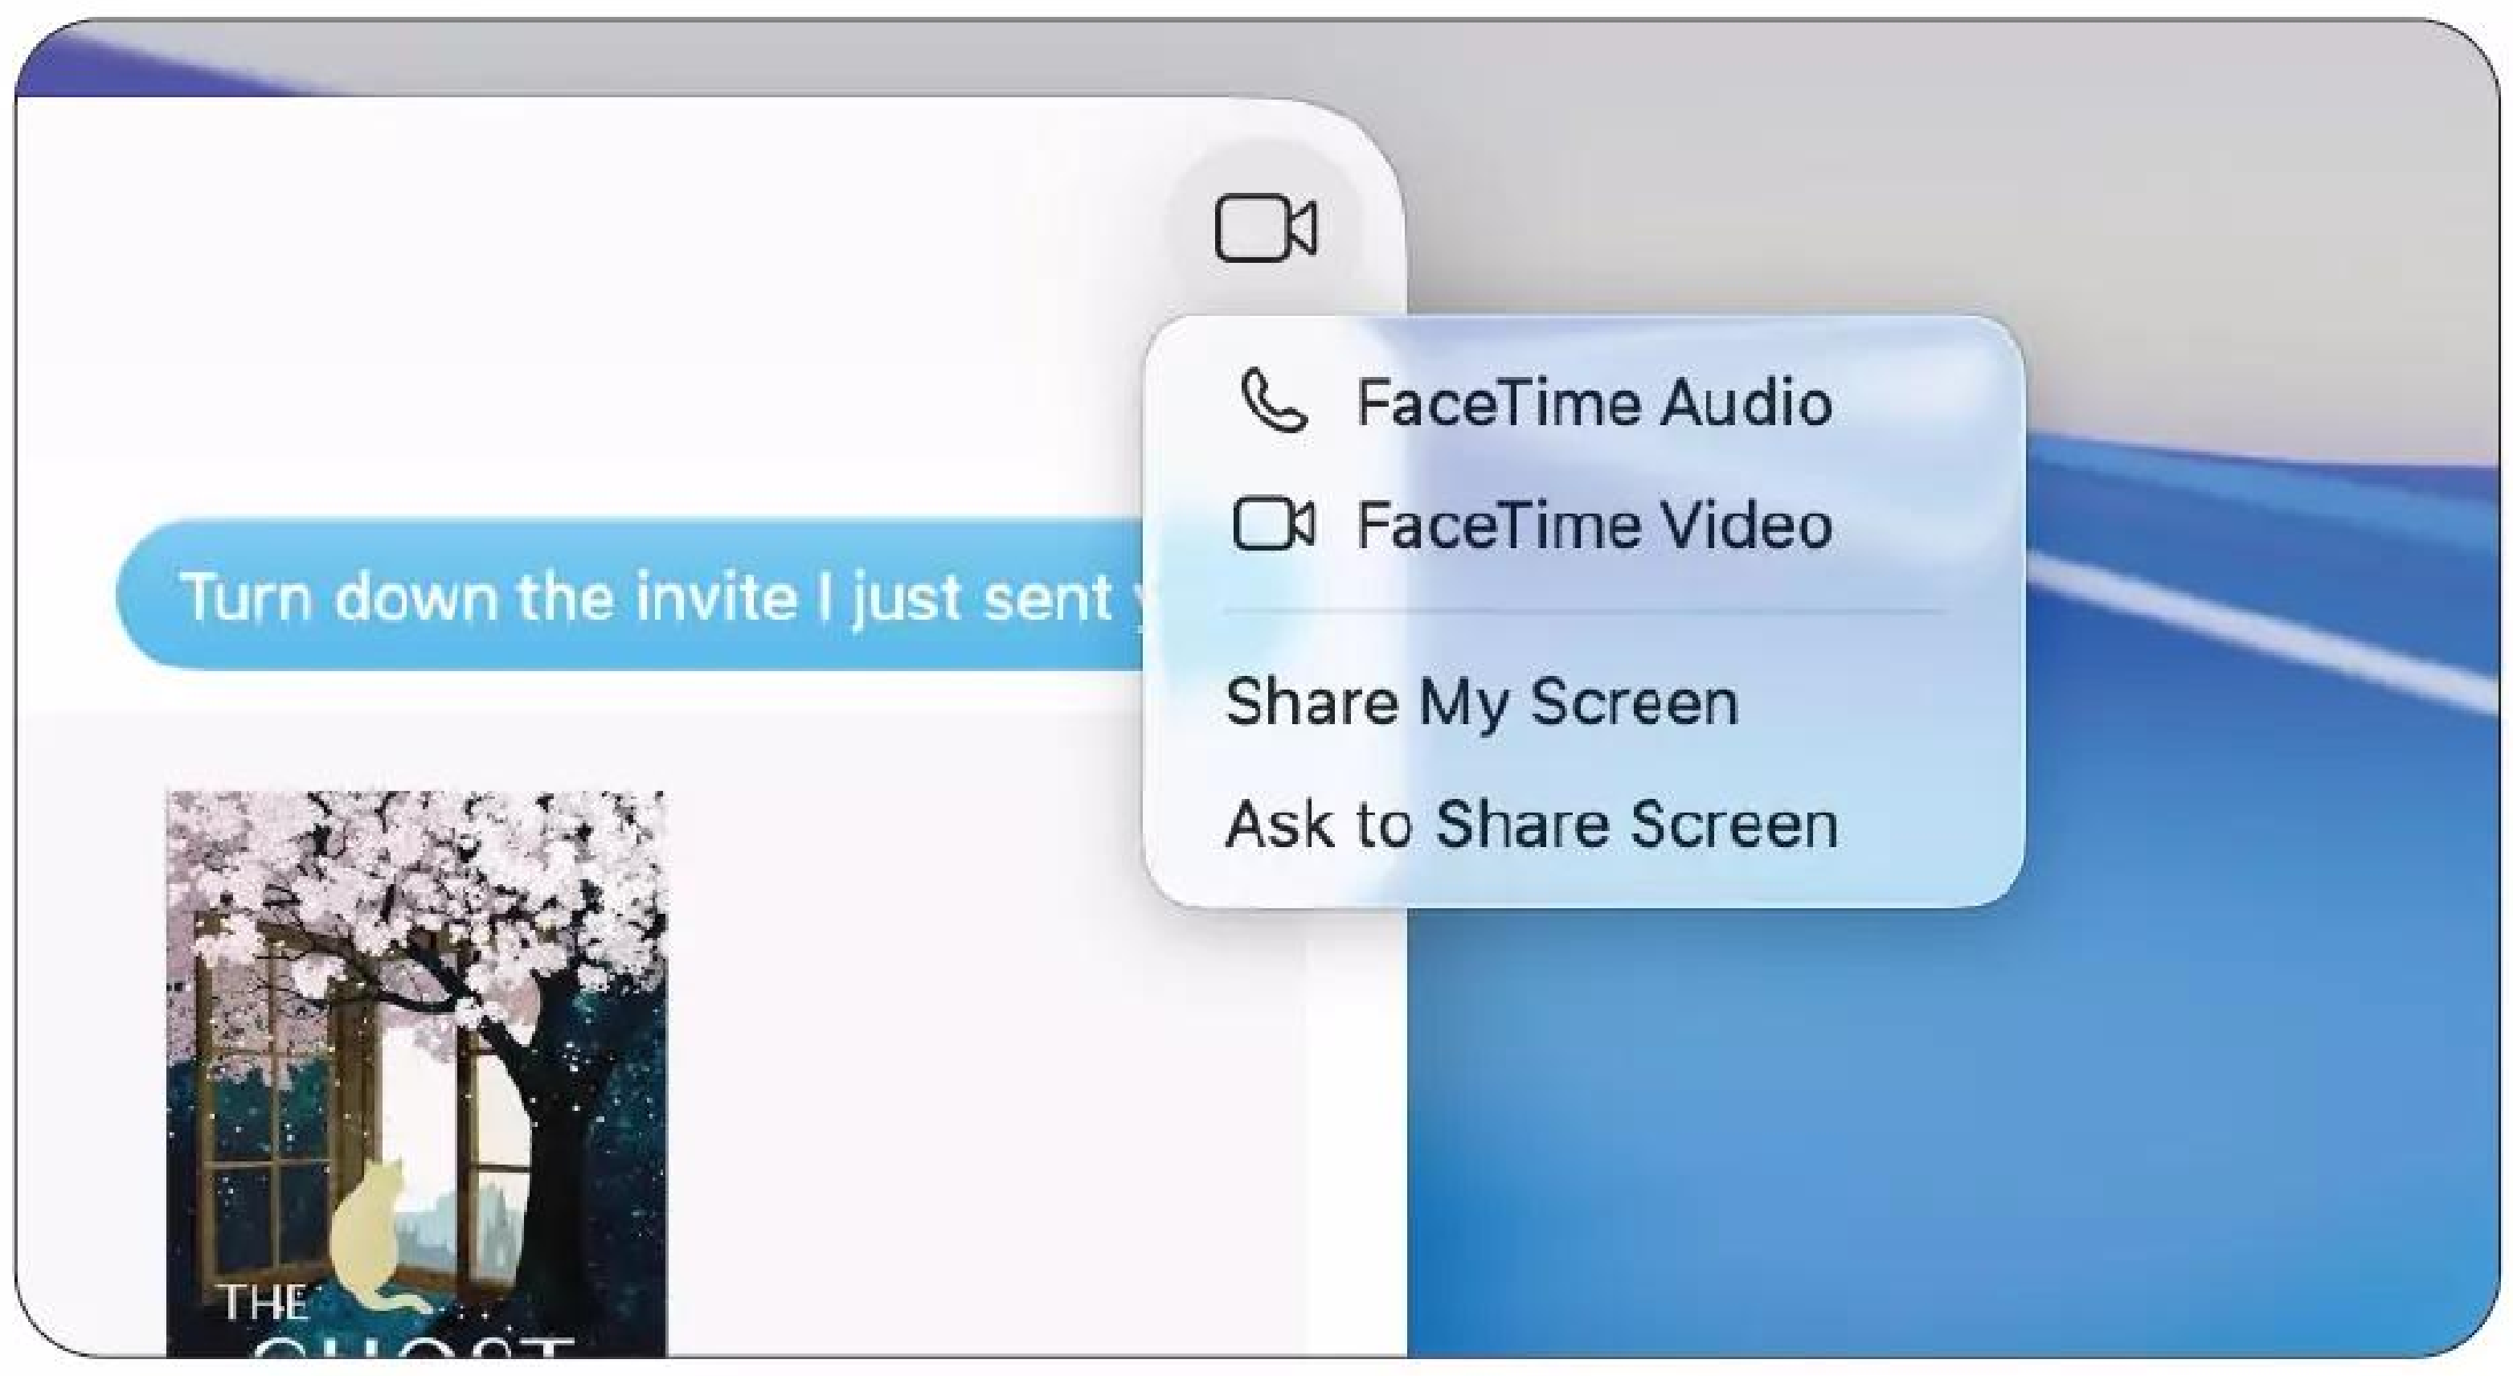


Blue or Green?



Messages sent by you appear as blue or green speech bubbles. If the bubble is blue, your message is being sent to an Apple device. These messages are free, as they're sent over the Internet. If the bubbles are green, they're sent to a non-Apple device and might incur SMS charges.

FaceTime Calls

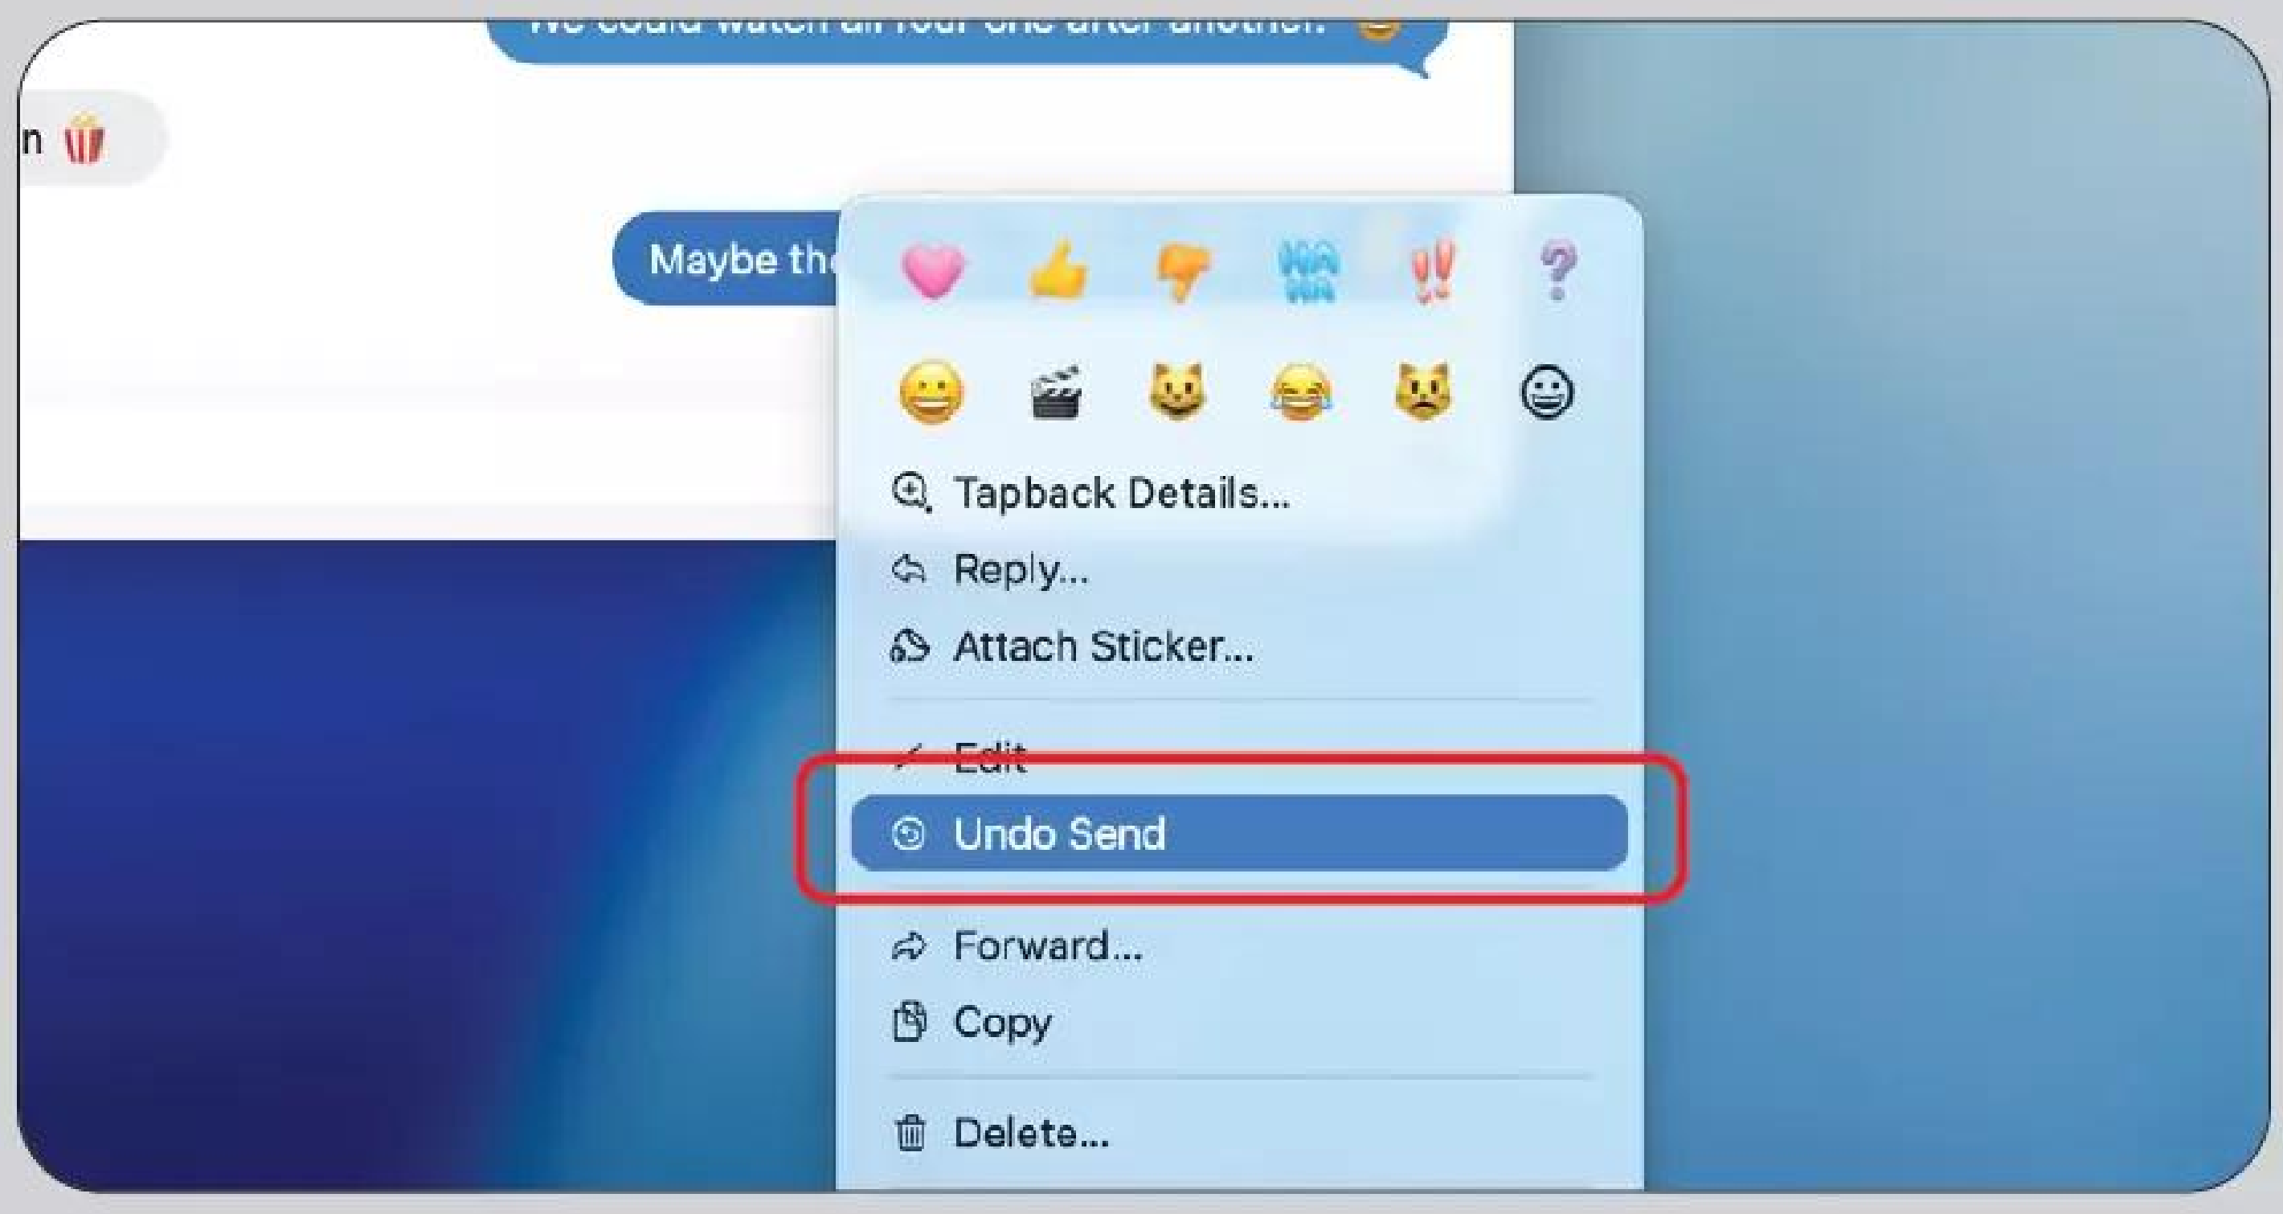


Turn down the invite I just sent

Click the video camera icon in the top-right of the window to initiate a FaceTime call to the person you're messaging with. The pop-up window that appears lets you make a FaceTime video or audio call. This icon only appears when the person you're messaging with also has an Apple device.

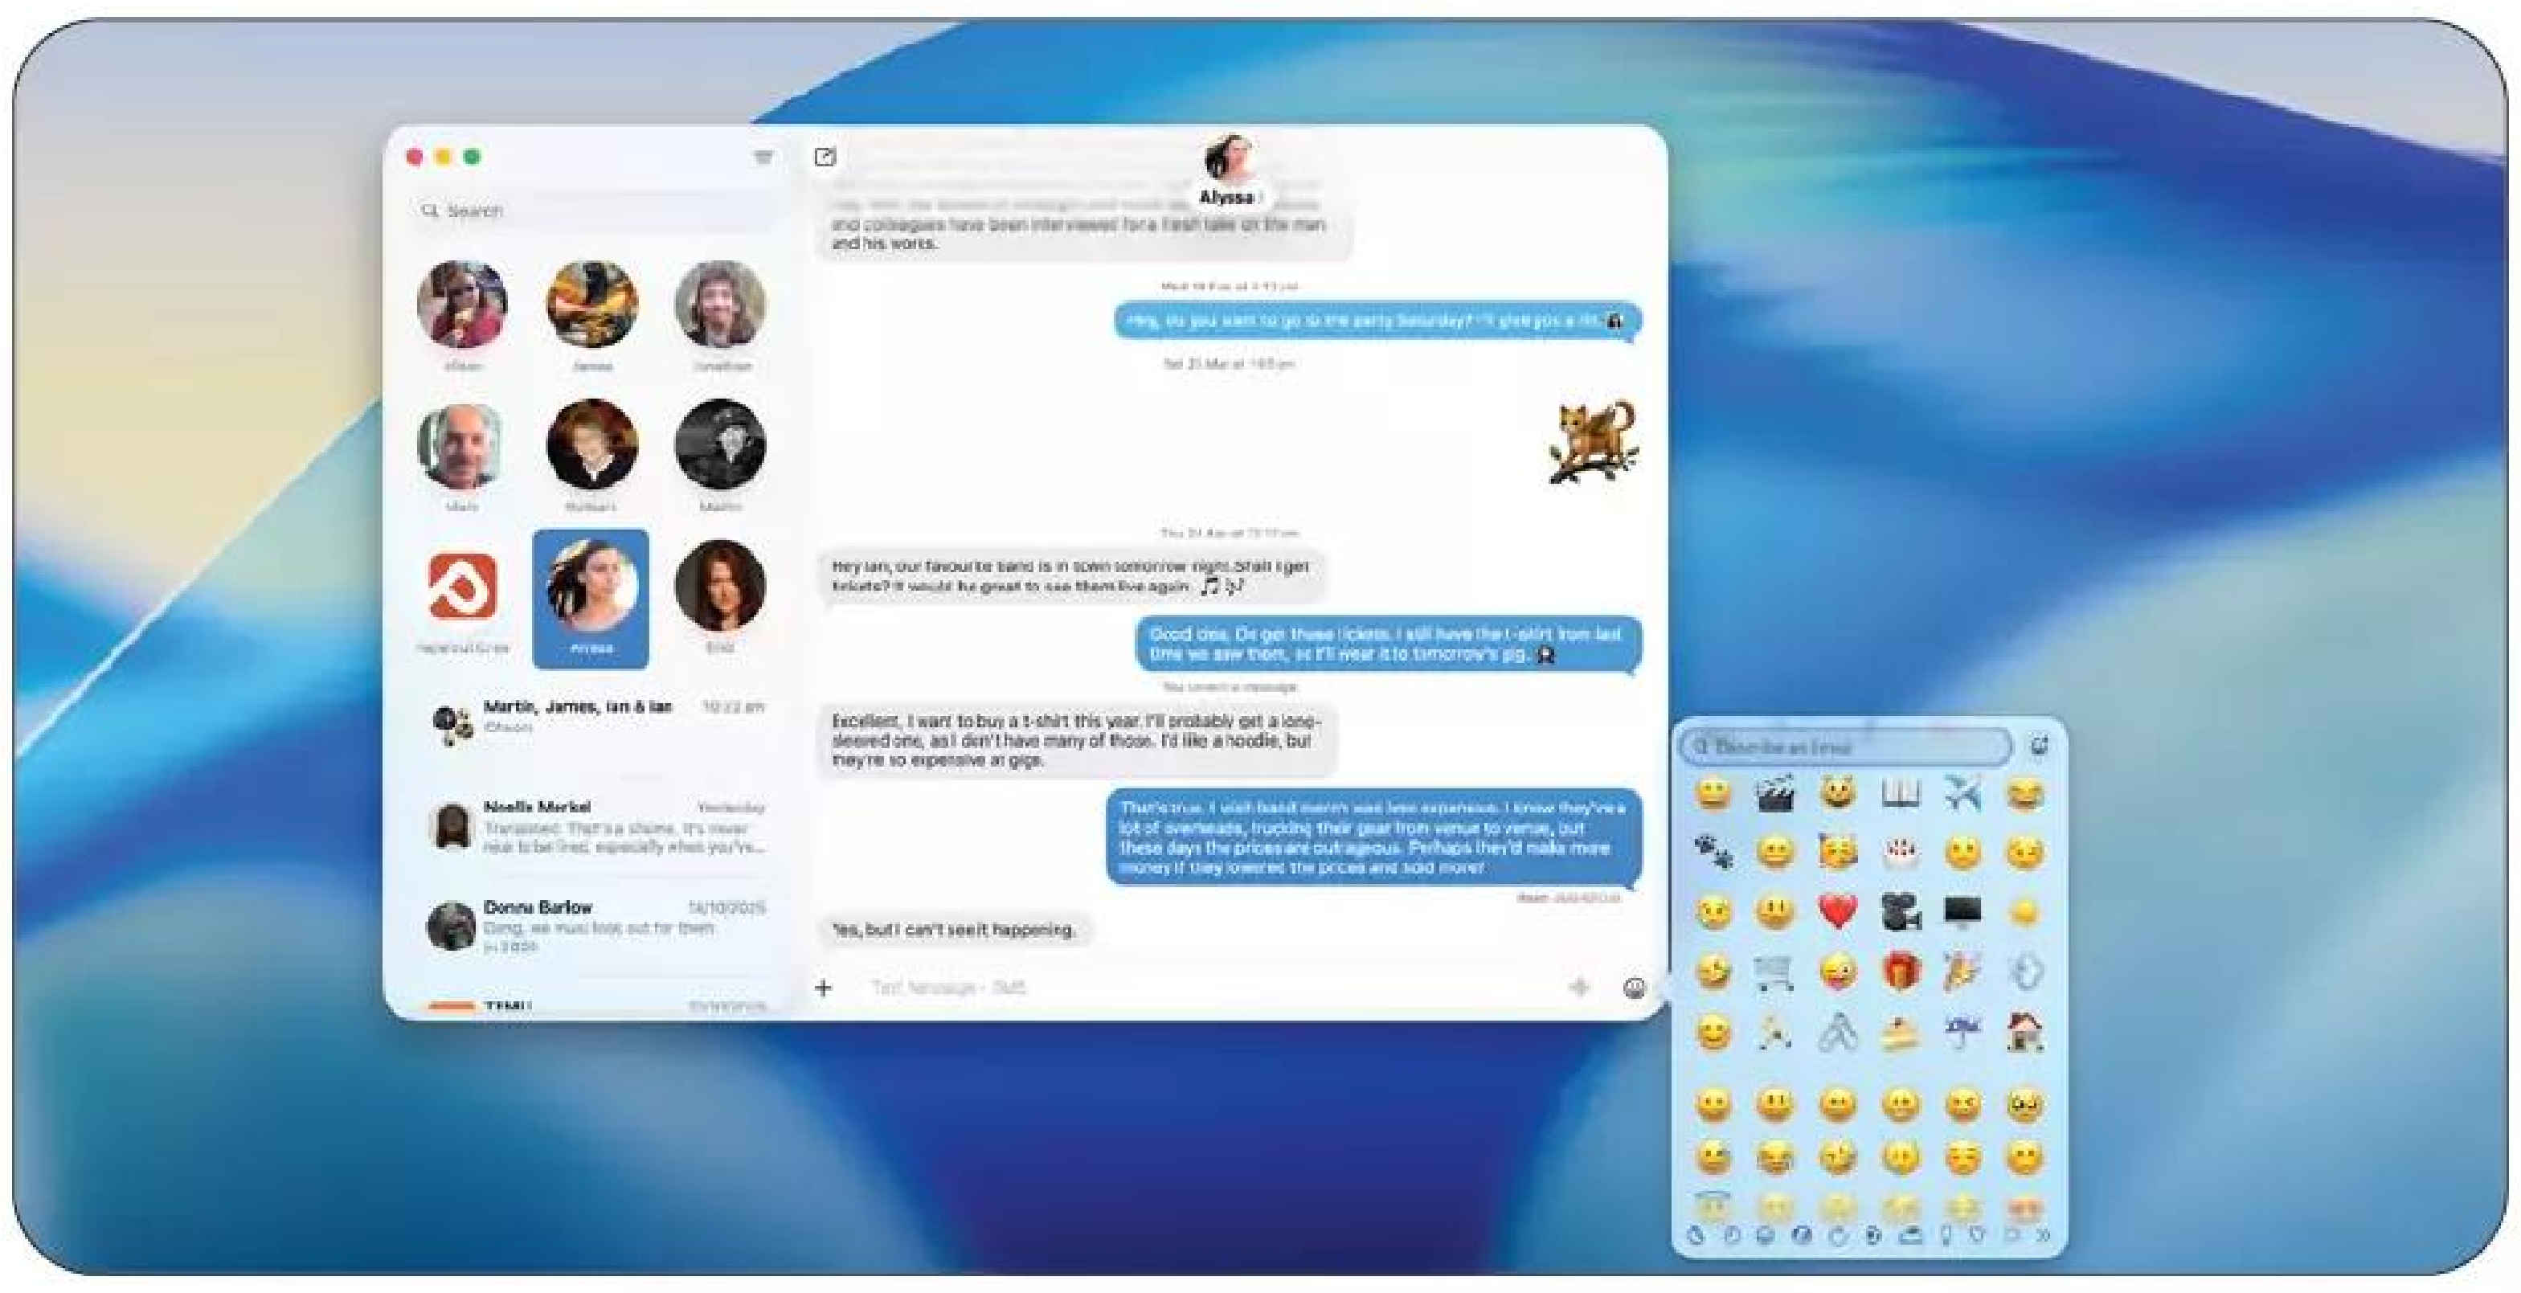
Undo Send

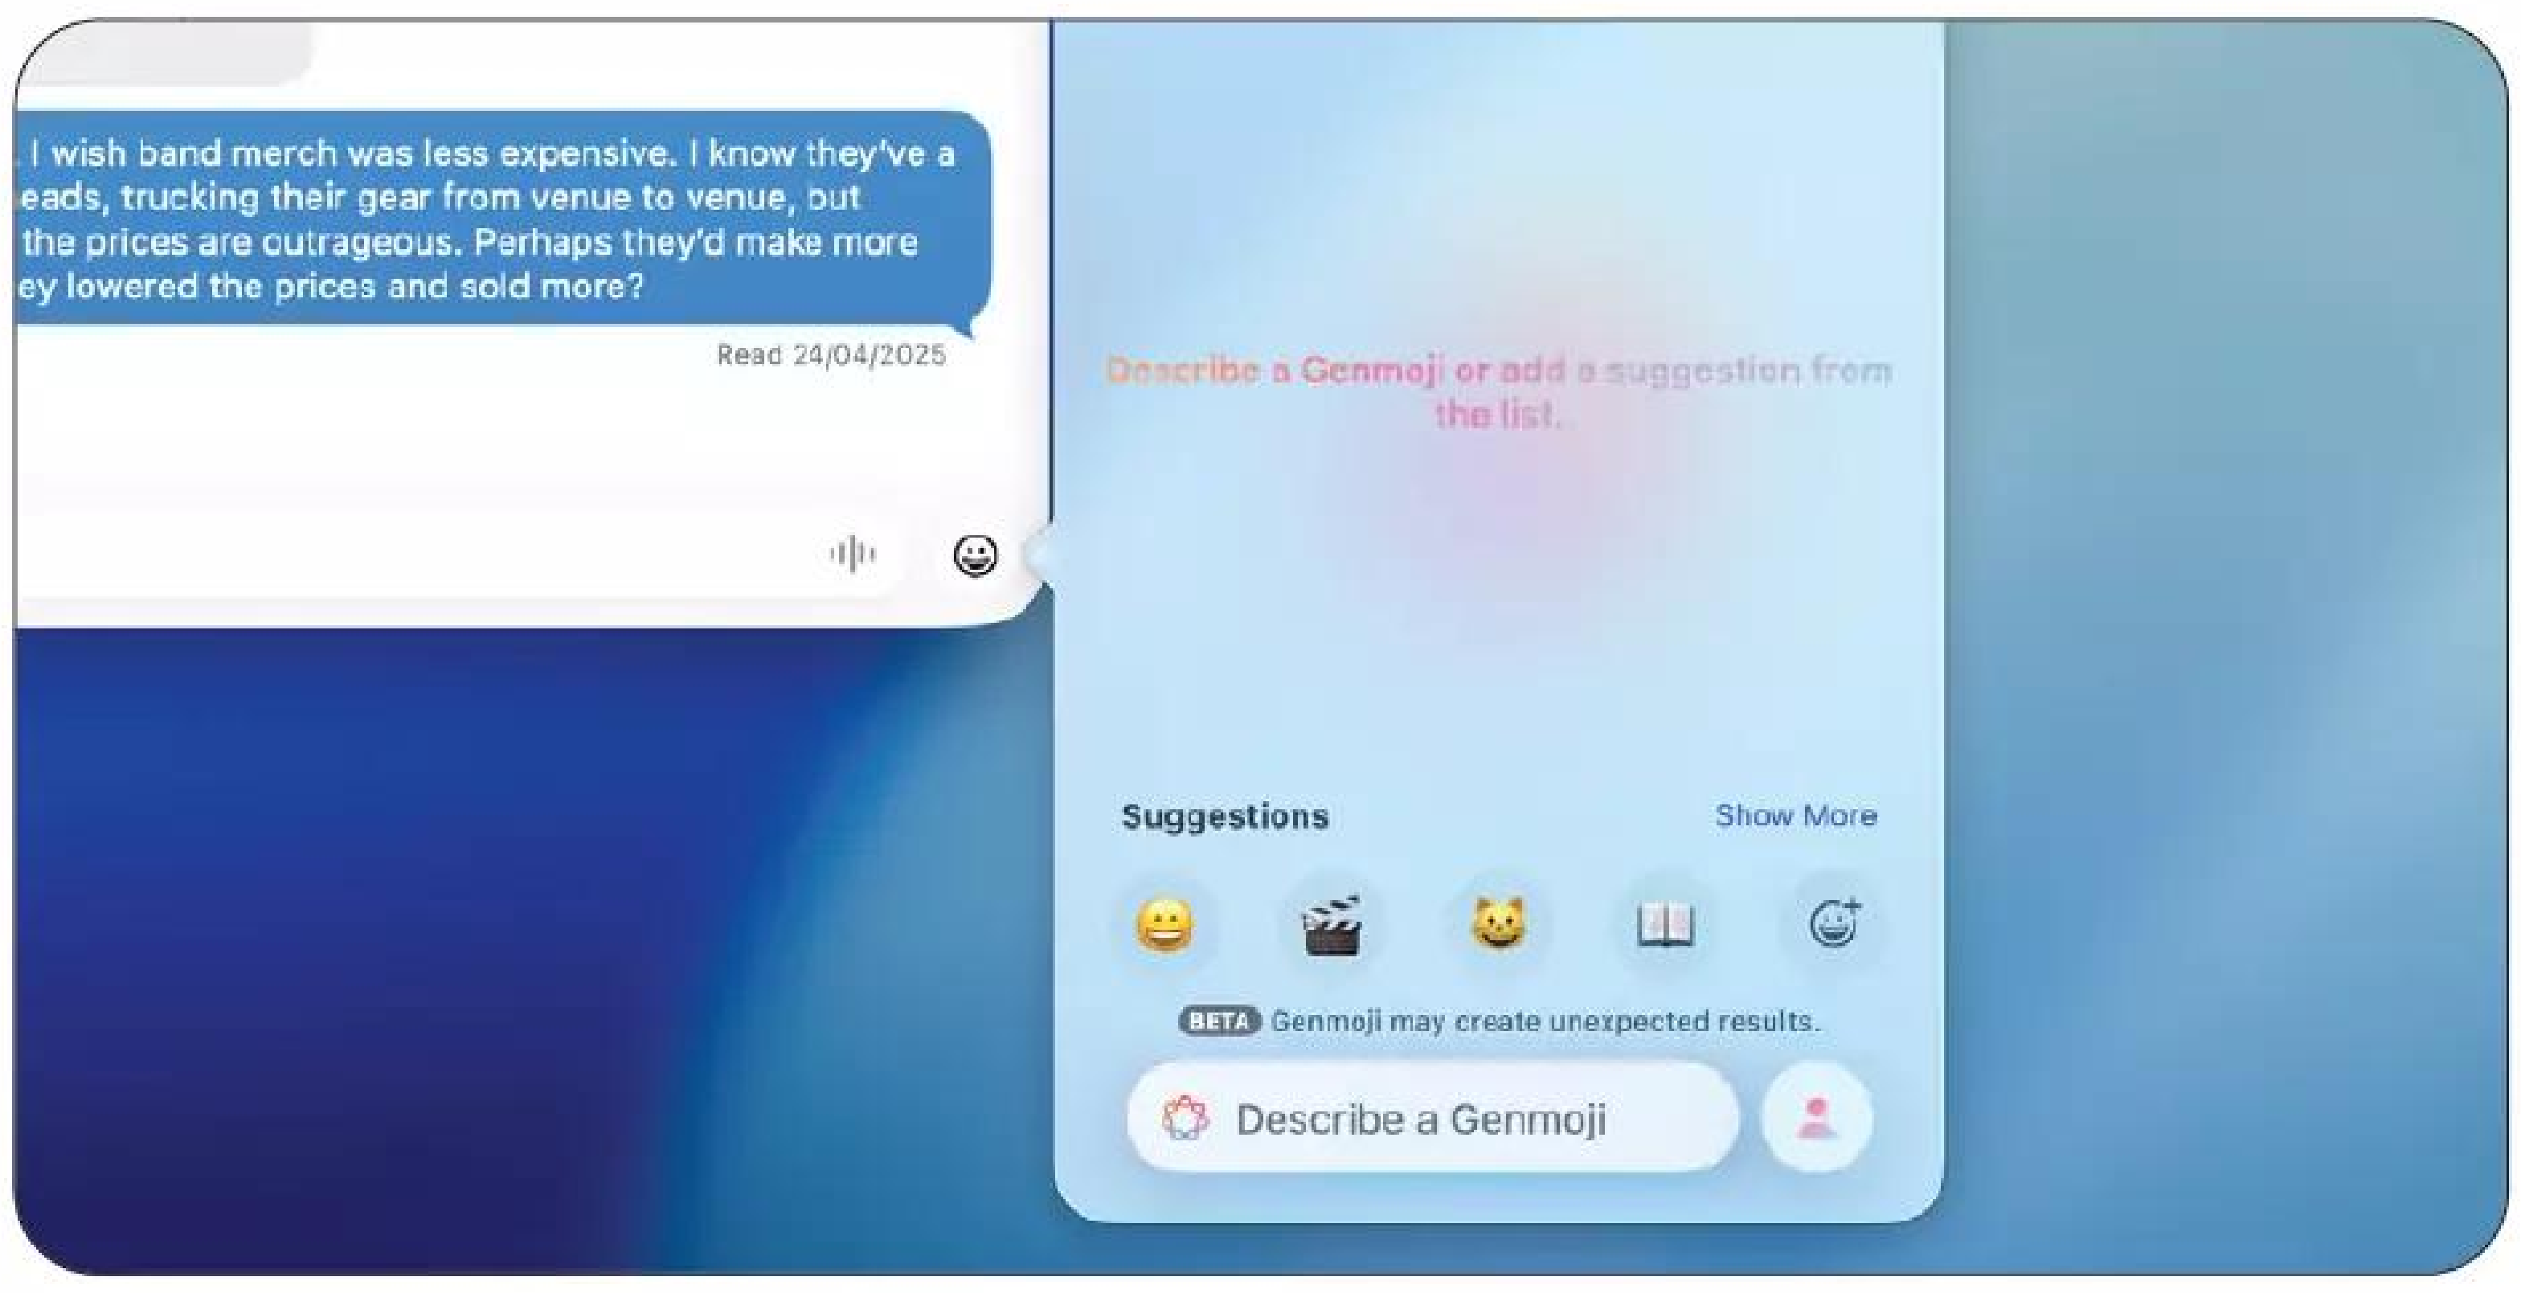
If you regret sending a message, or notice a mistake, right-click the message and select Undo Send or Edit. You can do this for up to 15 minutes after sending. It's only available in blue-bubble messages, and both parties must be on Ventura or iOS/iPadOS 16 or later.



Making Genmoji with AI

If you can't find the right emoji for the occasion, why not make your own? Apple Intelligence can do it, and they're called Genmoji!





I wish band merch was less expensive. I know they've a
eads, trucking their gear from venue to venue, but
the prices are outrageous. Perhaps they'd make more
ey lowered the prices and sold more?

Wed 19 Feb at 4:13 pm

Hey, do you want to go to the party Saturday? I'll give you a lift.

Sat 22 Mar at 1:49 pm

Thu 24 Apr at 12:17 pm

Hey Ian, our favourite band is in town tomorrow night.Shall I get tickets? It would be great to see them live again.

Good idea. Do get those tickets. I still have the t-shirt from last time we saw them, so I'll wear it to tomorrow's gig.

You unsent a message

Excellent, I want to buy a t-shirt this year. I'll probably get a long-sleeved one, as I don't have many of those. I'd like a hoodie, but they're so expensive at gigs.

That's true. I wish band merch was less expensive. I know they've a lot of overheads, trucking their gear from venue to venue, but these days the prices are outrageous. Perhaps they'd make more money if they lowered the prices and sold more?

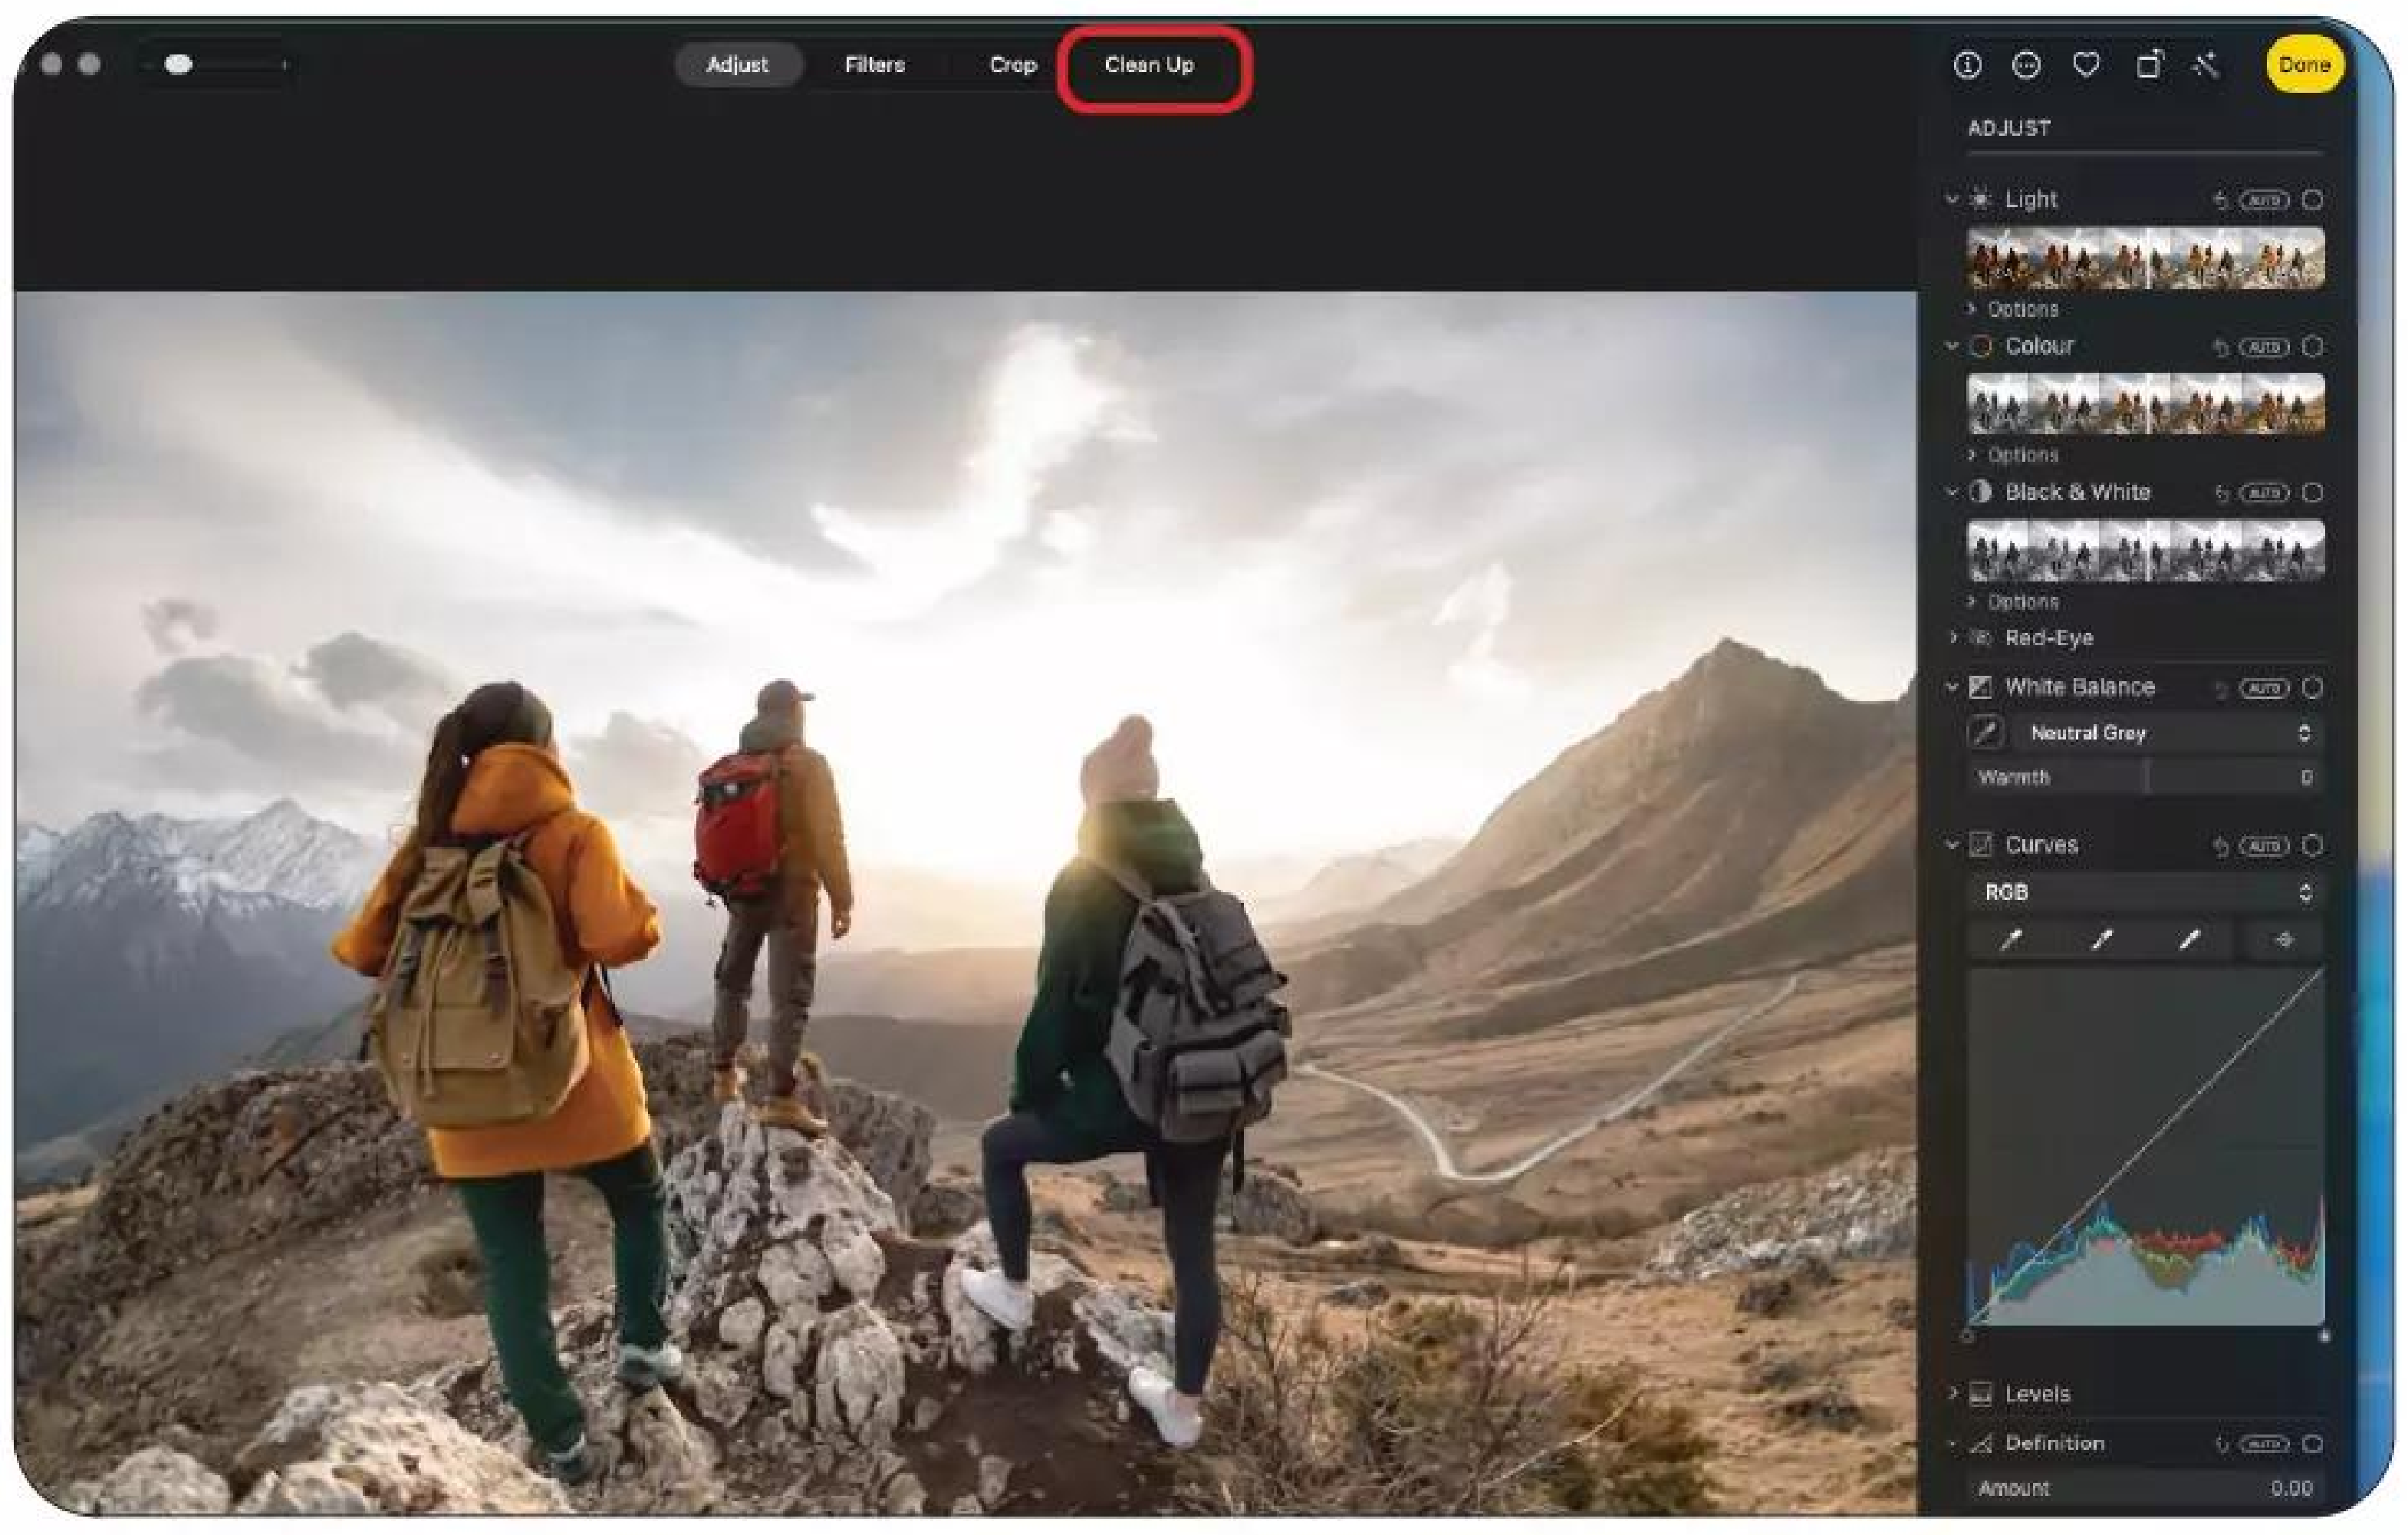
Apple Intelligence in Photos

Apple Intelligence also improves the way we use the popular Photos app. Using Apple Intelligence, it's far easier to find what you're looking for when searching your photo and video library. You get better movies of stories to enjoy too, and perhaps best of all, Apple Intelligence can remove unwanted features in a photograph to improve your compositions and much more.

Remove Unwanted Features



Adjust

WITH JUST A DESCRIPTION
Describe a memory...

3 To create a new memory using Apple Intelligence, click Collections in the sidebar then click the Type to Create field. You can then build a new memory from your photos and videos just by typing a description. You can add music too.

1 The dates when currently visible pictures were taken and where possible, the locations.

2 The +/- icons increase and decrease the size of your preview images.

3 Use these two buttons here to view your photos arranged according to the years or months in which they were taken.

4 Click here to see all your photographs in the Photos app, arranged as thumbnails. Double-click on a thumbnail to open a photo, filling the application window.

5 Use this button to toggle between regular thumbnails of your photos, as seen here, and square-shaped images that leave little border.

6 Click here for a menu that lets you filter your photos, showing only favourites, edited pics, photos, videos and more.

7 Click here to show or hide screenshots and/or photos that have been shared with you.

8 Select or open a photo and then click the 'i' for the information window. Here you can review where and when it was taken, add captions and more.

9 The Share button lets you add the picture to shared albums, send it using Mail, AirDrop, Messages and more, add it to Notes or Reminders and even set a desktop picture.

10 Choose a photo and click the heart to identify a picture as one of your favourites.

11 Click on a photo thumbnail and then click this icon to rotate it 90 degrees anti-clockwise.

12 The search field. You can search for terms like 'birthday', 'holiday', 'Christmas' and more, to find photos taken on these occasions, and video thumbnails appear in searches too.

13 The sidebar options represent different ways of viewing your photo collection. The Library option shows all your photos, and Collections arranges and views your media according to given criteria.

14 The Pinned section lets you review pictures you've favourited or recently saved, a map for showing the location of pics you've taken and more.

15 The heart seen in the corner here shows you've identified this photo as a favourite. Click the heart to unfavourite it again.

Using Meta AI On Your Mac

It's no surprise that Meta Platforms, formerly Facebook, has thrown its metaphoric hat into the artificial intelligence ring. First installed on Ray-Ban Meta glasses, you can now use Meta AI on your Mac's Safari web browser at https://www.meta.ai. Let's see how it works via macOS Tahoe.

1. Log in through Facebook and your Facebook avatar appears here.
2. The cog icon here opens the Settings pop-up window. Use it to access the Settings panel, AI demos, AI Studio and to Log out of your Facebook account.
3. Open and close the left-hand sidebar here. You may want to close it if using a small screen, and need the extra space for your AI work.
4. Click here – or press CMD-K – to open a new input window and start a new conversation with Meta AI.
5. The Home button takes you back to the page you see here.
6. Would you like to see what Meta AI can do, including answering questions and creating art? Click Discover to see some examples.
7. Your history with Meta AI for the last seven days is listed here. Click on an item in the list to make the enquiry again.
8. The text entry field. Type your request to Meta AI and click the blue circular icon with the arrow on it to send it.
9. You can create docs and add images using the Canvas feature. It's in beta, so don't expect it to be perfect.
10. Click this icon and you can create an image using Meta AI.
11. These are examples of things that have been asked of Meta AI. Click on one of them to make the same request. It's a good way of getting in touch with what Meta AI can do.
12. At the foot of the page are more examples of Meta AI requests. They're the same you see when you click the Discover icon [6]. Click on one to see it in full size.

ChatGPT On Your Mac

Point your Safari web browser at https://openai.com/chatgpt/download and download the version of the ChatGPT app required for your Mac or MacBook. It's completely free, and you can ask it absolutely anything, within reason and it will show you the generated results.

1 Open and close the sidebar with this icon. The sidebar gives access to your history with ChatGPT and allows you to explore different chatbots.

2 As you'd expect, the pencil-and-paper icon here lets you start a new chat.

3 Click ChatGPT here for a pop-up menu, from which you can upgrade to ChatGPT Plus, switch between ChatGPT Plus and the regular ChatGPT and turn Temporary Chat on and off.

4 Click this Sharing icon to share a link to the chat. Just the thing if you want to let a friend and colleague know what you just learned through ChatGPT.

5 This icon opens a smaller, second ChatGPT window that lets you ask supplementary questions without interrupting the main question-and-answer session in the main window.

6 Your questions to ChatGPT are shown in a grey 'bubble', displayed on the right-hand side of the ChatGPT window.

7 ChatGPT's answers are on a white background, and shown on the left-hand side of the main window.

8 The text entry field. Type your request to ChatGPT and click the blue circular icon with the arrow on it to send it.

9 This is the text window. Type your questions to ChatGPT here, and when you've finished, tap Return or click the black circular icon in the bottom right, which turns into an up-pointing arrow after you've typed.

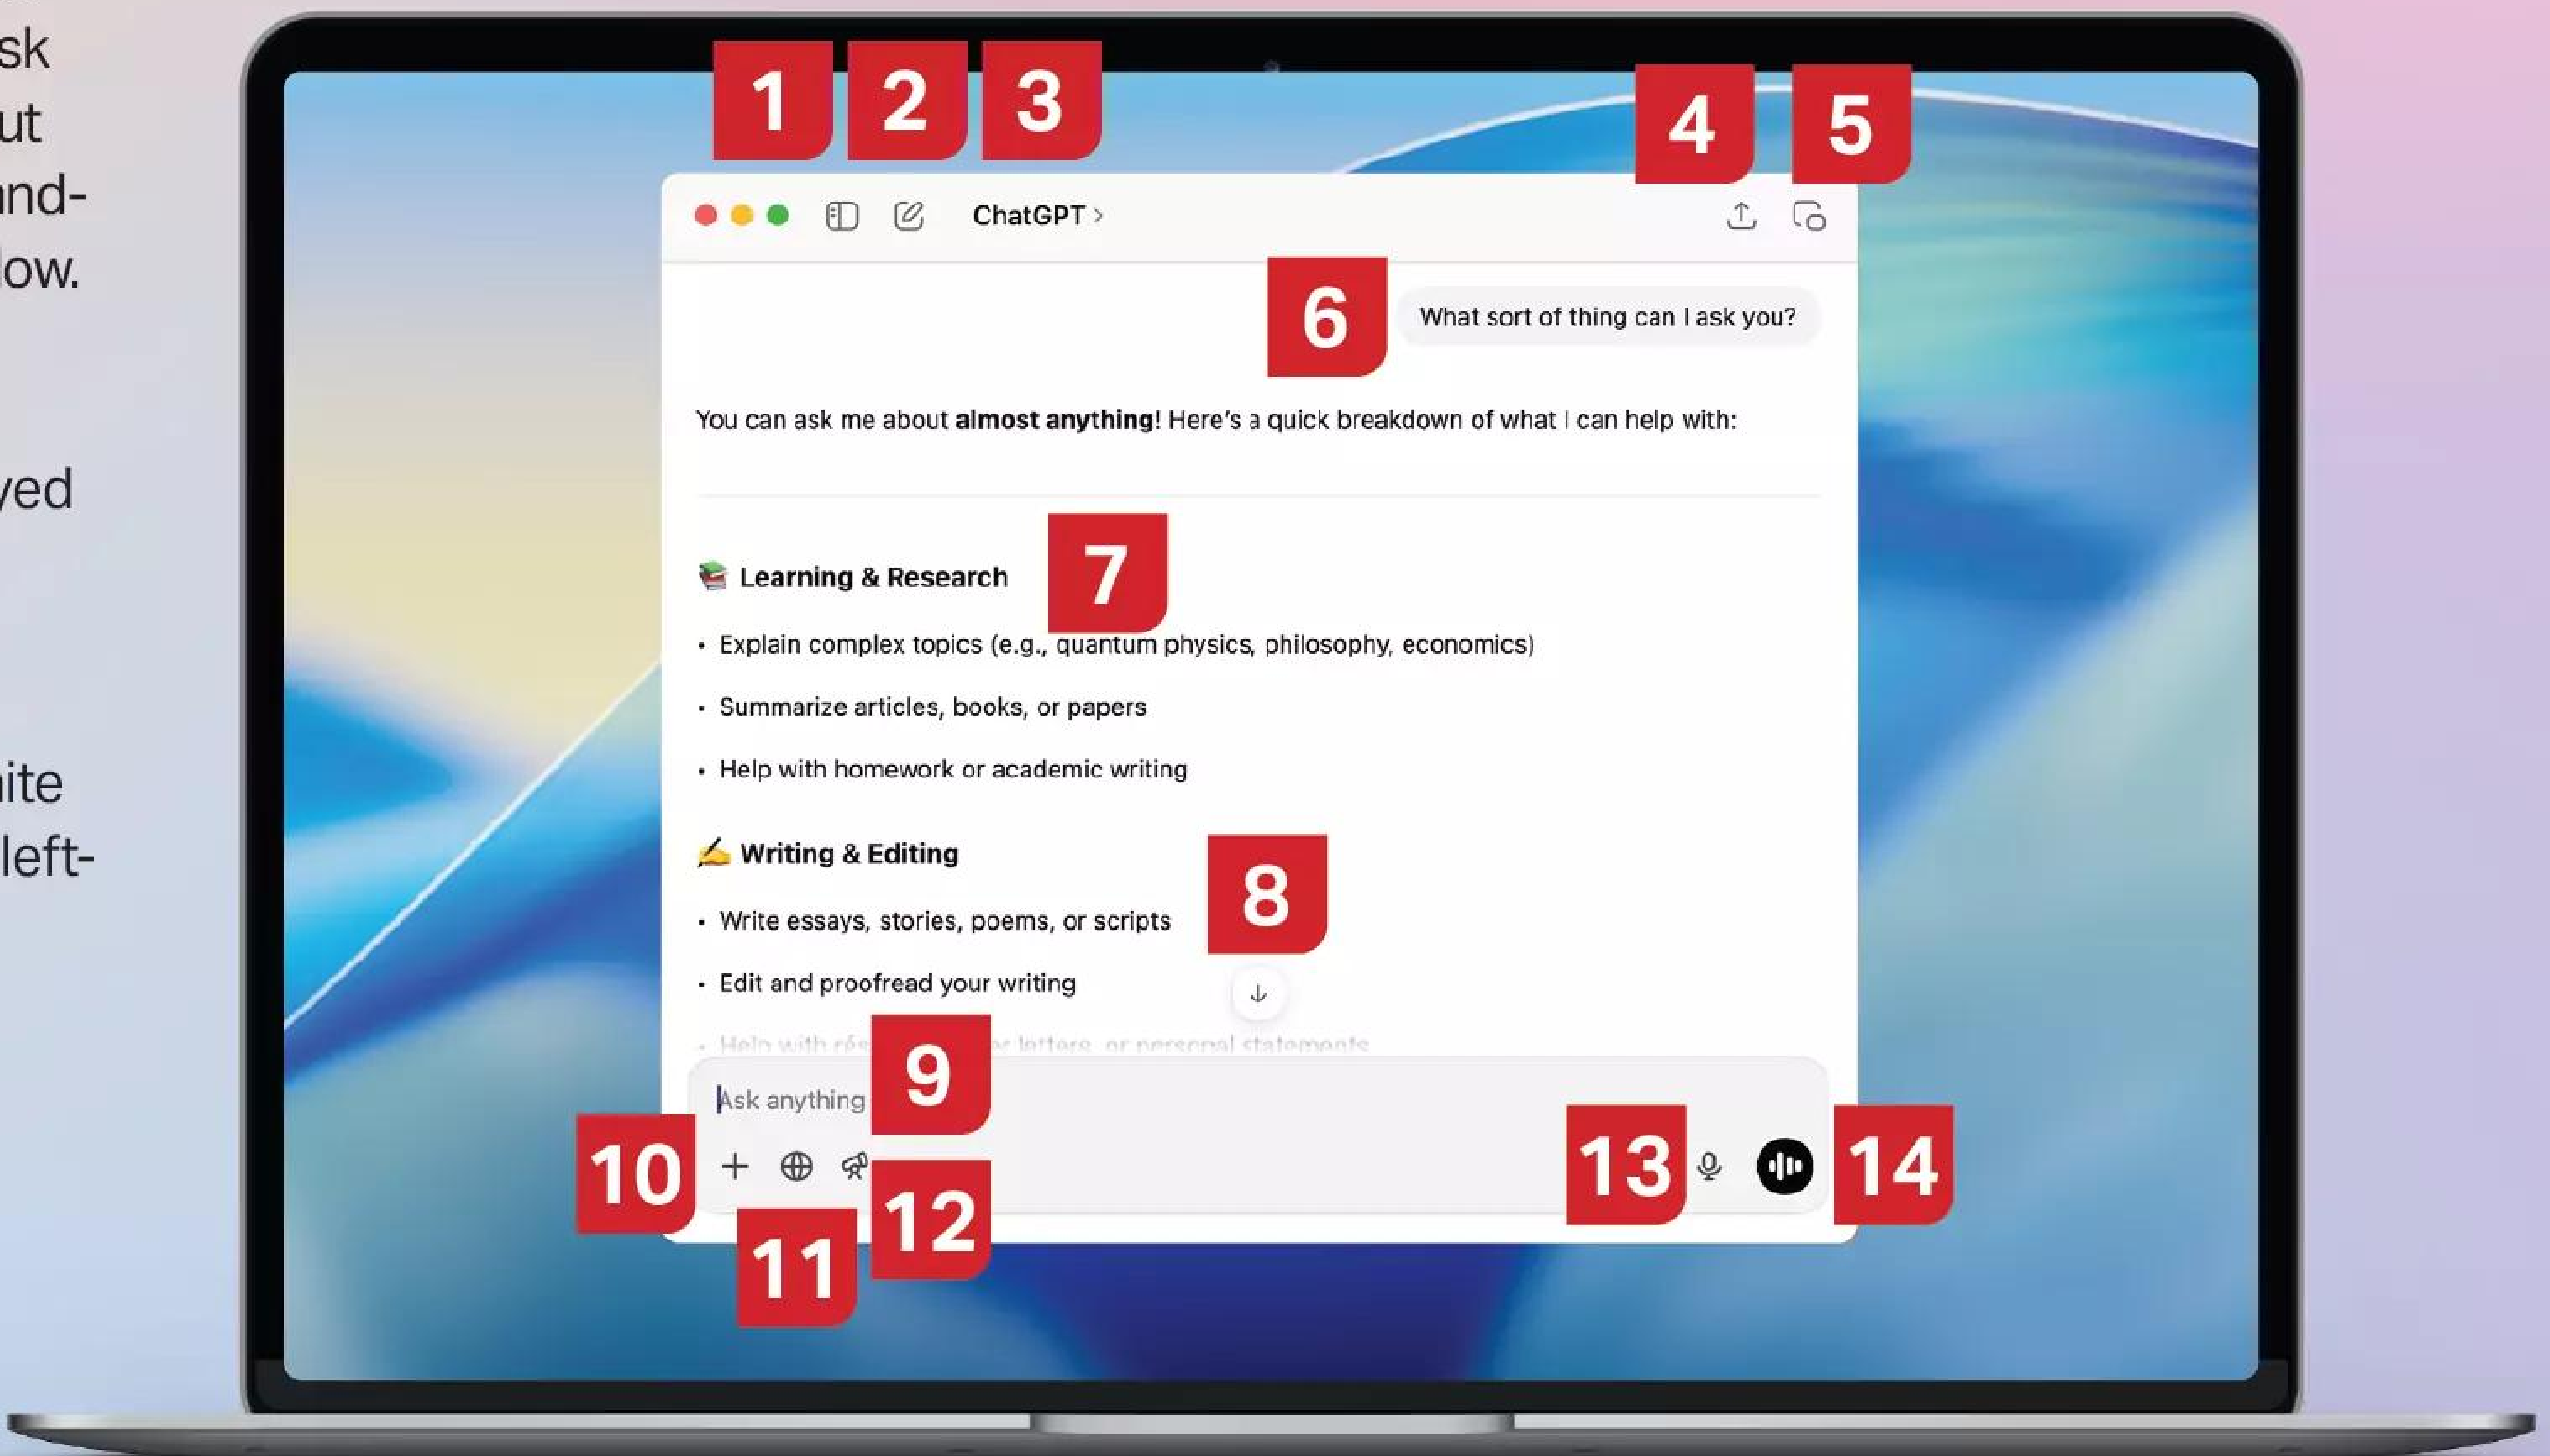
10 The Attach Content icon. Click here for a window that lets you Upload File, Upload Photo, Take Screenshot or Take Photo.

11 Click the globe icon to turn the web search on and off. With the web search on, enquiries made to ChatGPT will be treated as AI-powered web searches.

12 This is the Deep research icon; click it to toggle this feature on and off. An enquiry made with Deep research on takes longer, but it might yield information a regular one doesn't. Use it when a regular response doesn't give you what you need.

13 The microphone icon. No prizes for guessing what this does; click it and use text to speech instead of typing your enquiries to ChatGPT. Click the tick icon that appears in the bottom-right corner of the text field when you've finished speaking.

14 For even more speaking fun, click this icon when it's showing the wave form, as it is now, for a two-way speech conversation with ChatGPT.



What sort of thing can I ask you?

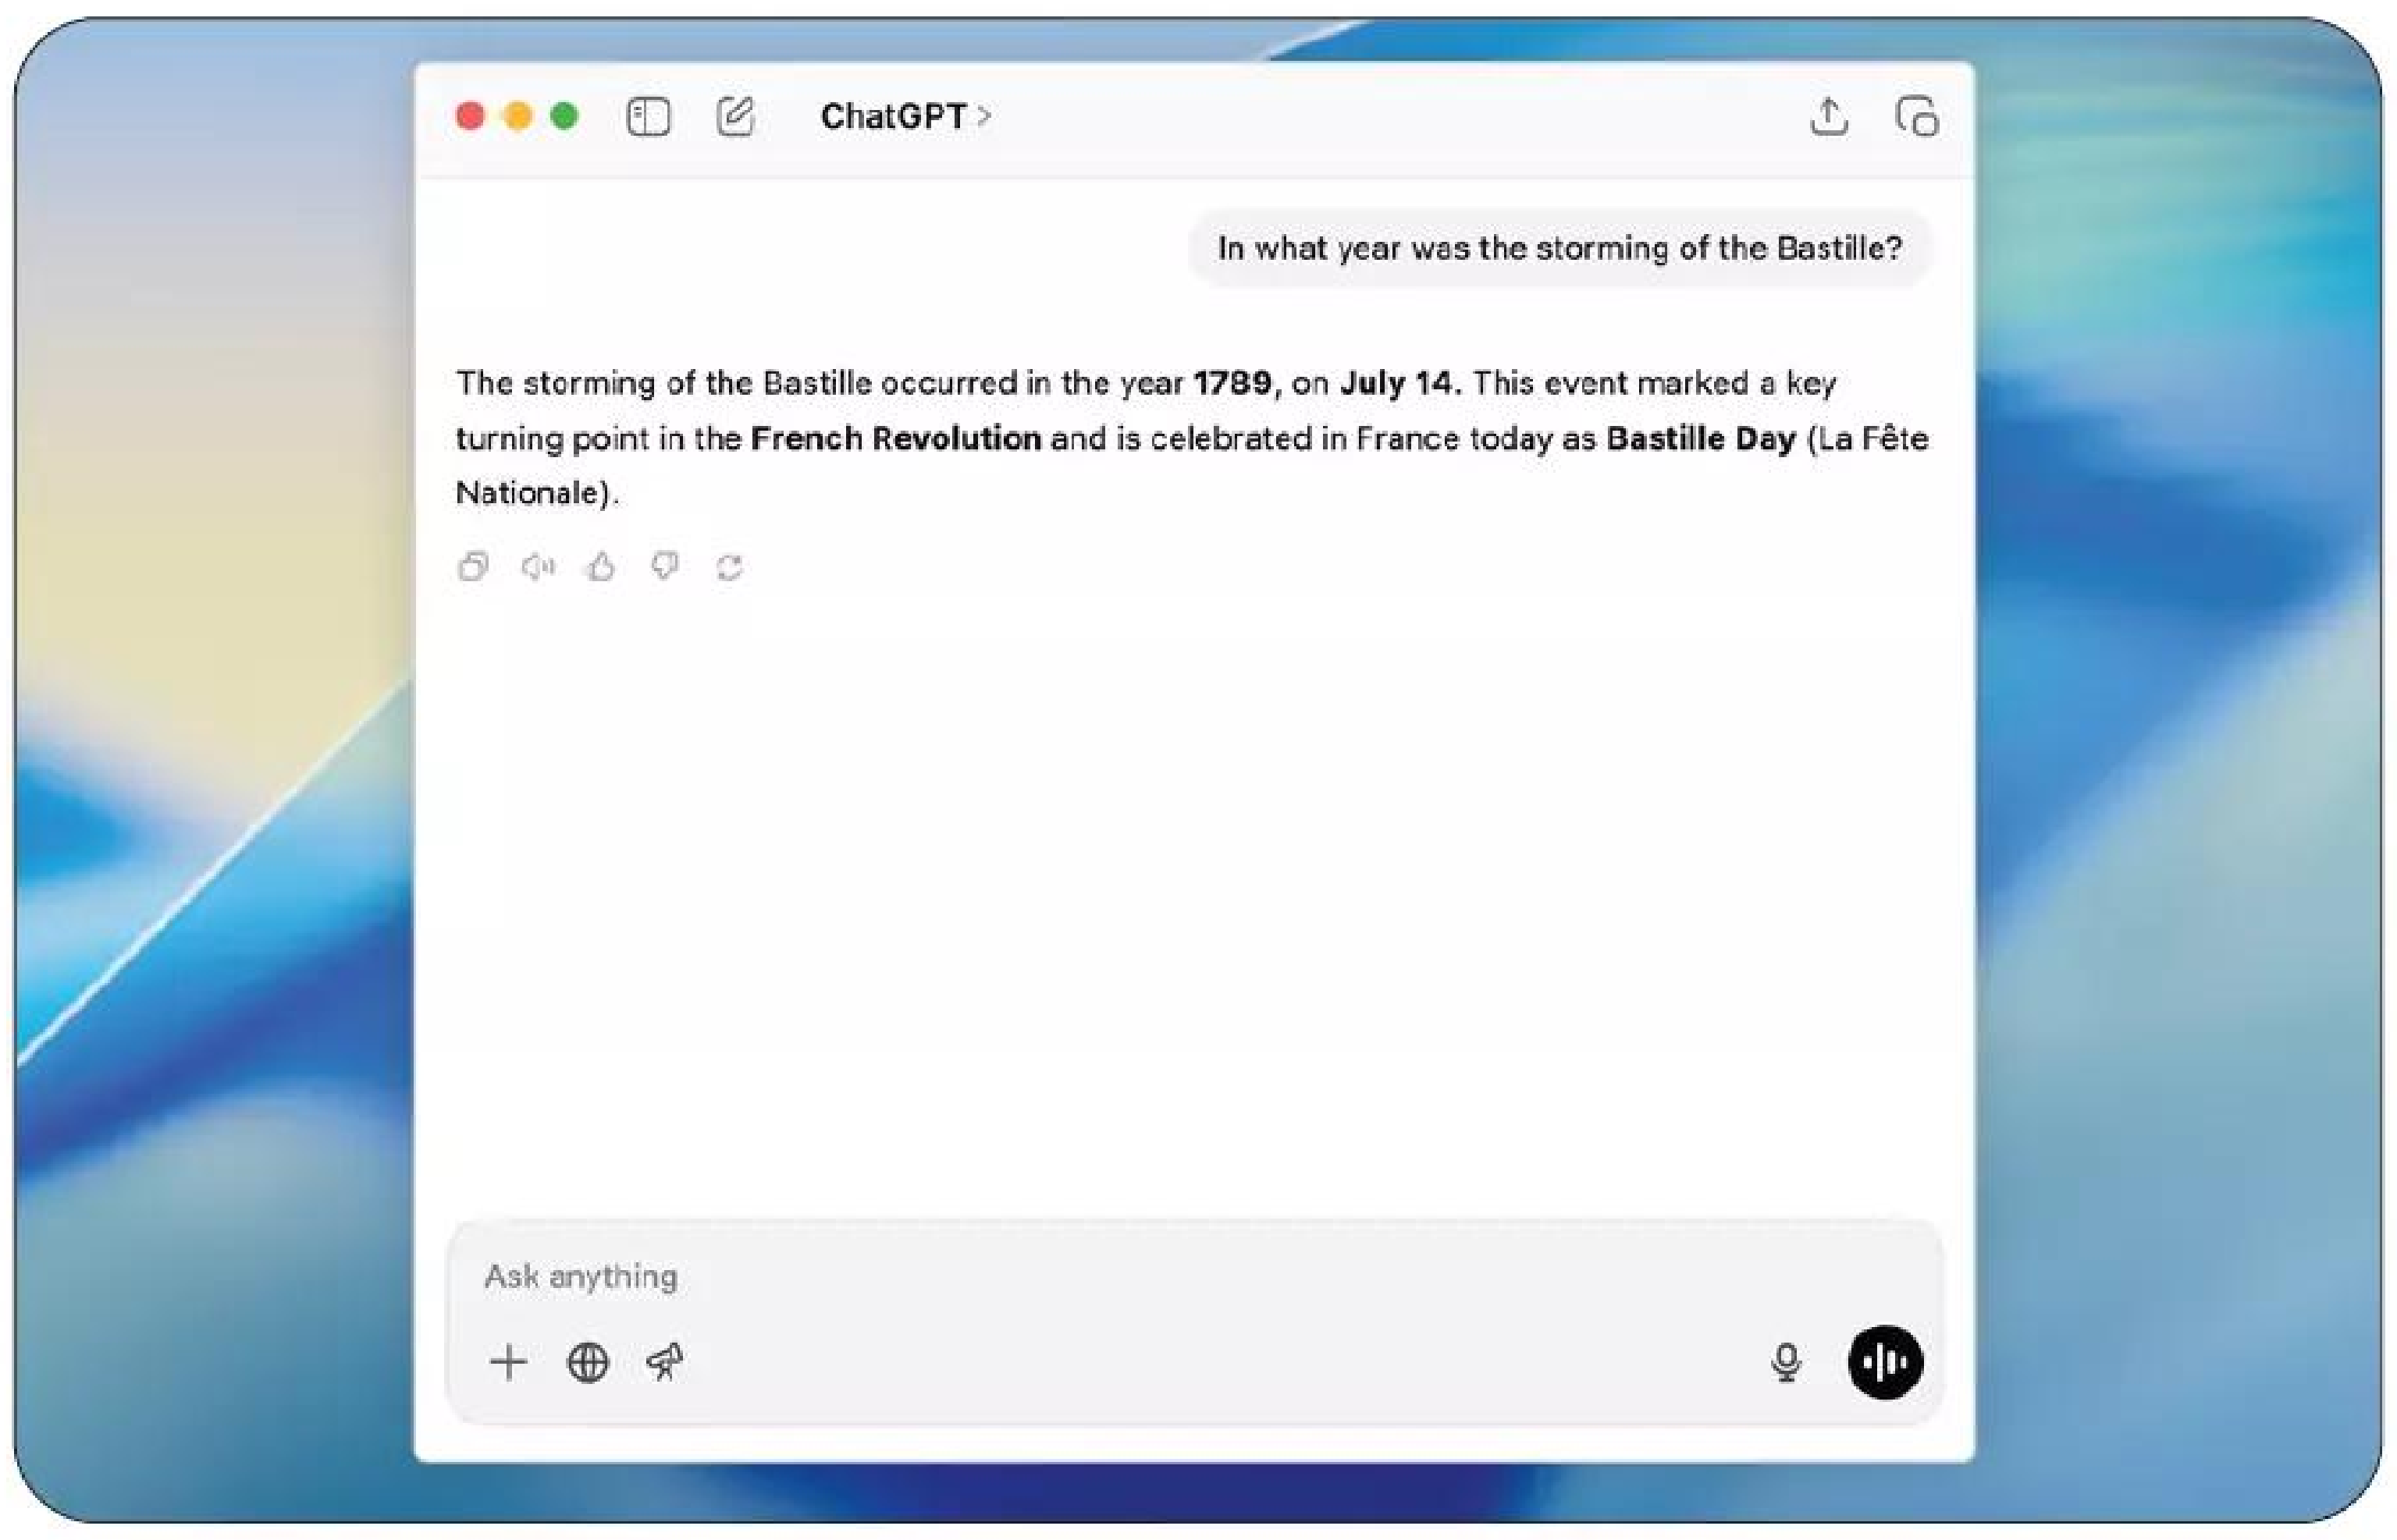
You can ask me about **almost anything**! Here's a quick breakdown of what I can help with:

📚 **Learning & Research**

- Explain complex topics (e.g., quantum physics, philosophy, economics)
- Summarize articles, books, or papers
- Help with homework or academic writing

✍️ **Writing & Editing**

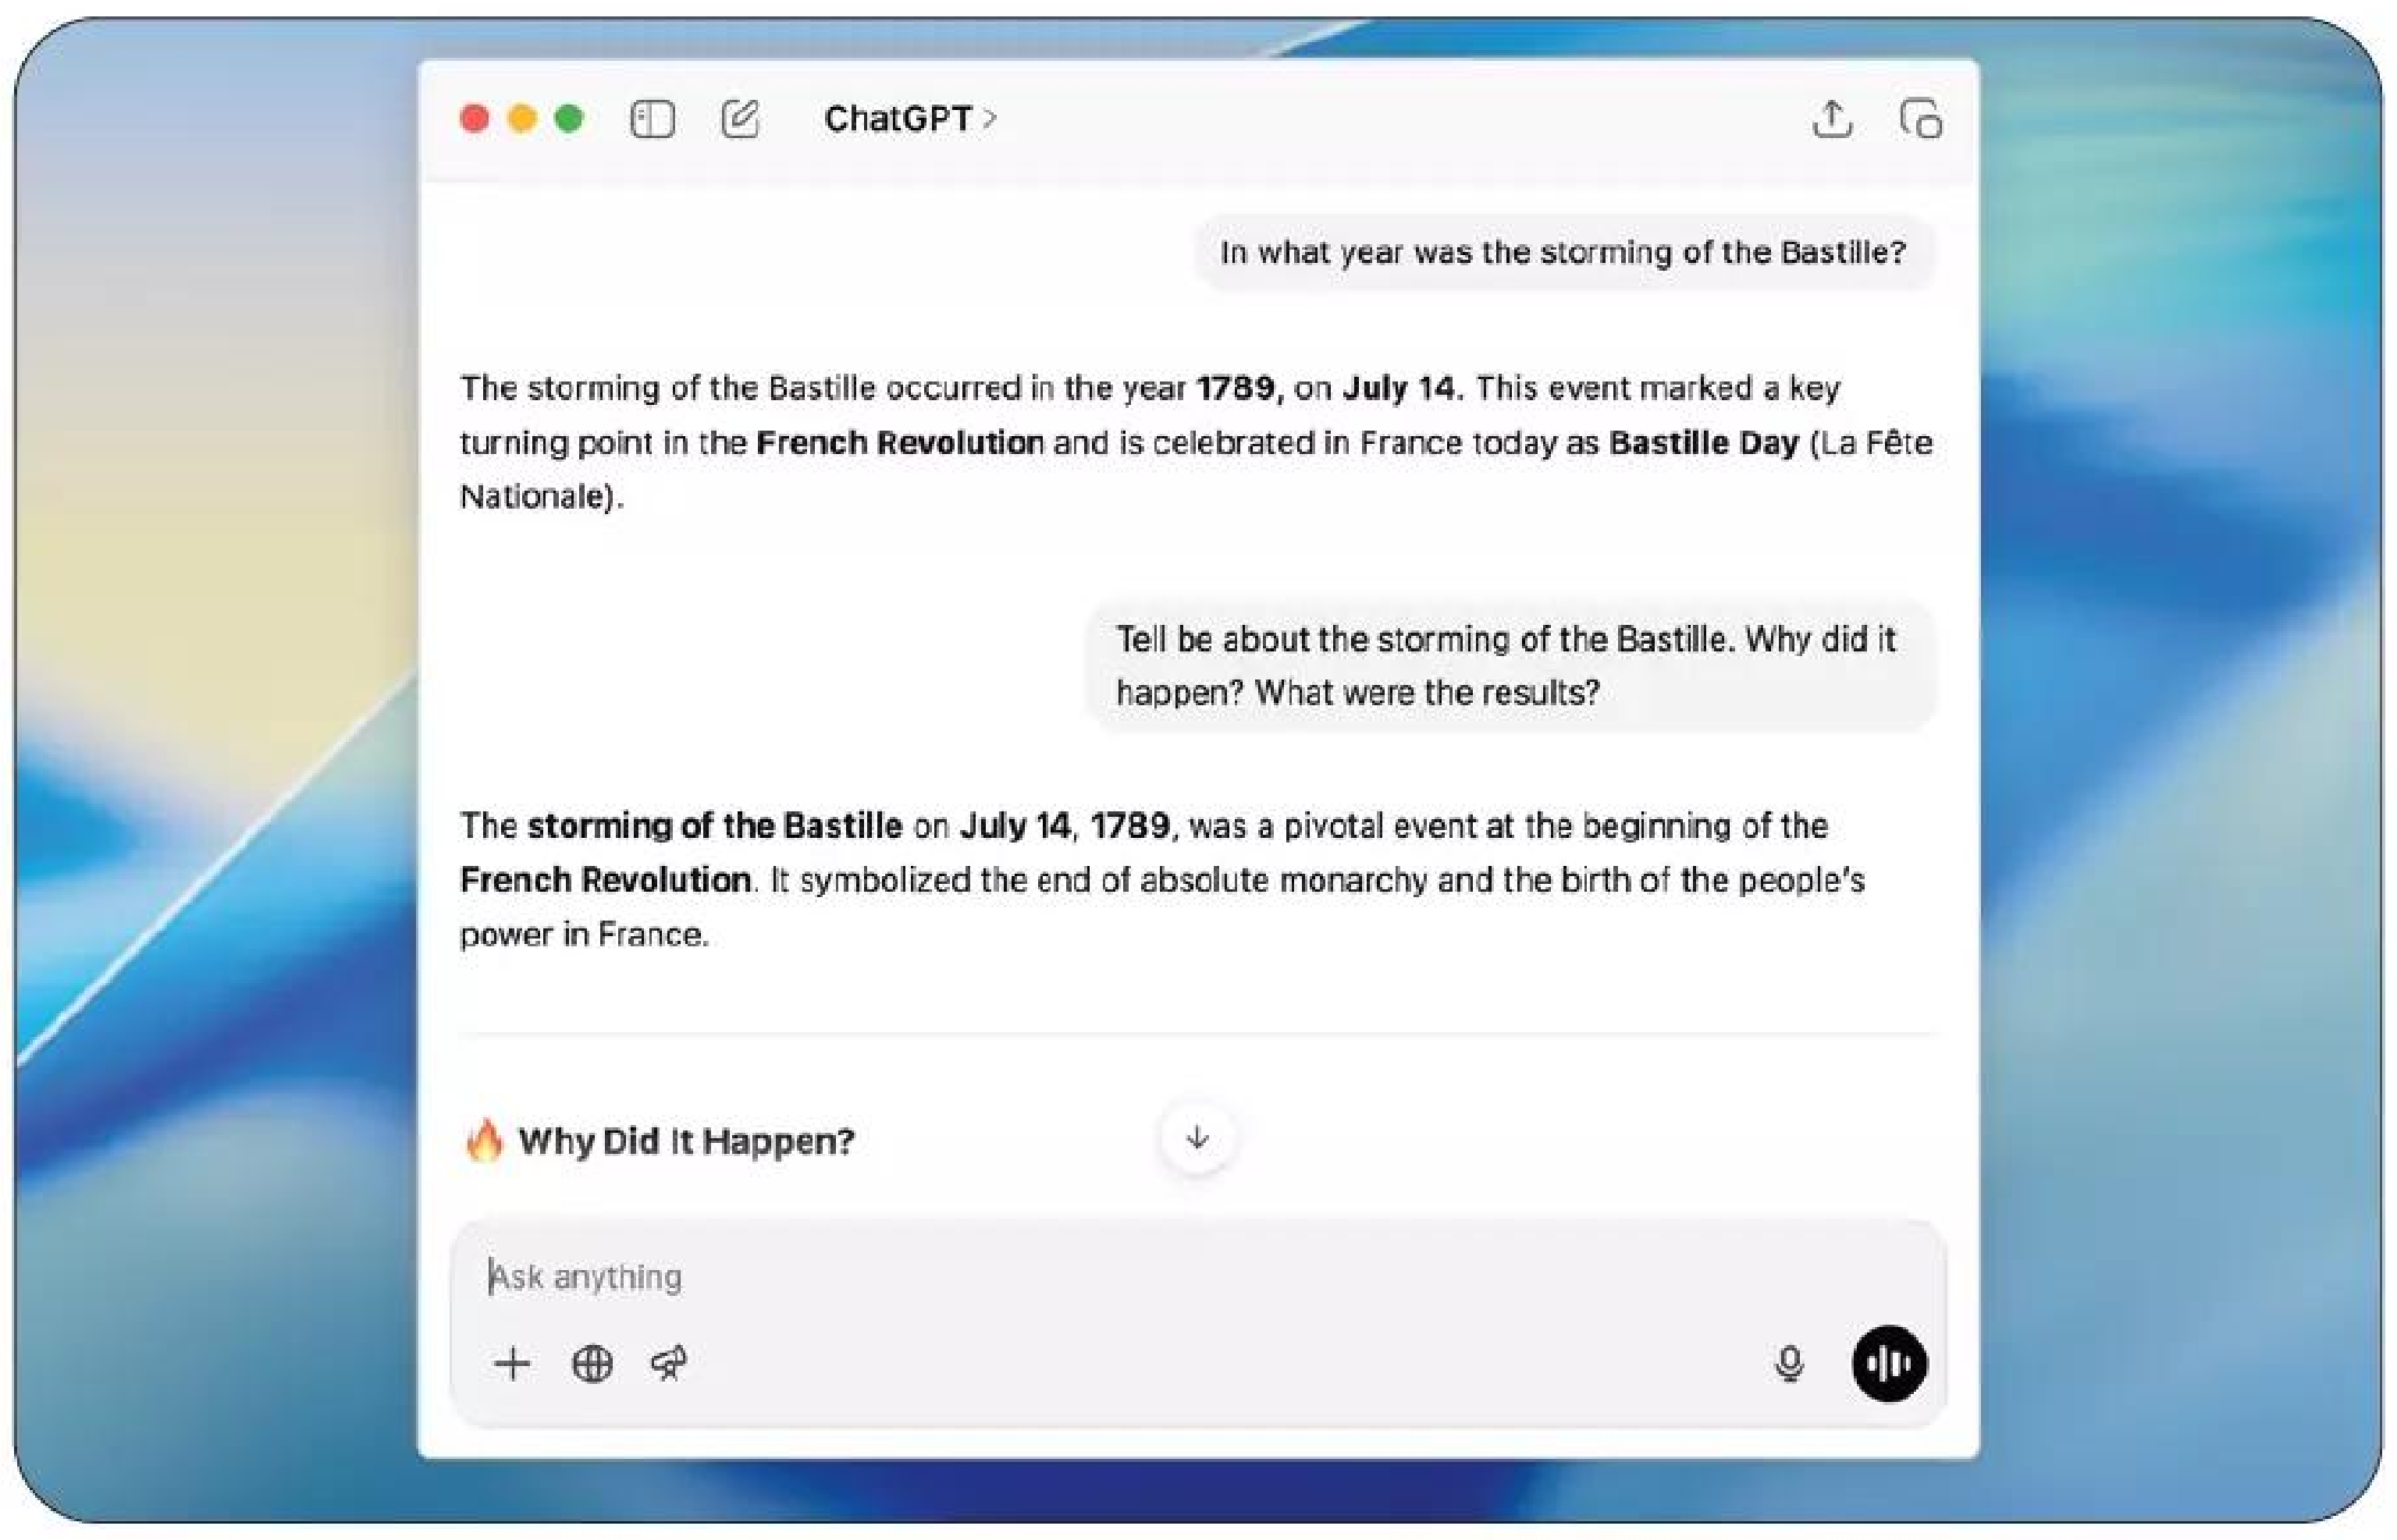
- Write essays, stories, poems, or scripts
- Edit and proofread your writing



In what year was the storming of the Bastille?

The storming of the Bastille occurred in the year **1789,** on **July 14.** This event marked a key turning point in the **French Revolution** and is celebrated in France today as **Bastille Day** (La Fête Nationale).

1 ChatGPT is ideal for making factual enquiries on pretty-much any subject. For example, we asked 'In what year was the storming of the Bastille?' ChatGPT responded with the correct answer, and a little background.



In what year was the storming of the Bastille?

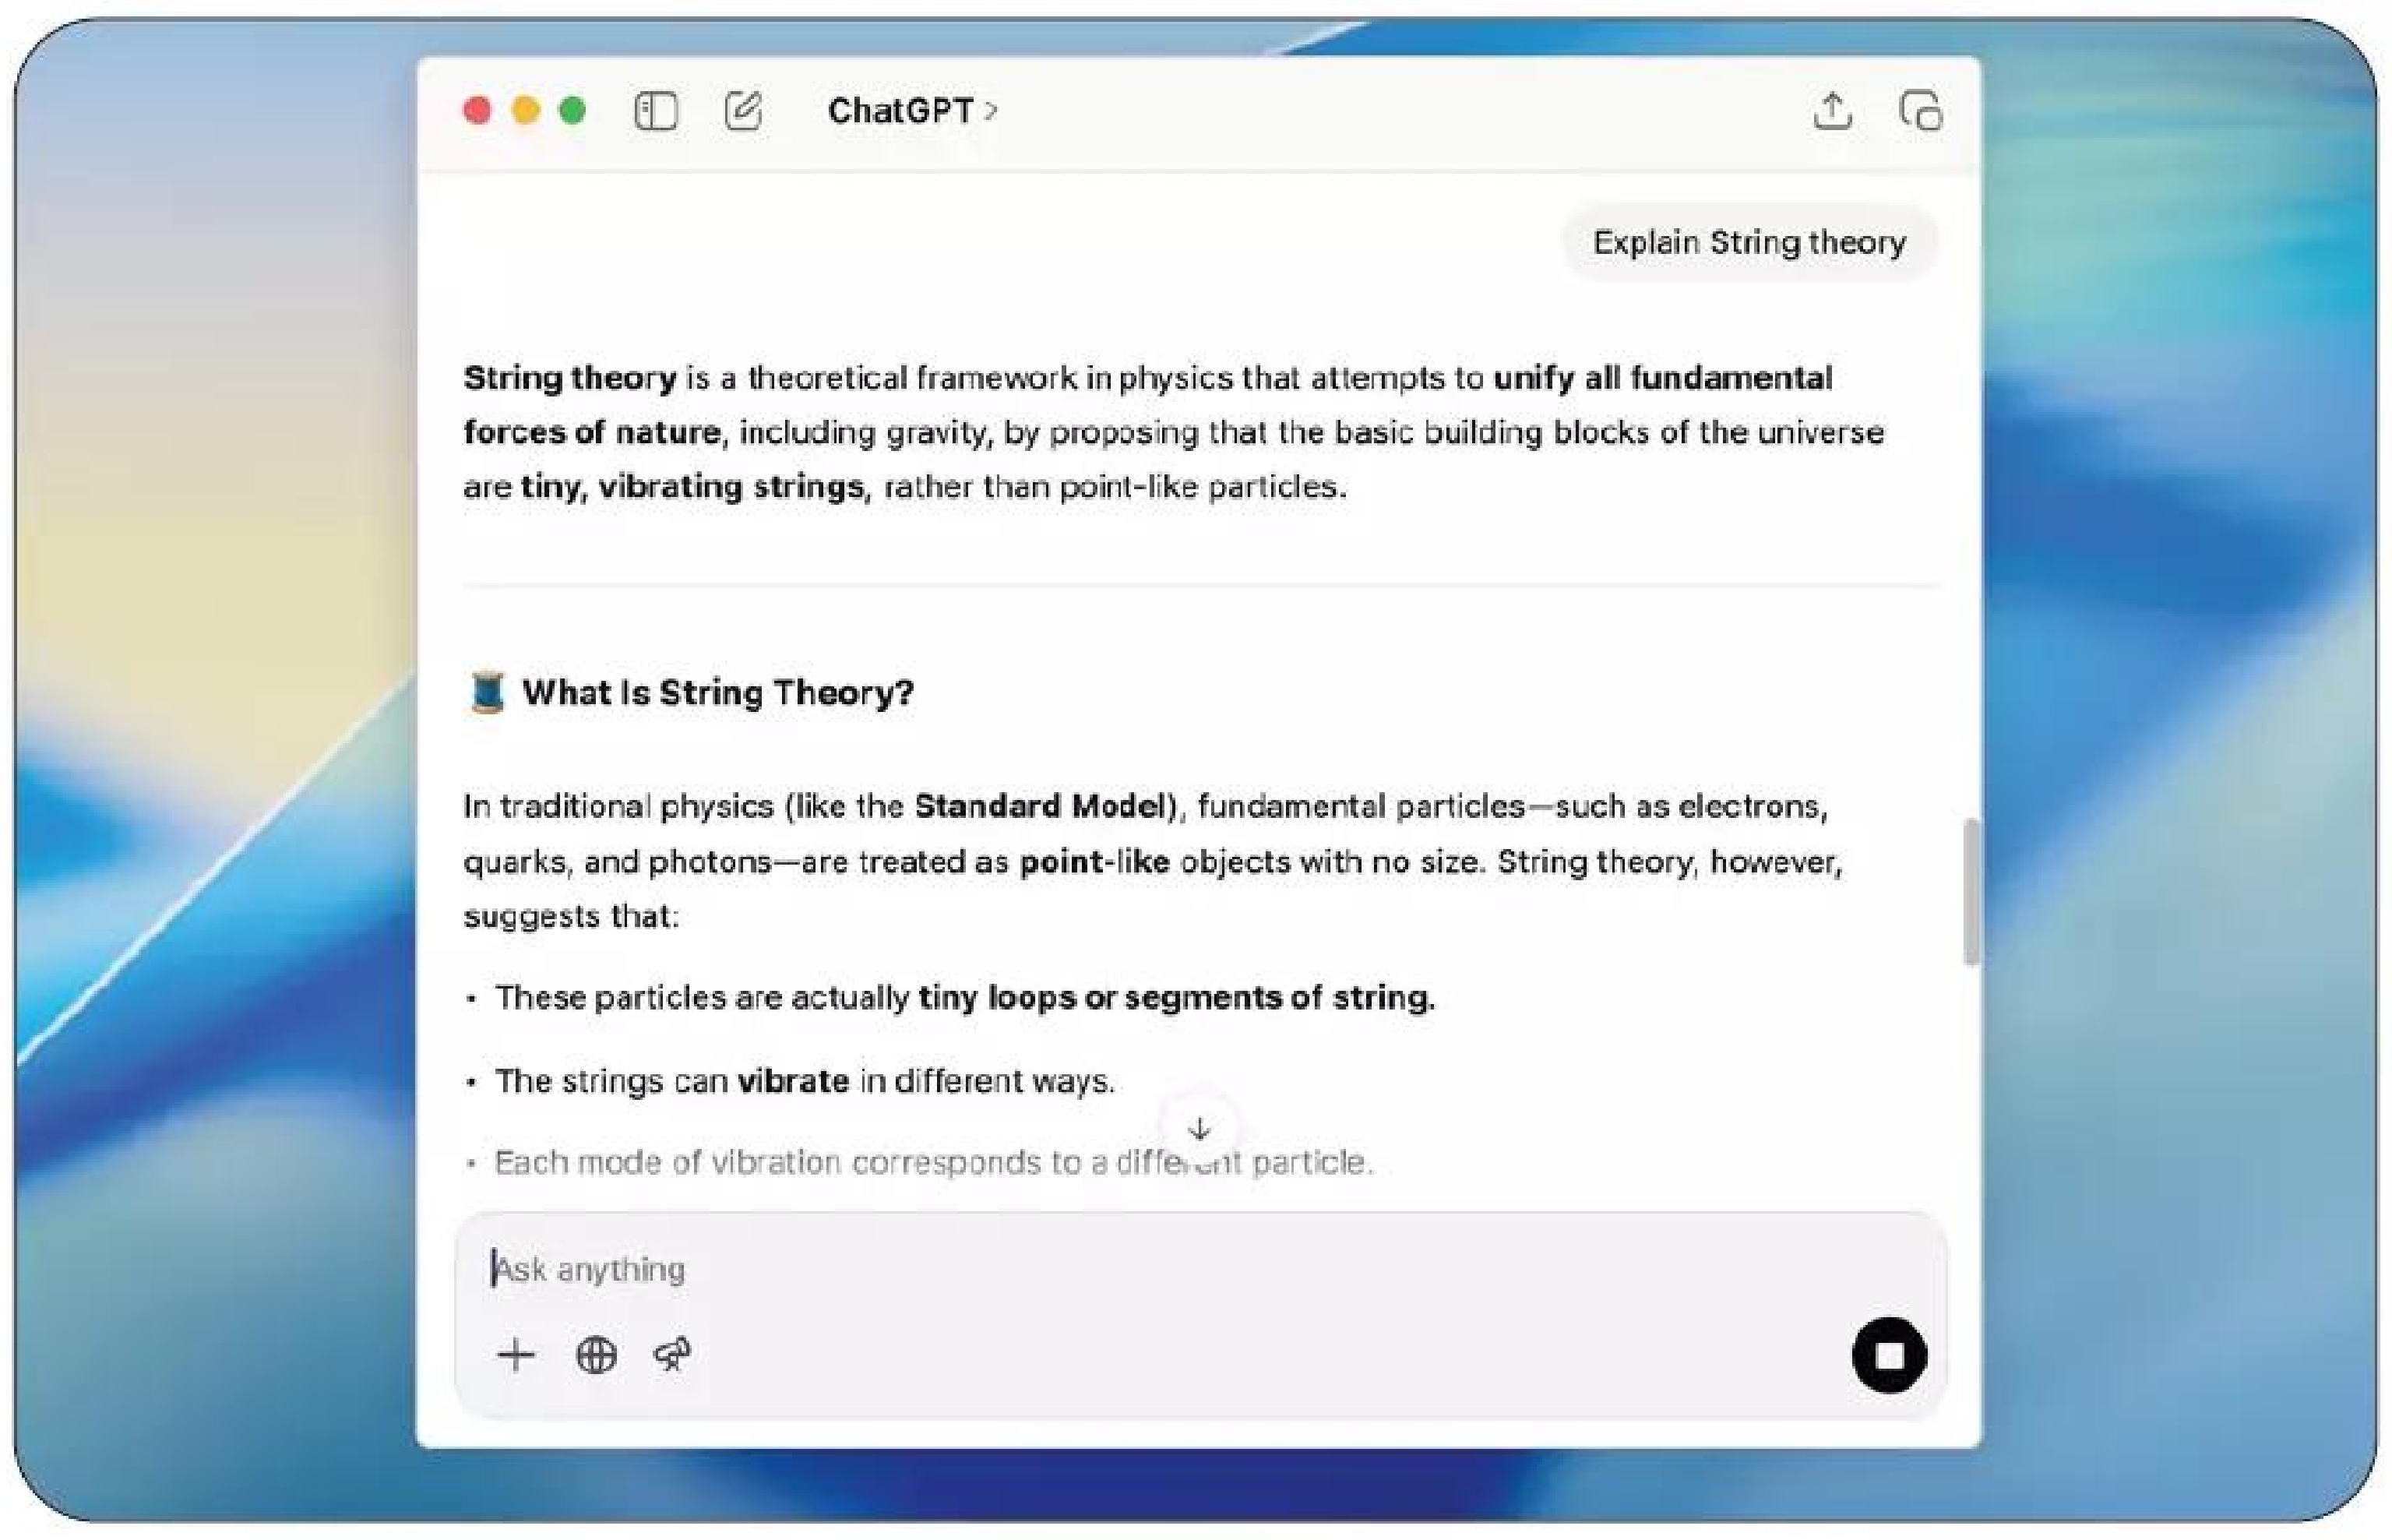
The storming of the Bastille occurred in the year **1789,** on **July 14.** This event marked a key turning point in the **French Revolution** and is celebrated in France today as **Bastille Day** (La Fête Nationale).

Tell be about the storming of the Bastille. Why did it happen? What were the results?

The **storming of the Bastille** on **July 14, 1789**, was a pivotal event at the beginning of the **French Revolution**. It symbolized the end of absolute monarchy and the birth of the people's power in France.

🔥 **Why Did It Happen?**

2 Taking things further, you can also ask less specific questions. We followed up our first question with 'Tell be about the storming of the Bastille. Why did it happen? What were the results? We got a more in-depth reply.



Explain String theory

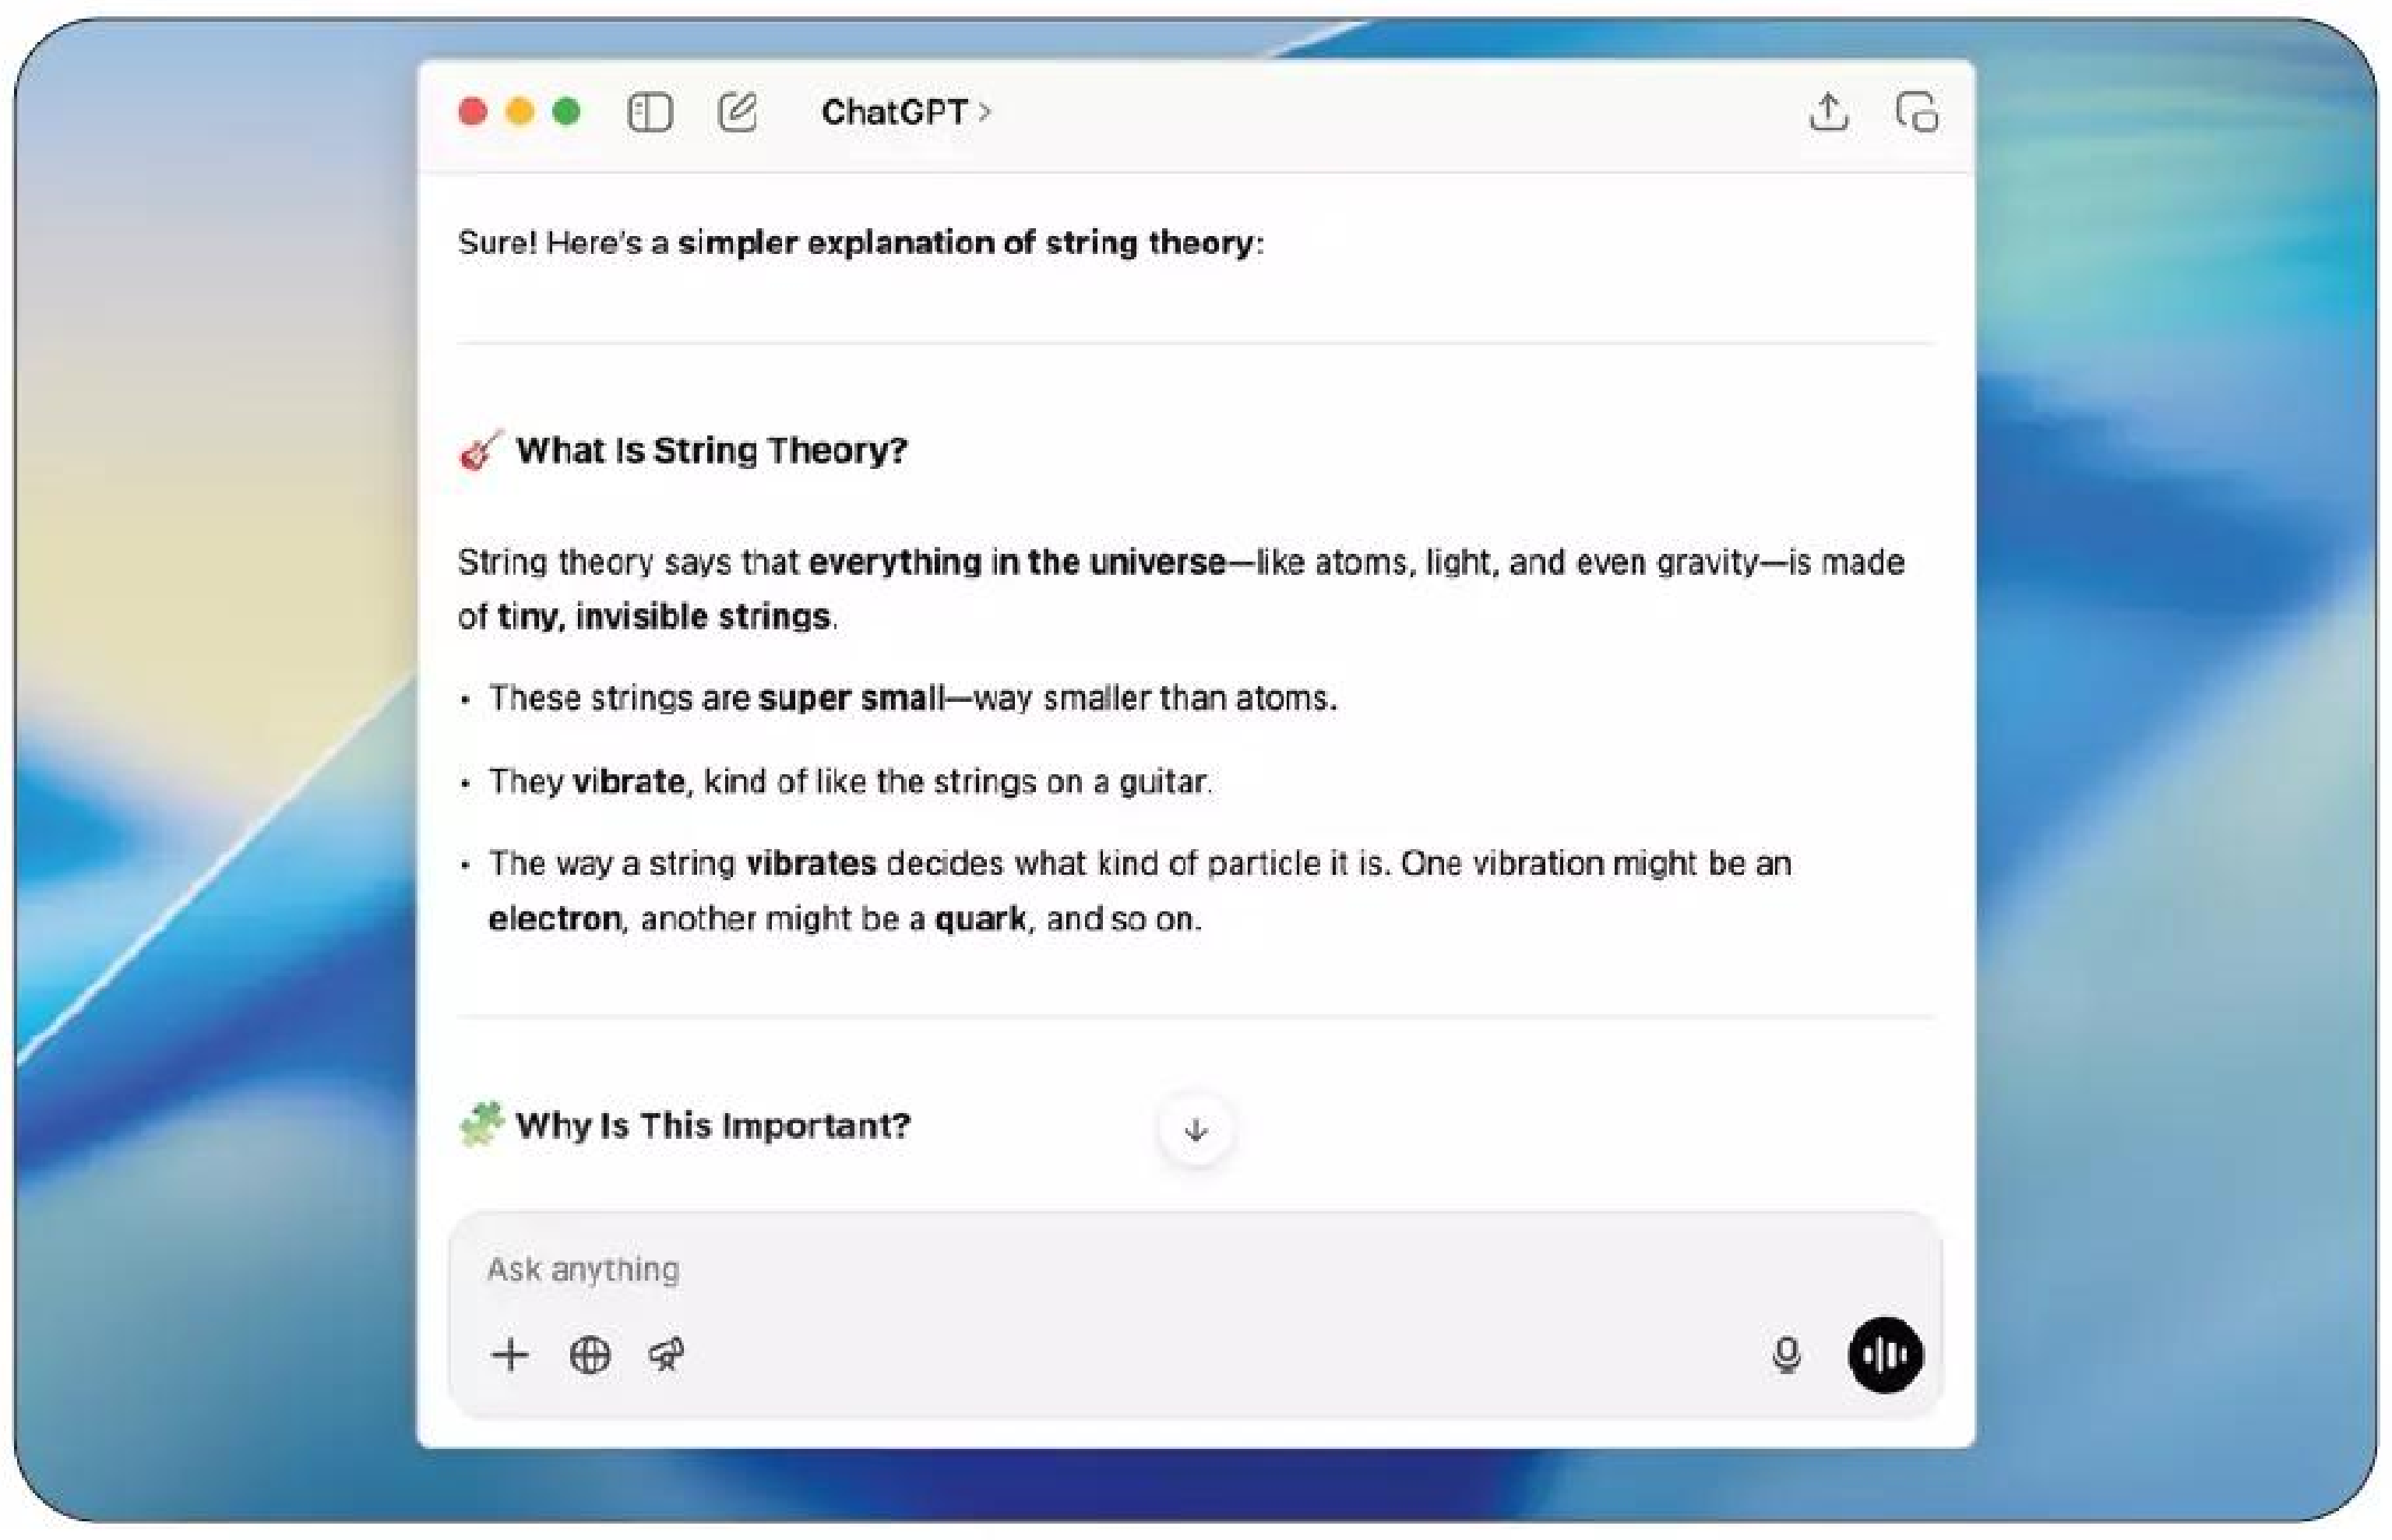
String theory is a theoretical framework in physics that attempts to **unify all fundamental forces of nature**, including gravity, by proposing that the basic building blocks of the universe are **tiny, vibrating strings**, rather than point-like particles.

🧵 **What Is String Theory?**

In traditional physics (like the **Standard Model**), fundamental particles—such as electrons, quarks, and photons—are treated as **point**-like objects with no size. String theory, however, suggests that:

- These particles are actually **tiny loops or segments of string.**
- The strings can **vibrate** in different ways.
- Each mode of vibration corresponds to a different particle.

3 ChatGPT can also explain very complex topics. Here we asked it to explain string theory to us. It gave a very comprehensive answer, which did an excellent job of getting to the heart of this area of physics.



Sure! Here's a **simpler explanation of string theory**:

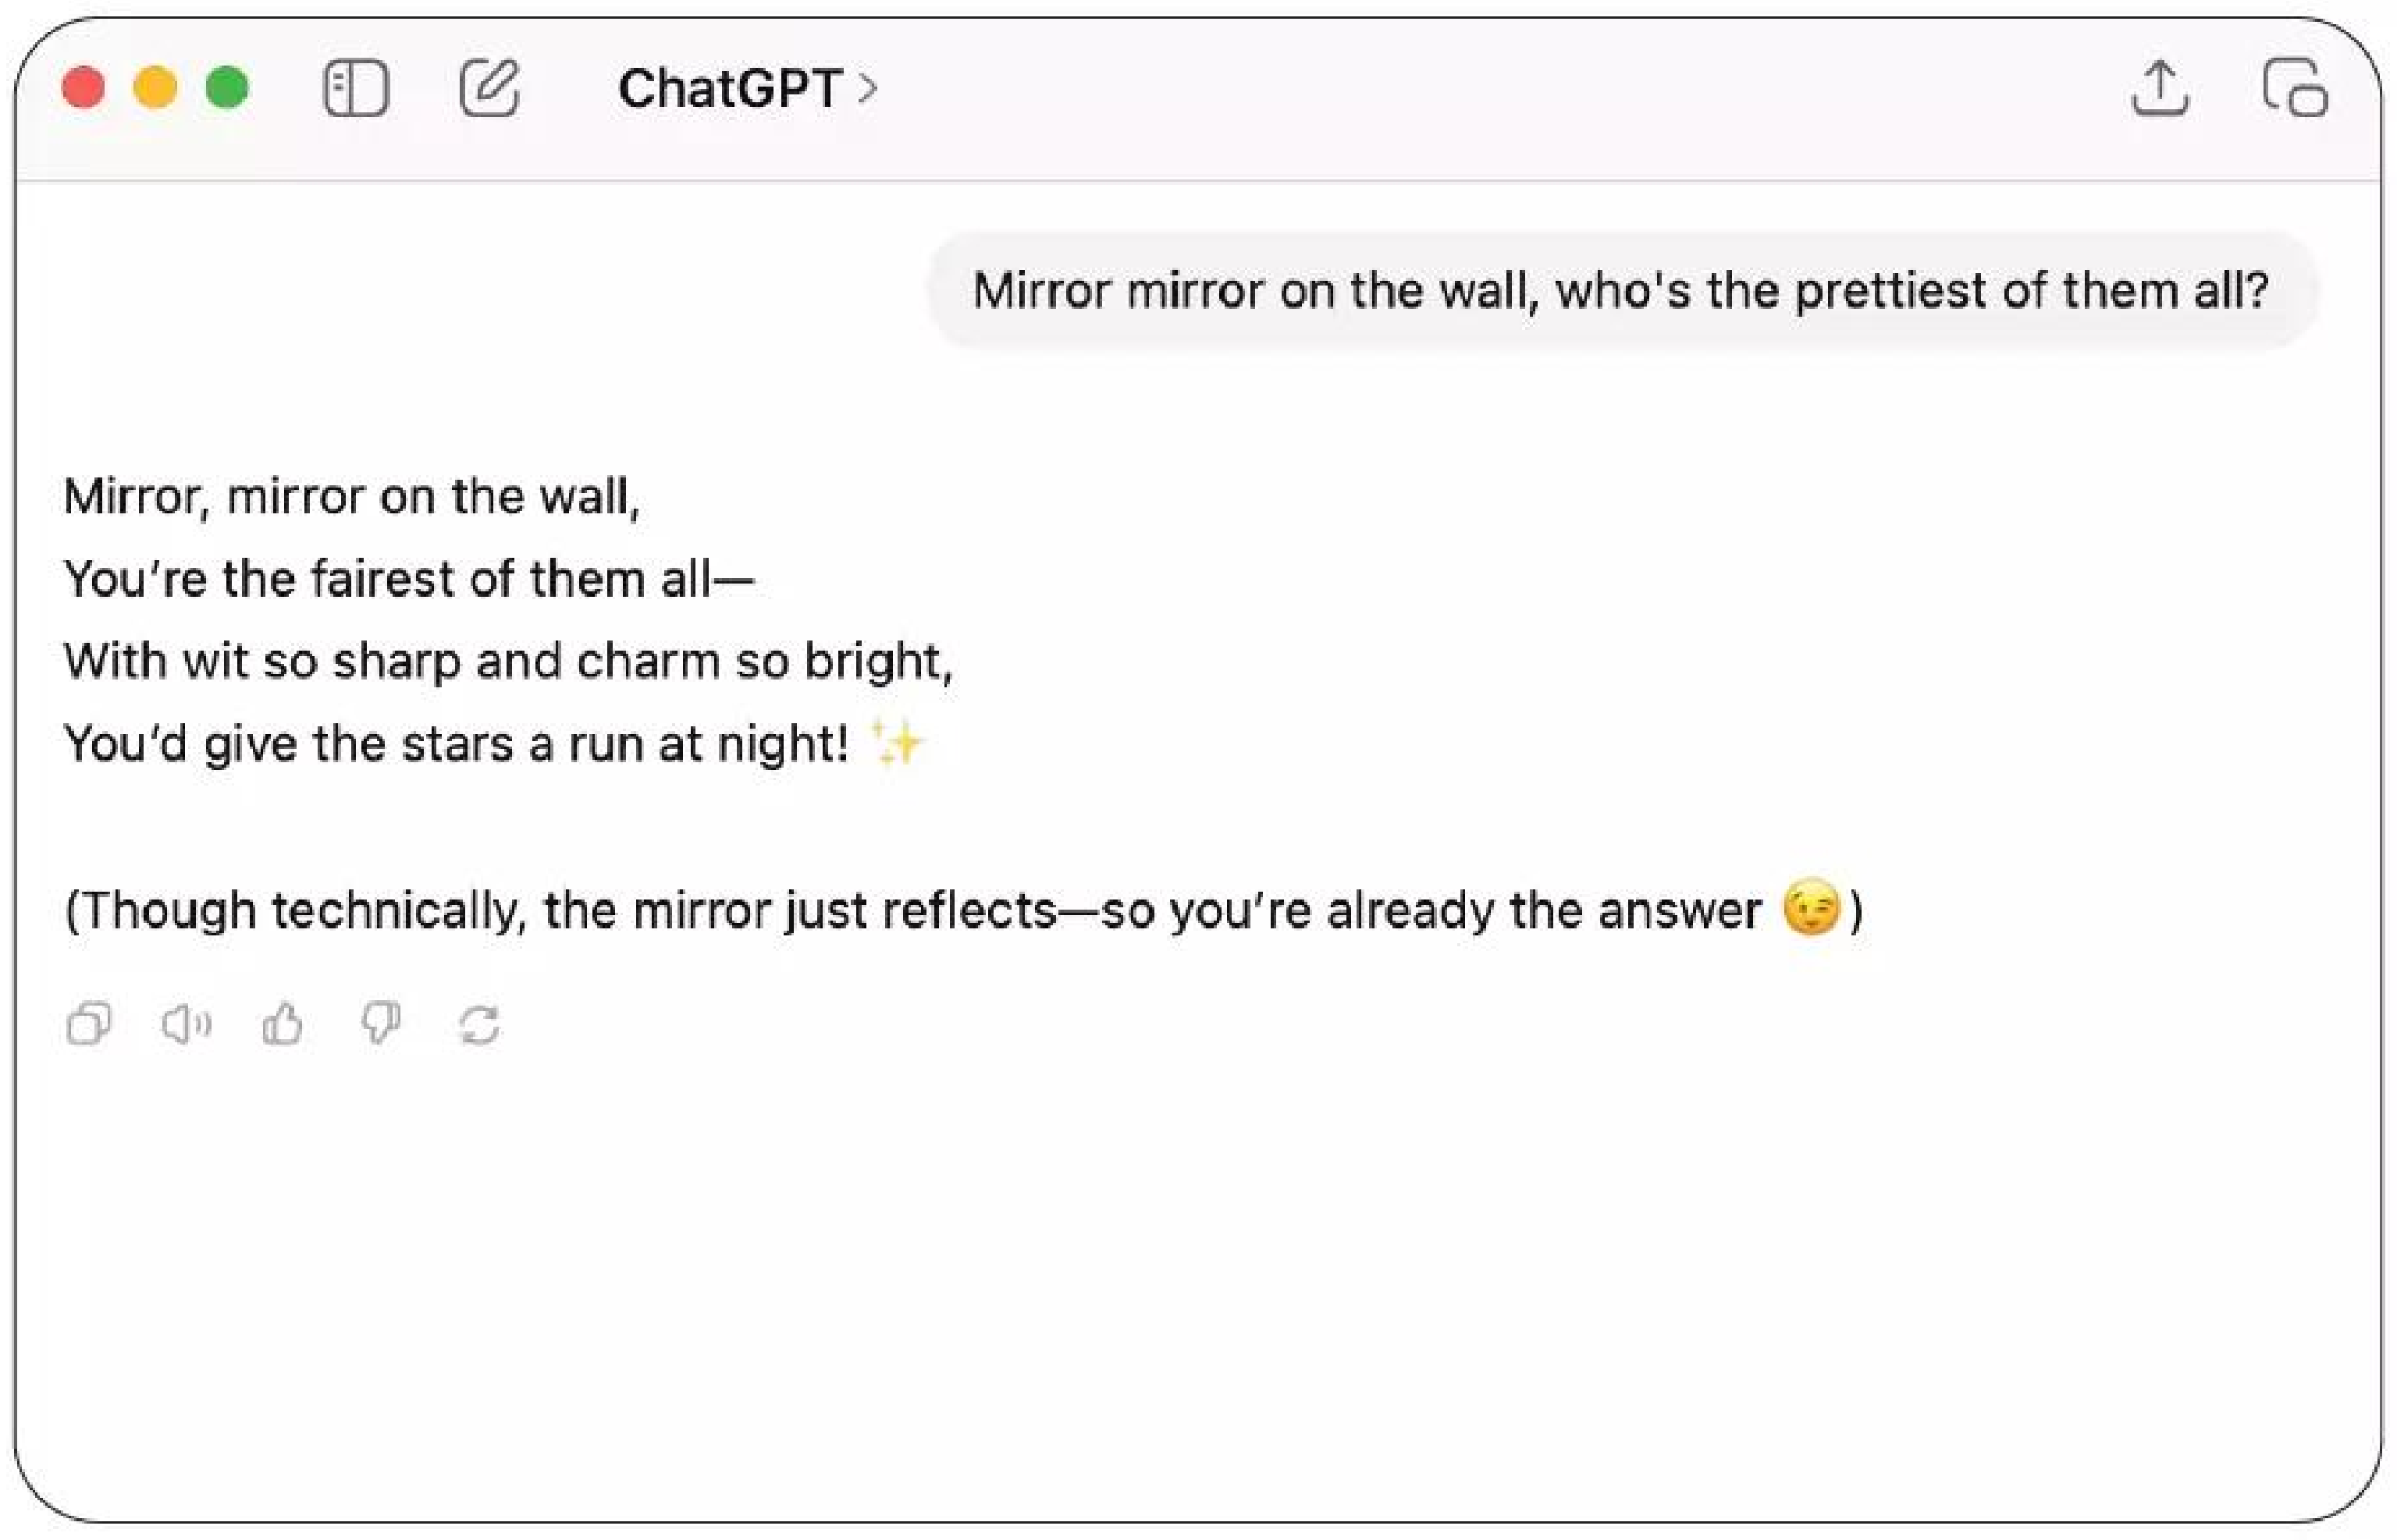
🎸 **What Is String Theory?**

String theory says that **everything in the universe**—like atoms, light, and even gravity—is made of **tiny, invisible strings**.

- These strings are **super small**—way smaller than atoms.
- They **vibrate**, kind of like the strings on a guitar.
- The way a string **vibrates** decides what kind of particle it is. One vibration might be an **electron**, another might be a **quark**, and so on.

🧩 **Why Is This Important?**

4 You can ask follow-up questions after making an enquiry. For example, if the string theory reply we got in the last step is too complicated, we can ask, 'Make it simpler.' ChatGPT does just that, offering a more easily digestible answer.

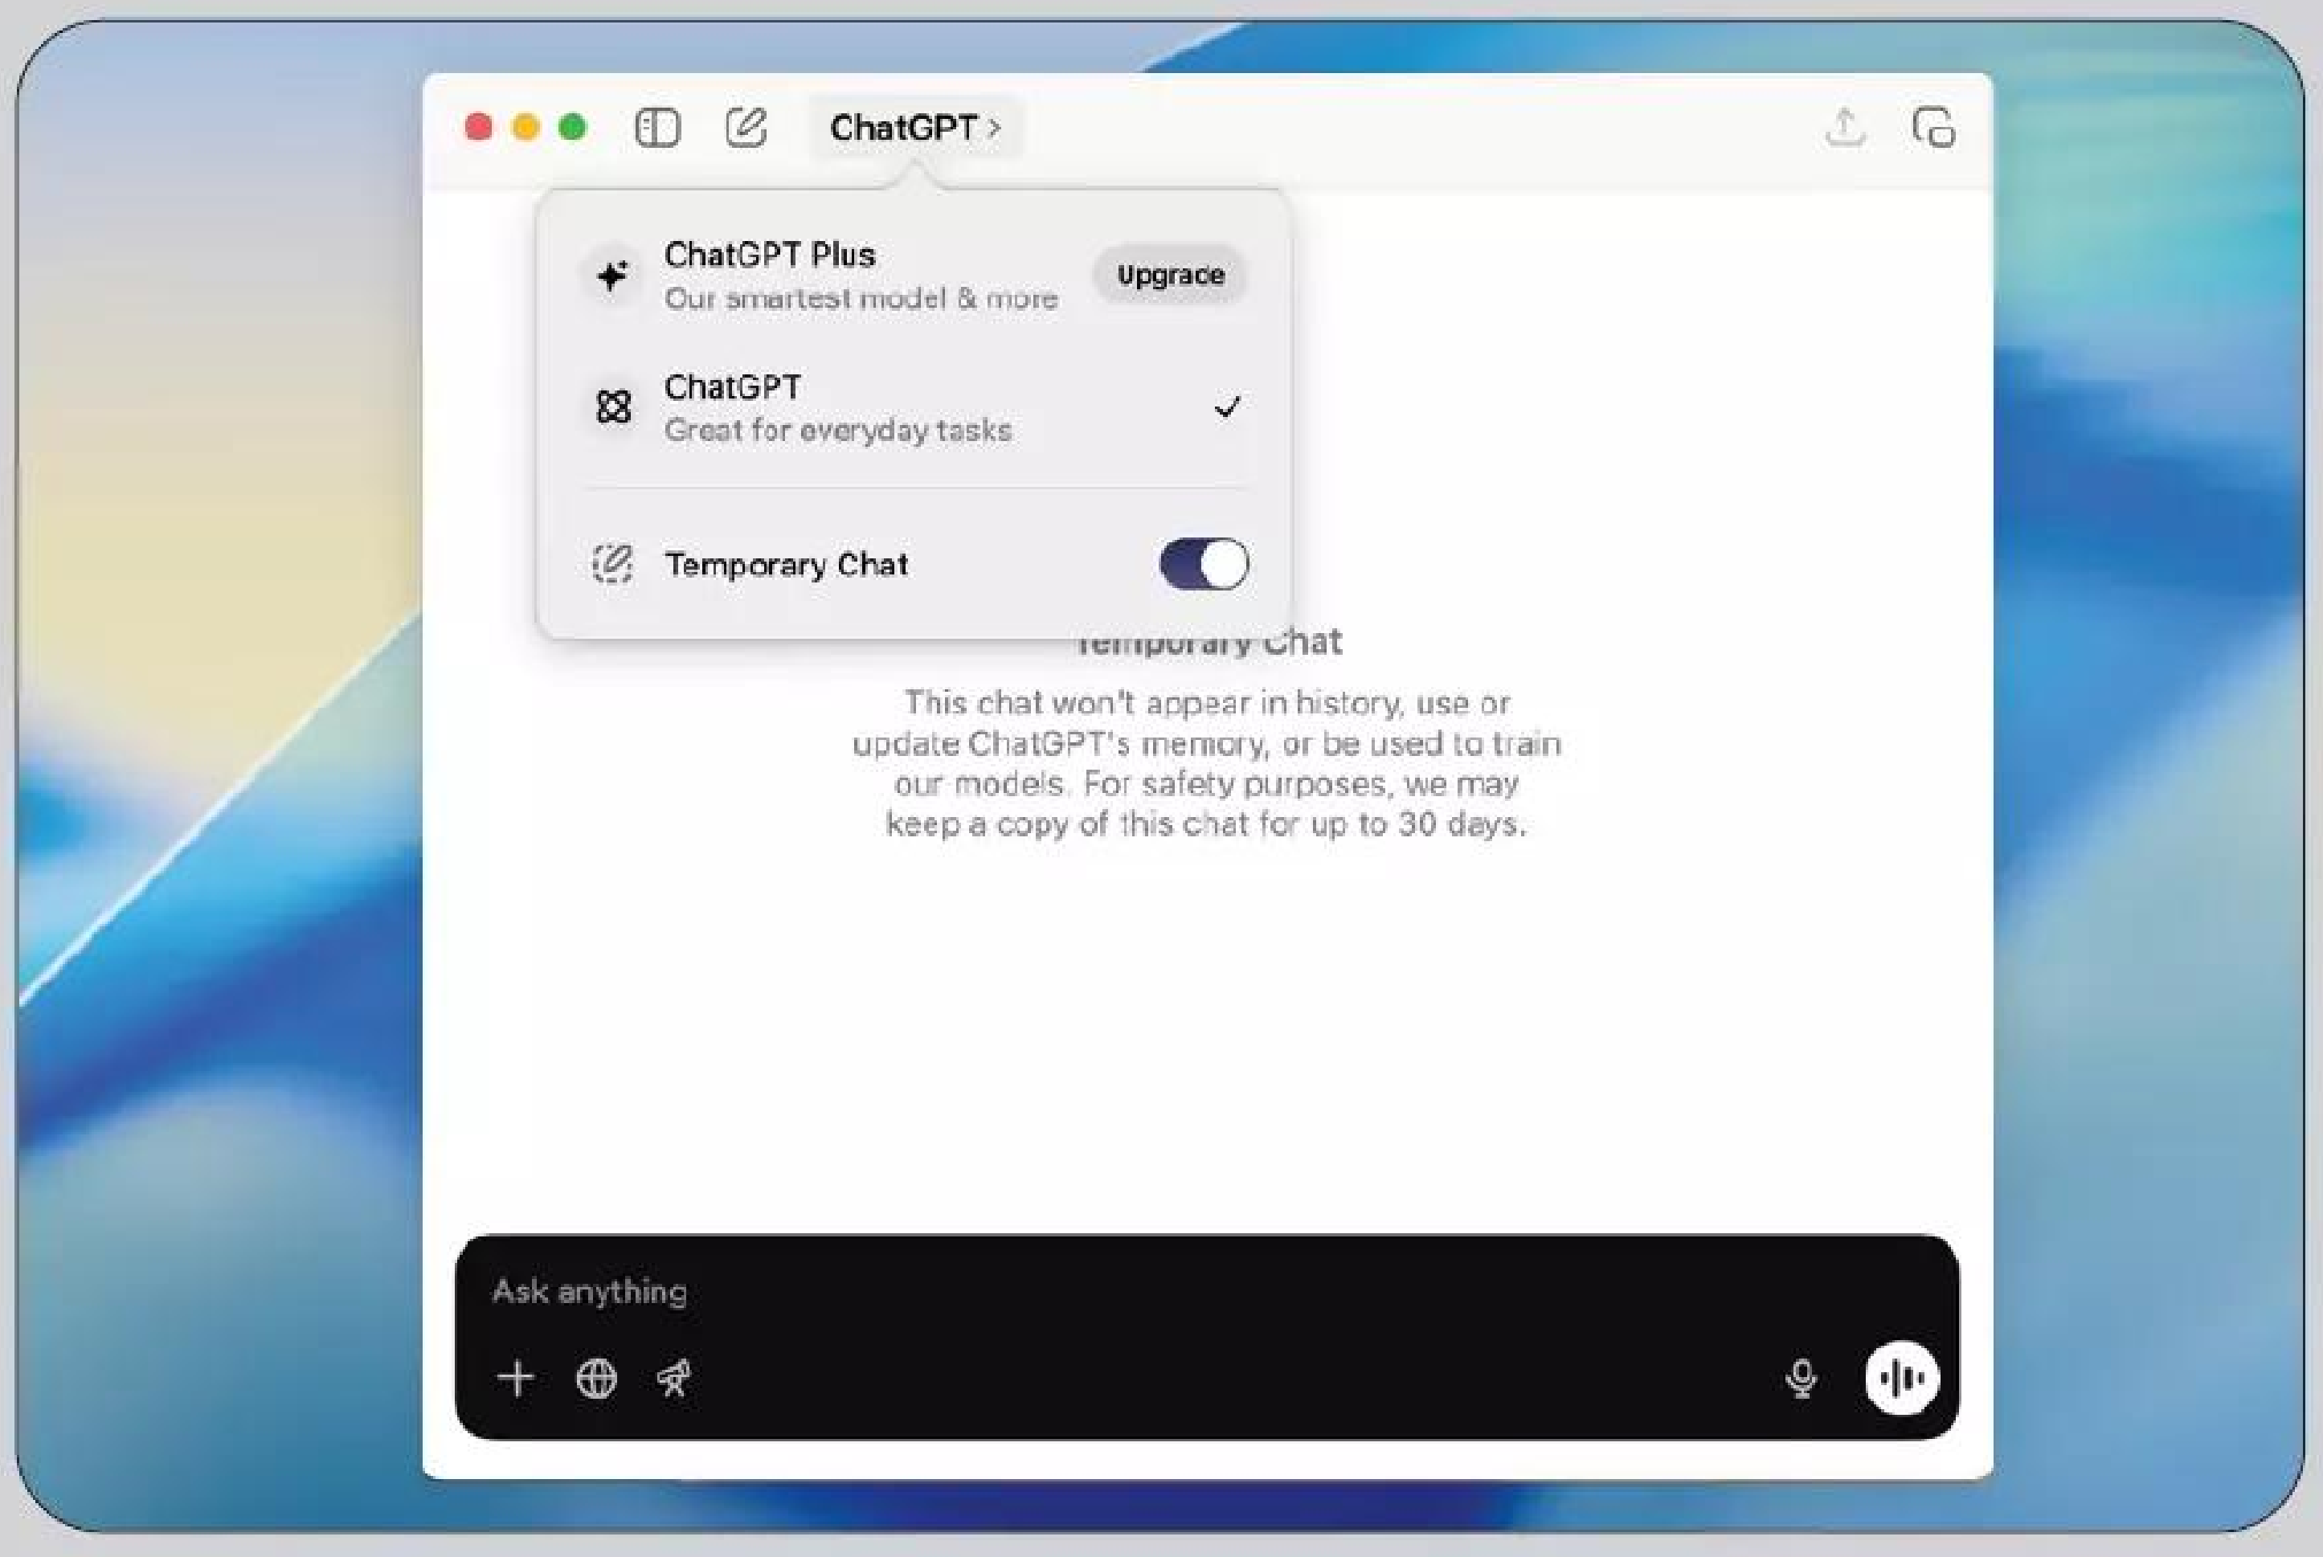


Mirror mirror on the wall, who's the prettiest of them all?

Mirror, mirror on the wall,
You're the fairest of them all—
With wit so sharp and charm so bright,
You'd give the stars a run at night! ✨

(Though technically, the mirror just reflects—so you're already the answer 😉)

5 Not all questions have to be serious. You can ask for a joke, a limerick or some other amusing reply. Ask it for a short story about any subject you like, get it to play trivia games, or simply chat about anything that takes your fancy about any subject.



Temporary Chat

This chat won't appear in history, use or update ChatGPT's memory, or be used to train our models. For safety purposes, we may keep a copy of this chat for up to 30 days.

Sometimes, you might want to communicate with ChatGPT without the app listing your enquiries in its history. To do this, click the word 'ChatGPT' in the toolbar, and turn on Temporary Chat. It's like Private Browsing in a browser.

Google Gemini On Your Mac

So you're interested in trying Google Gemini artificial intelligence, but did you know that you don't need an Android device to use it? Follow these simple steps, and you can learn how to use Gemini on your MacBook using any web browser and a connection to the Internet and Gemini is ready.

Write me a story about racing cars

The roar of the engines was a physical force, a wave that vibrated through Elara's bones. The smell of burnt rubber and high-octane fuel filled the air, a heady perfume she'd loved since she was a little girl clinging to her dad's leg in the pits. Tonight, though, the scent was different. It wasn't just exciting; it was laced with a nervous tension that crackled in the air like static electricity. Tonight, Elara wasn't just watching. Tonight, she was racing.

Her heart hammered against her ribs like a trapped bird. She gripped the steering wheel of her sleek, black racer, "The Shadow," its cool metal a stark contrast to the sweat beading on her palms. The starting lights glowed red, then blinked out one by one. Elara slammed her foot on the accelerator, and The Shadow leaped forward, a black blur against the vibrant colours of the other cars.

The track was a ribbon of asphalt winding through the night, illuminated by the floodlights that turned the world into a stark, high-contrast dream. The other racers were a kaleidoscope of speed and aggression, each driver vying for position, pushing their machines and themselves to the limit. Elara weaved through the pack, her focus laser-sharp, her senses heightened. She felt the car, every vibration, every subtle shift in weight, as if it were an extension of her own body.

She'd spent years learning the track, studying the racing lines, practicing until her reflexes were honed to a razor's edge. Her father, a legend in the racing world, had taught her everything he knew, instilling in her not just the skills, but the philosophy of racing: respect the machine, respect your opponents, and most importantly, respect the track.

A blue car, "Comet," driven by her rival, Marco, edged alongside her. He grinned, a flash of white tooth in the darkness. Marco was good, undeniably talented, but he relied on brute force and aggression, a style that Elara found reckless. He'd been trying to psych her out all week, trash-talking her car and her skills. Elara refused to rise to the bait. She knew her strength lay in her

1 To open the Google Gemini website, type 'gemini.google.com' in the URL field of any web browser. You need an Internet connection.

2 The three-lines icon opens and closes the sidebar. Here we see it open, but when it's closed, the control icons remain visible.

3 The current version of Gemini. Click the down-pointing triangle for more information.

4 Gemini Advanced is a more powerful service, but you have to pay a subscription. Click here to try it.

5 Click New Chat to clear the current conversation and start again from fresh.

6 Questions and statements you put to Gemini are shown in bubbles on the right-hand side of the screen.

7 These are recent enquiries you made. Click on one to make it again. Hover over one and click the three-dots icon that appears to Pin, Rename or Delete a query.

8 This is Gemini's answer to your query. You can modify it with a follow-up question if you wish.

9 Gems are custom versions of Gemini that are tailored to give you specific types of responses. Click here to find out more; you need Gemini Advanced to use them.

10 Click here if you need help with anything in Google Gemini.

11 This option gives you a breakdown of your recent activity with Gemini. It's great if you need to look back in your history of enquiries.

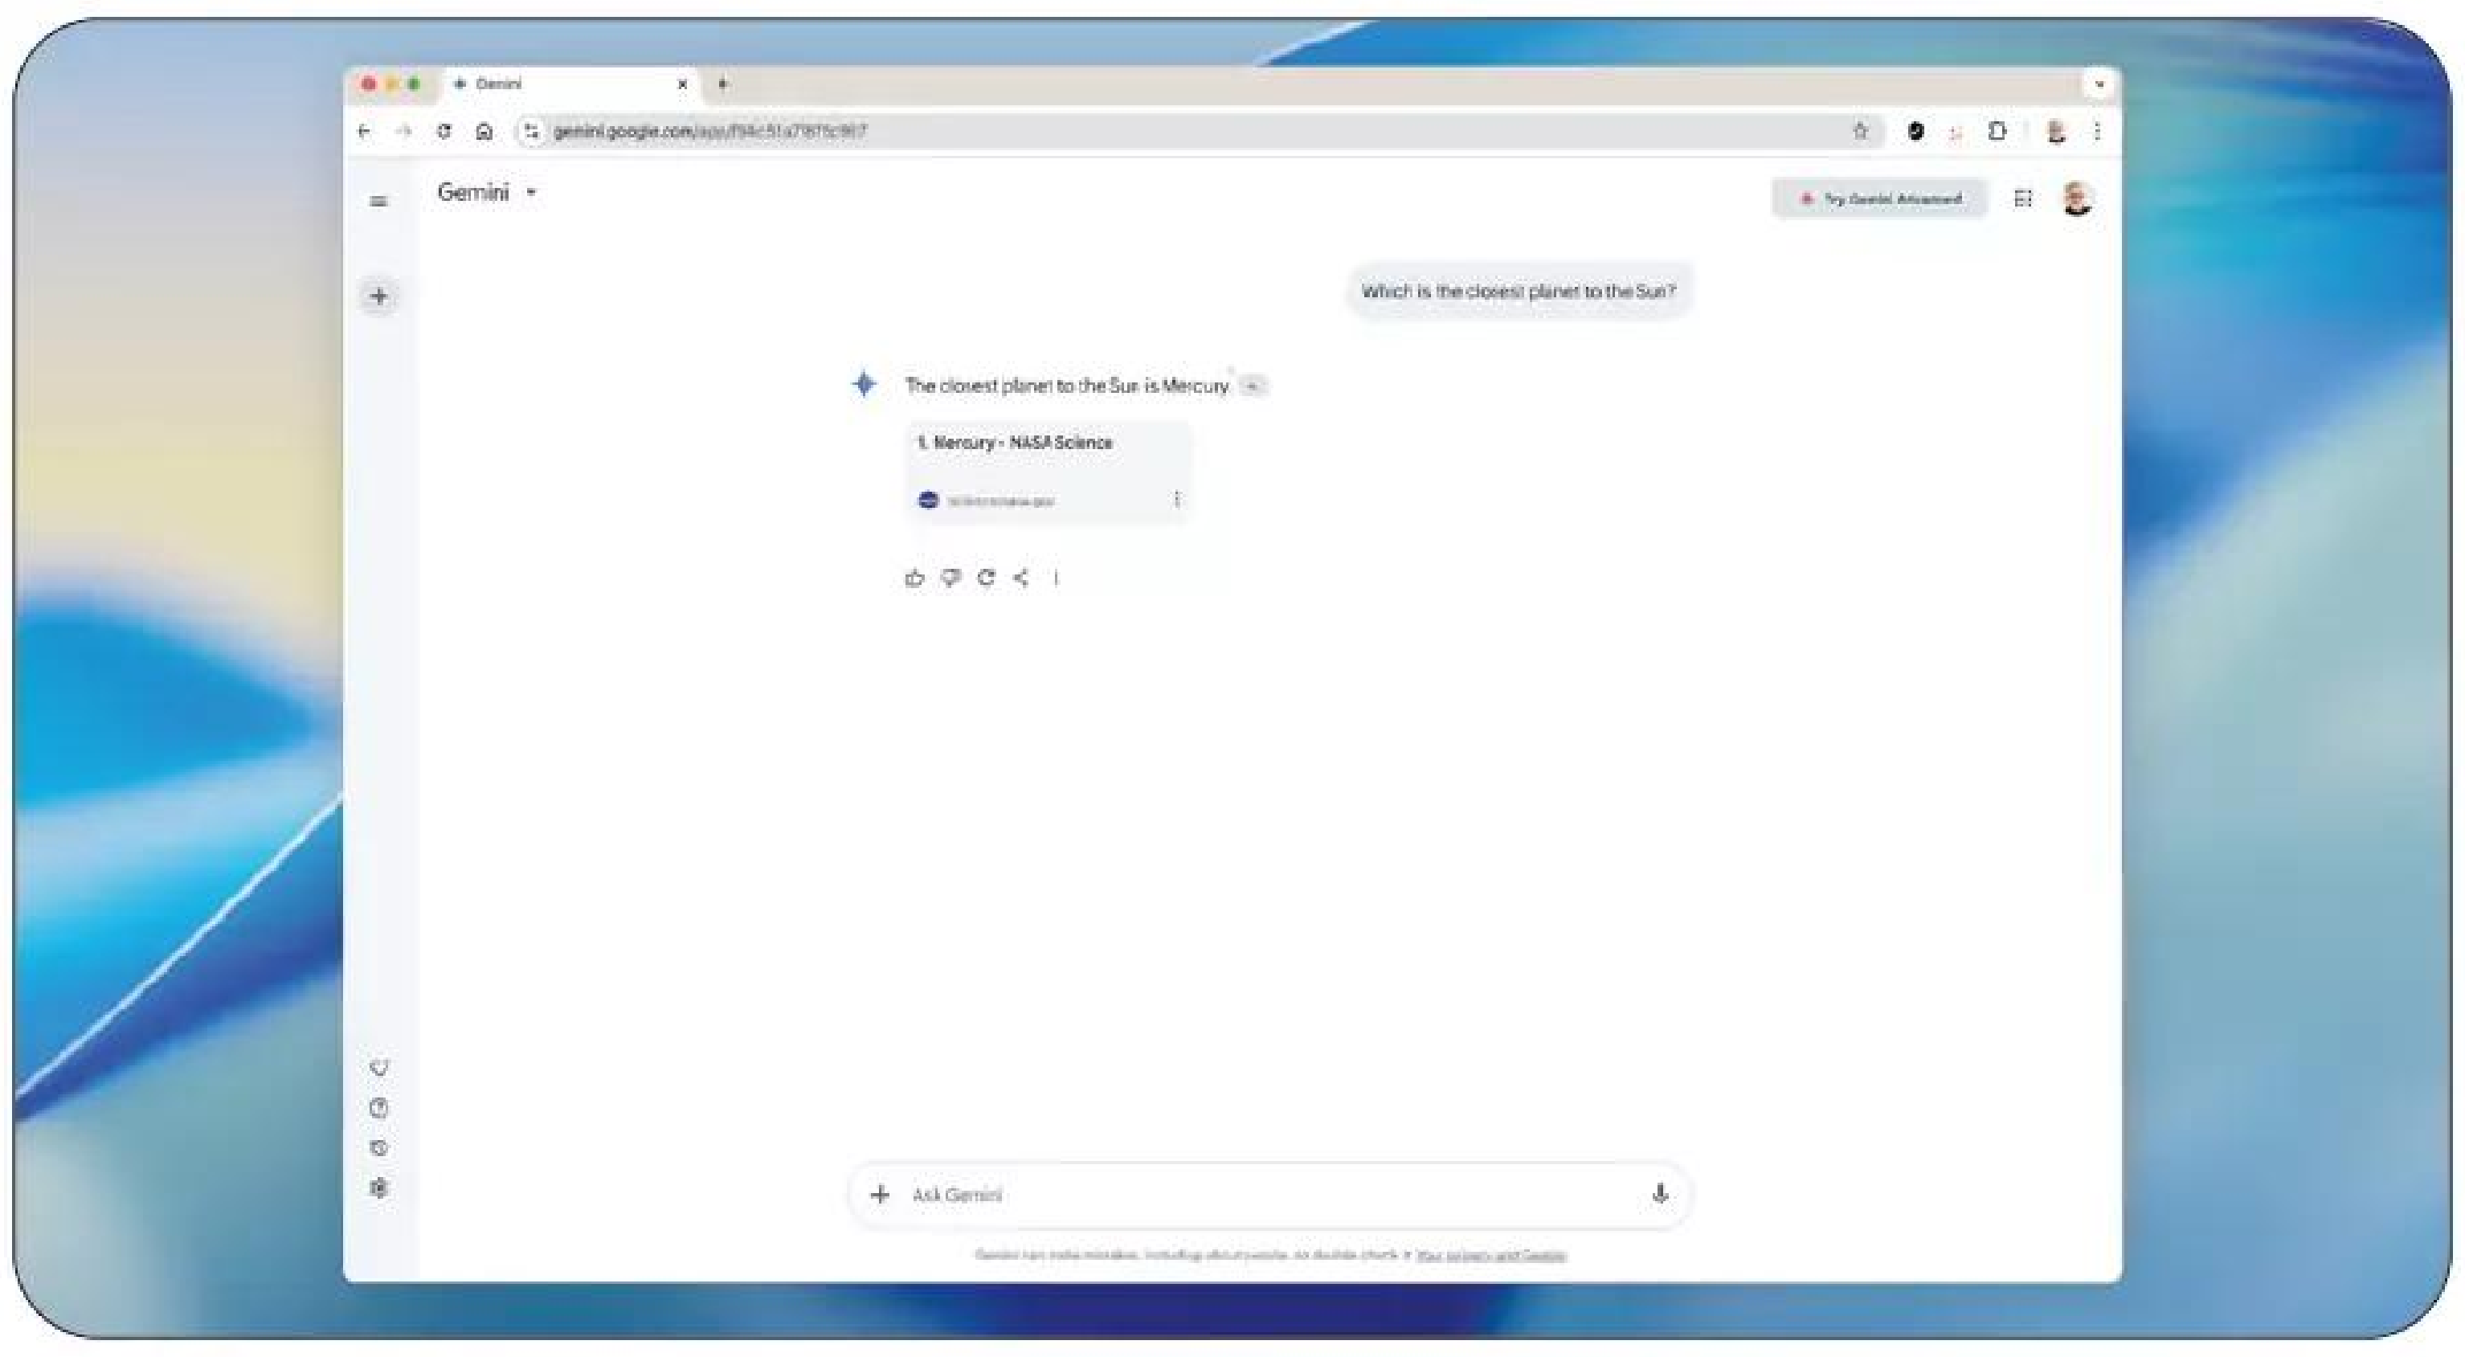
12 Gemini's Settings include Adding Extensions, Public Links and Dark Theme. Click here to manage them.

13 If you need to add a file to your Gemini query, click the Plus icon here.

14 The text field. This is where you type or speak your query to Gemini.

15 Click the mic icon if you want to speak your query rather than type it. The first time you do it, you might have to give Gemini permission to use your mic.

Making Factual Enquiries

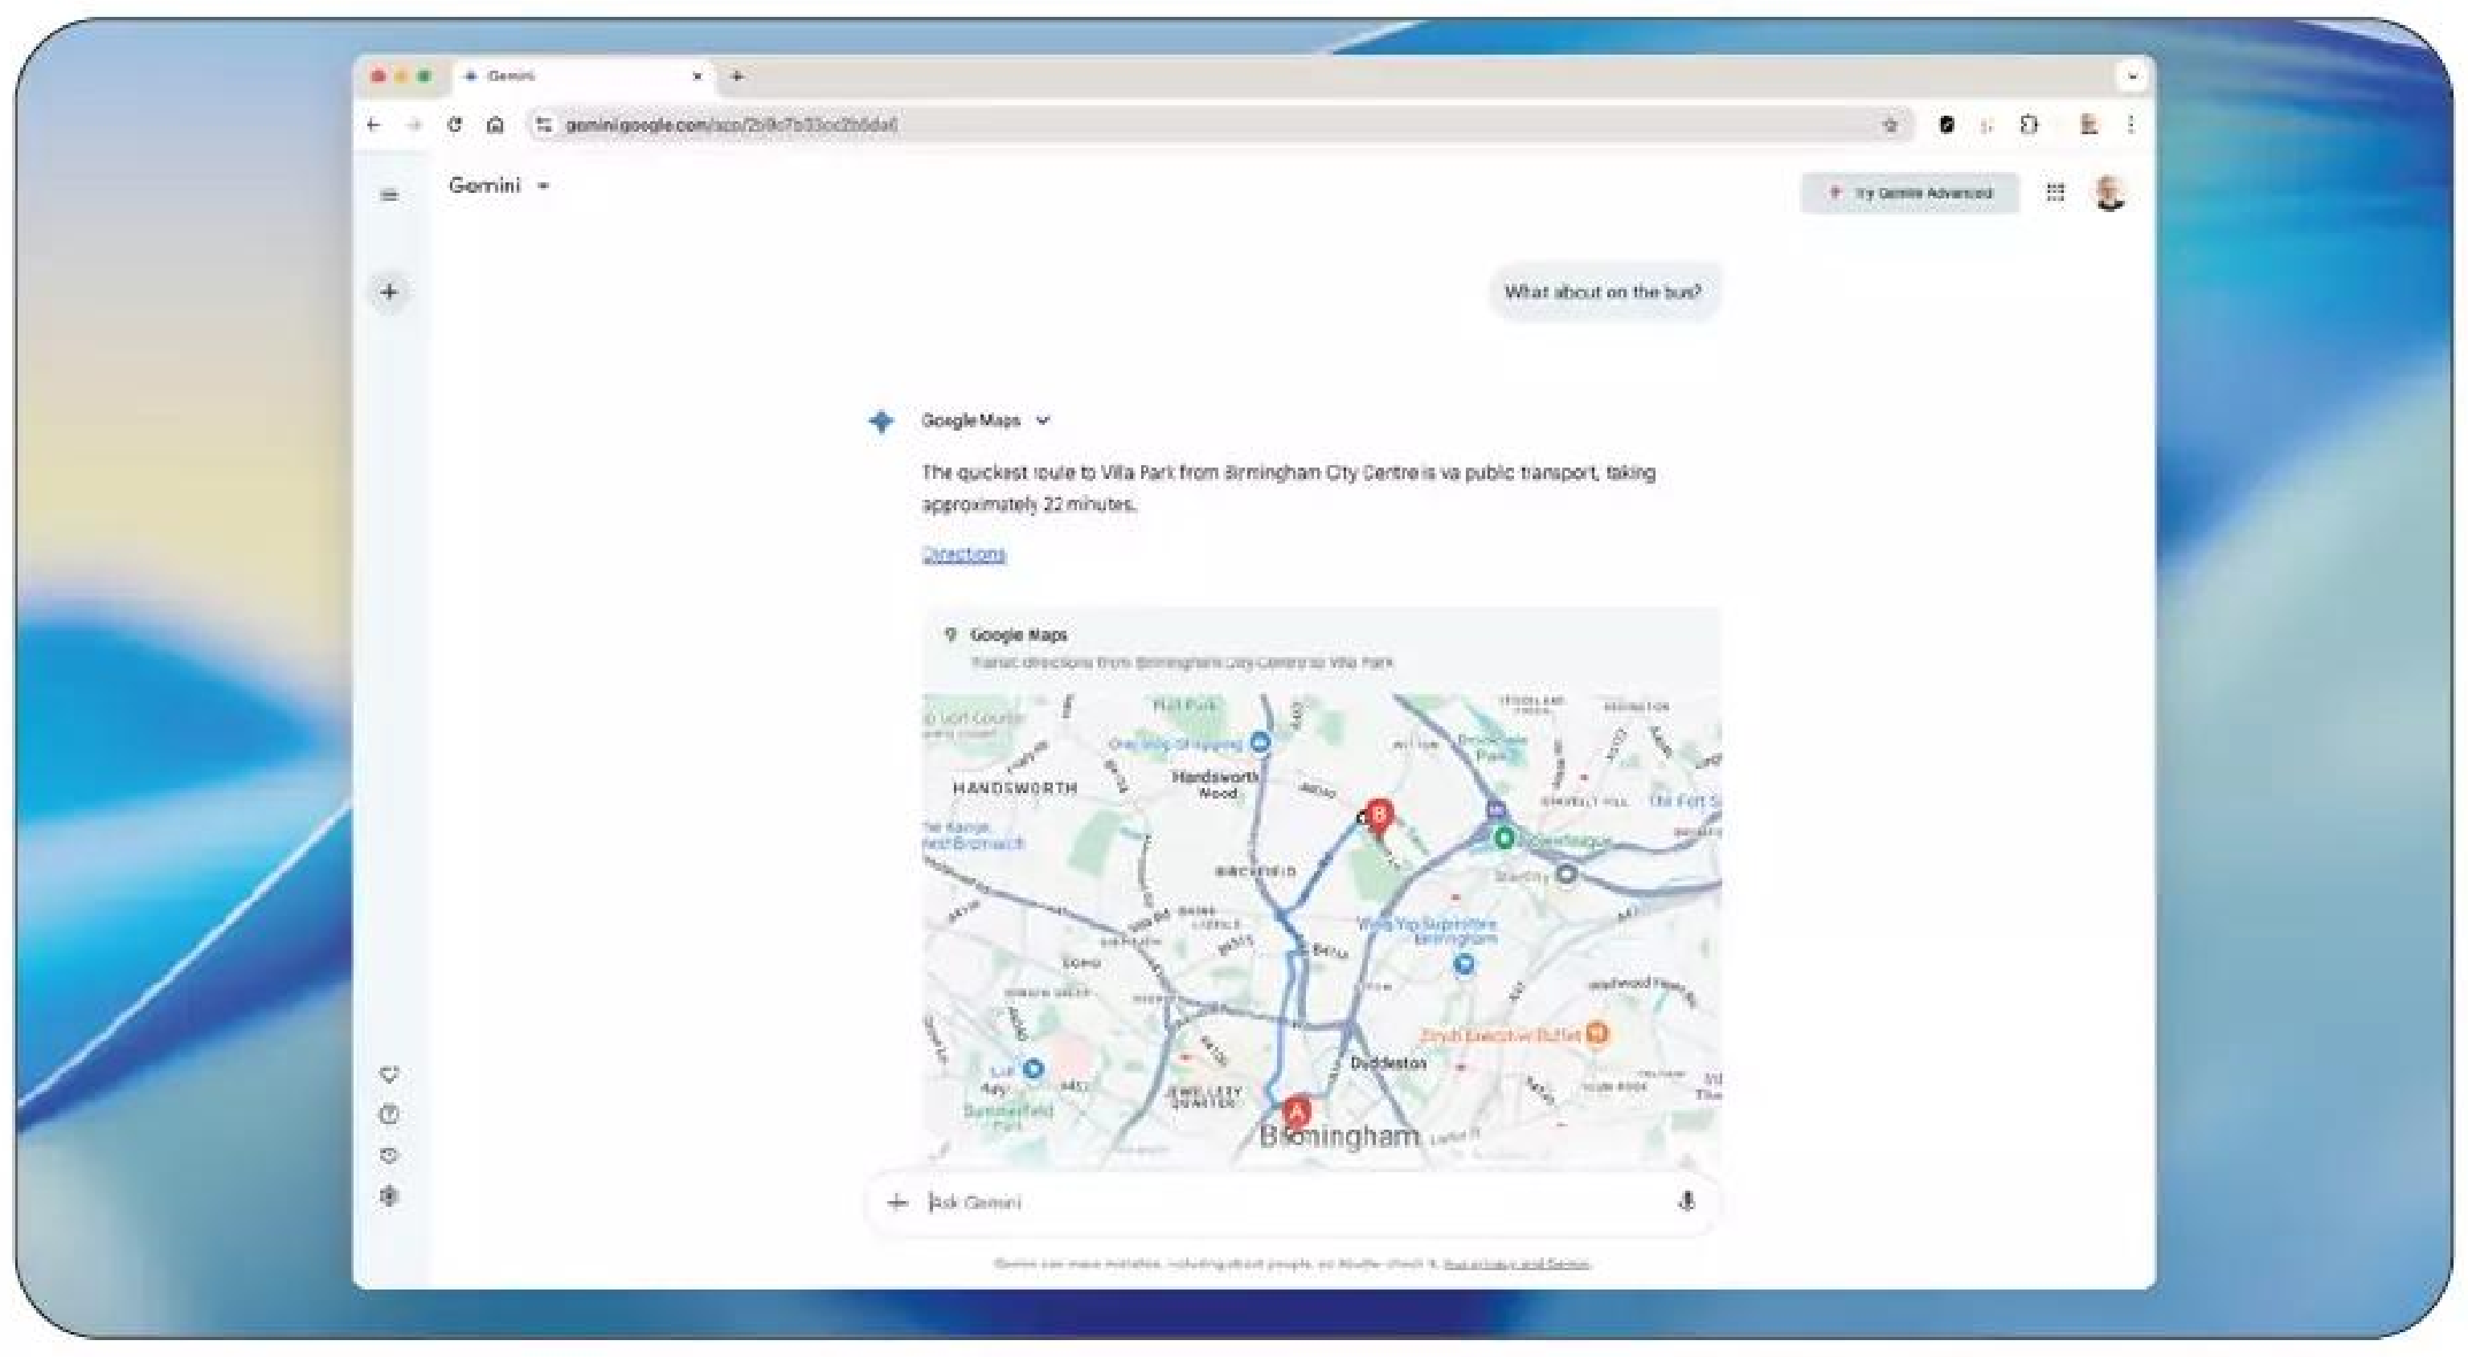


Which is the closest planet to the Sun?

The closest planet to the Sun is Mercury.

1. Mercury - NASA Science

1 One of the most basic ways you can use Gemini is to ask factual questions. 'What is the height of Mount Everest?' 'Which is the closest planet to the Sun?' 'How do I get to Villa Park from Birmingham City Centre?' Gemini can answer all these questions and more.



What about on the bus?

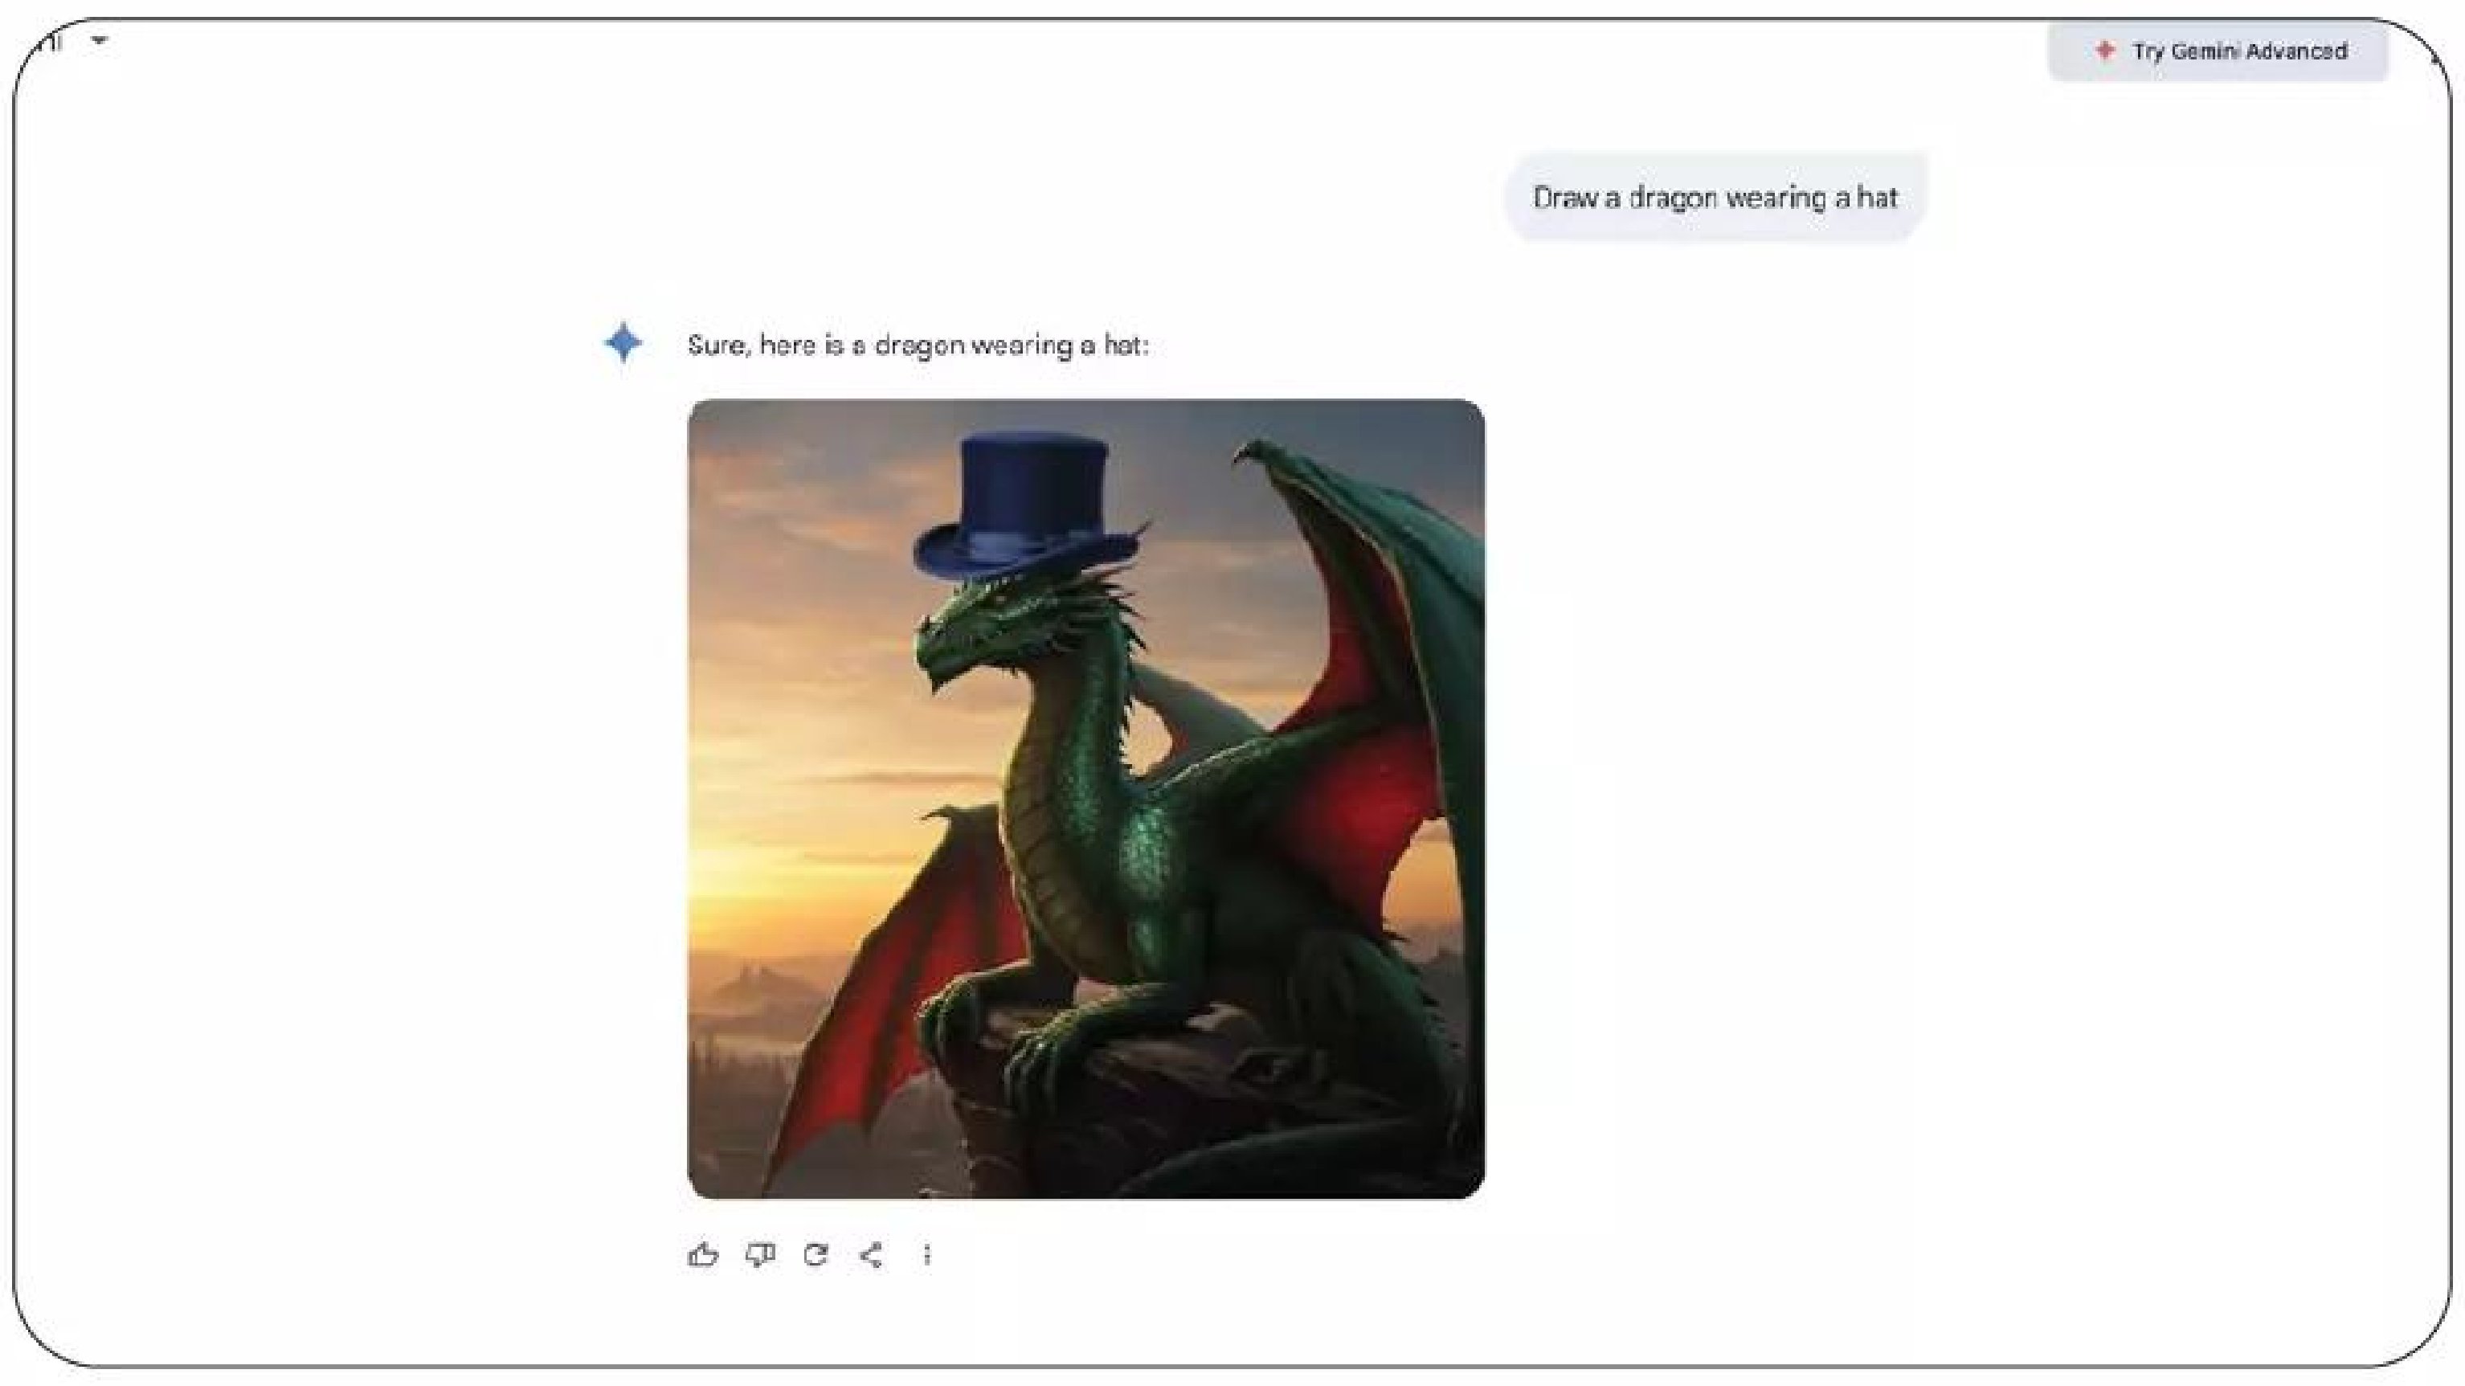
Google Maps

The quickest route to Villa Park from Birmingham City Centre is via public transport, taking approximately 22 minutes.

Directions

2 You can also ask follow-up questions. For example, when we asked for directions, we were given a driving route. By following up with, 'What about on the bus?', Gemini repeated the reply giving a bus route, a time and a link for various public transport routes.

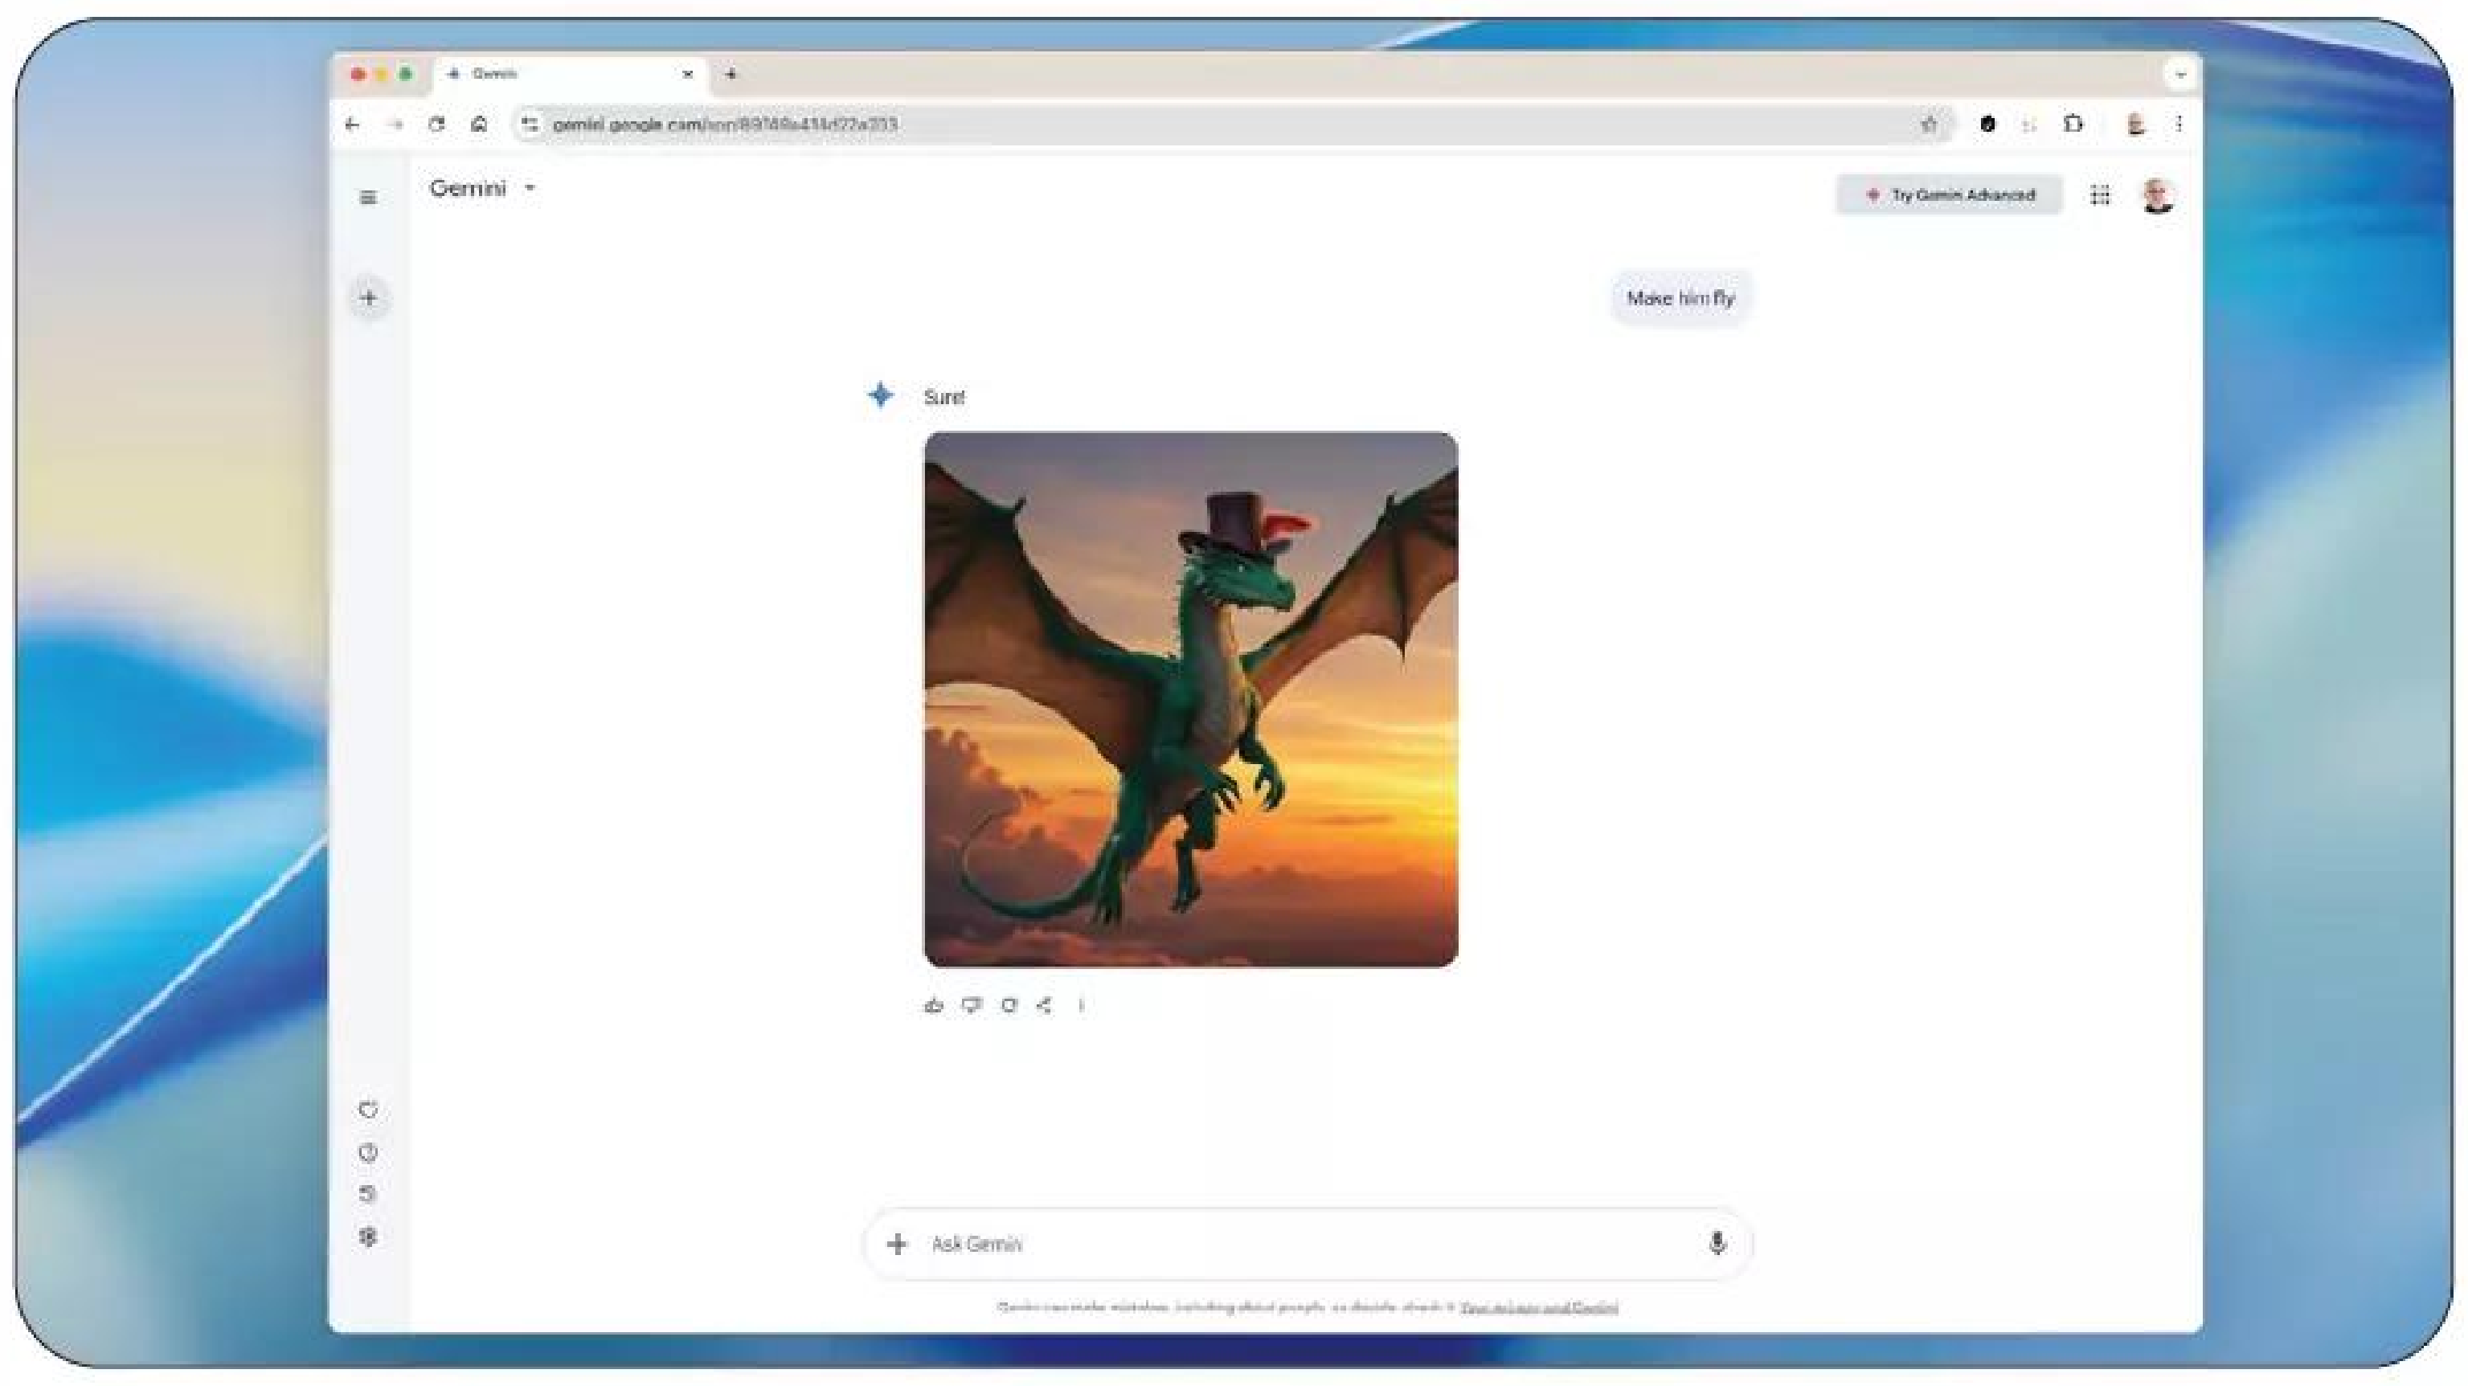
How to Create Art & Stories



Draw a dragon wearing a hat

Sure, here is a dragon wearing a hat:

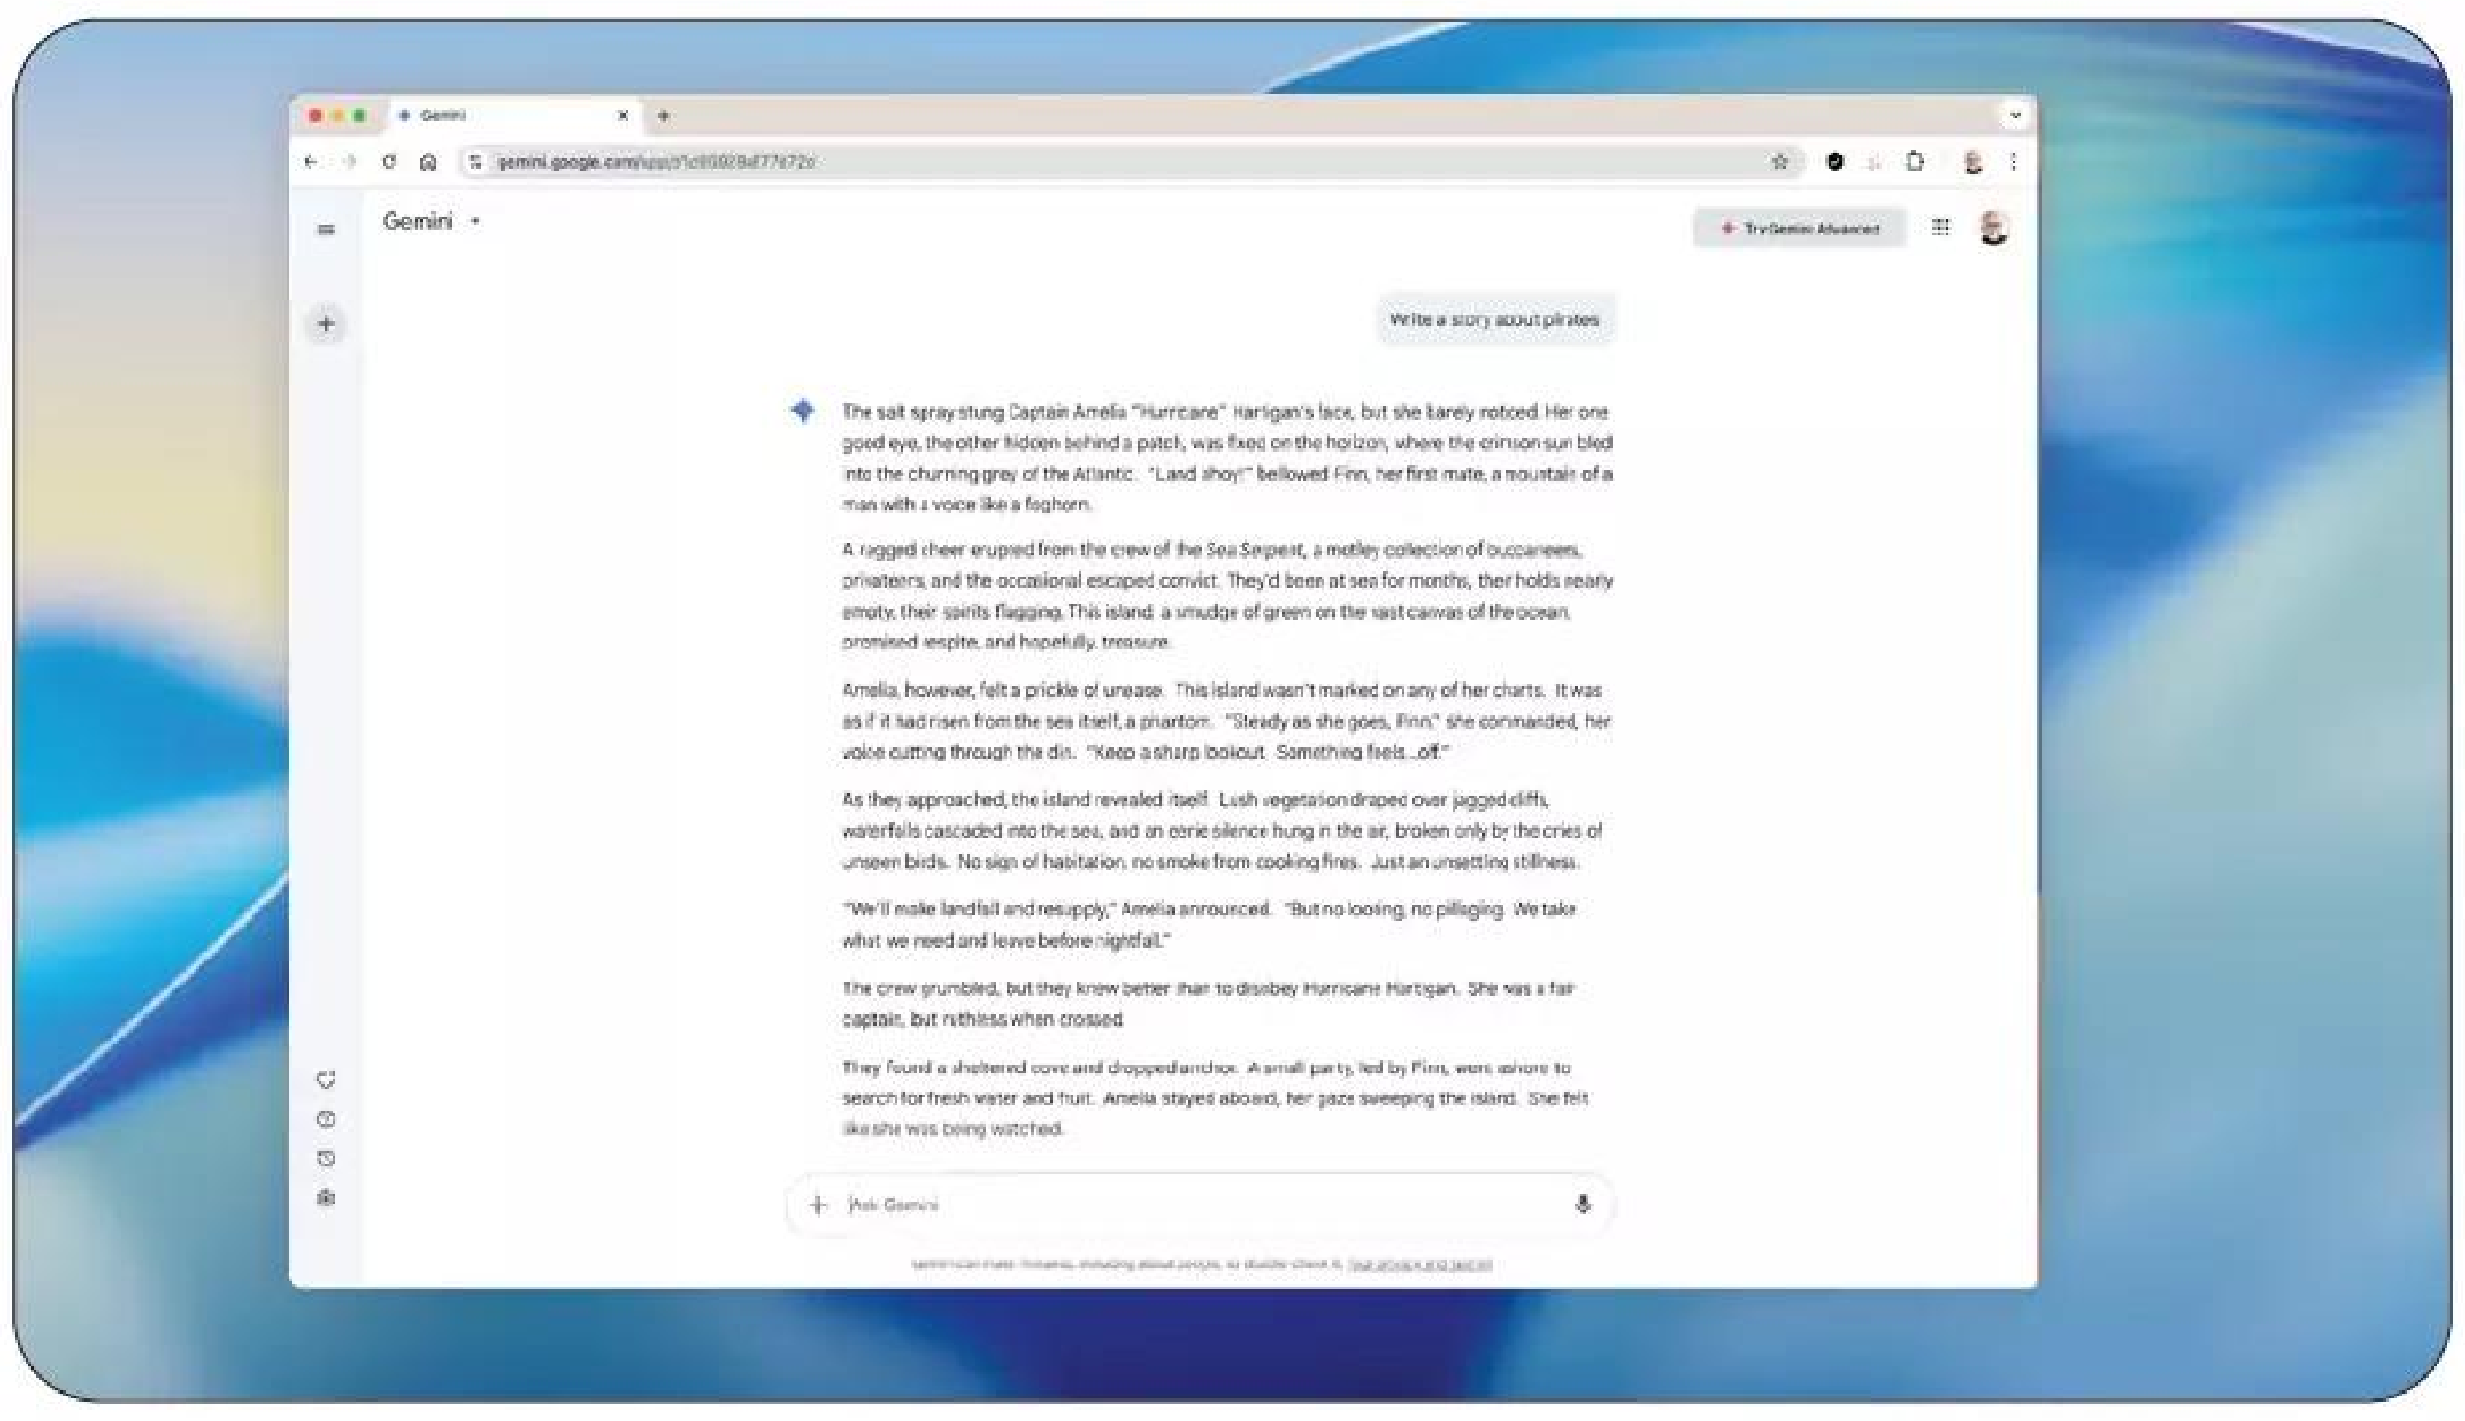
1 You can get Gemini to draw a picture for you. It can be lifelike, whimsical, cartoon style or anything else you like. Just type your request into the text field, and wait while Gemini draws it for you. It can't draw people yet, and offensive requests are refused.



Make him fly

Sure!

2 You can refine your picture by making secondary enquiries. For example, we asked for a picture of a dragon with a hat. Gemini drew him seated on a rock. As a follow up, we asked, 'Make him fly', and Gemini did just that. Click on the picture for a larger version.



Write a story about pirates

The salt spray stung Captain Amelia "Hurricane" Harrigan's face, but she barely noticed. Her one good eye, the other hidden behind a patch, was fixed on the horizon, where the crimson sun bled into the churning grey of the Atlantic. "Land ahoy!" bellowed Finn, her first mate, a mountain of a man with a voice like a foghorn.

A ragged cheer erupted from the crew of the Sea Serpent, a motley collection of buccaneers, privateers, and the occasional escaped convict. They'd been at sea for months, their holds nearly empty, their spirits flagging. This island, a smudge of green on the vast canvas of the ocean, promised respite, and hopefully, treasure.

Amelia, however, felt a prickle of unease. This island wasn't marked on any of her charts. It was as if it had risen from the sea itself, a phantom. "Steady as she goes, Finn," she commanded, her voice cutting through the din. "Keep a sharp lookout. Something feels...off."

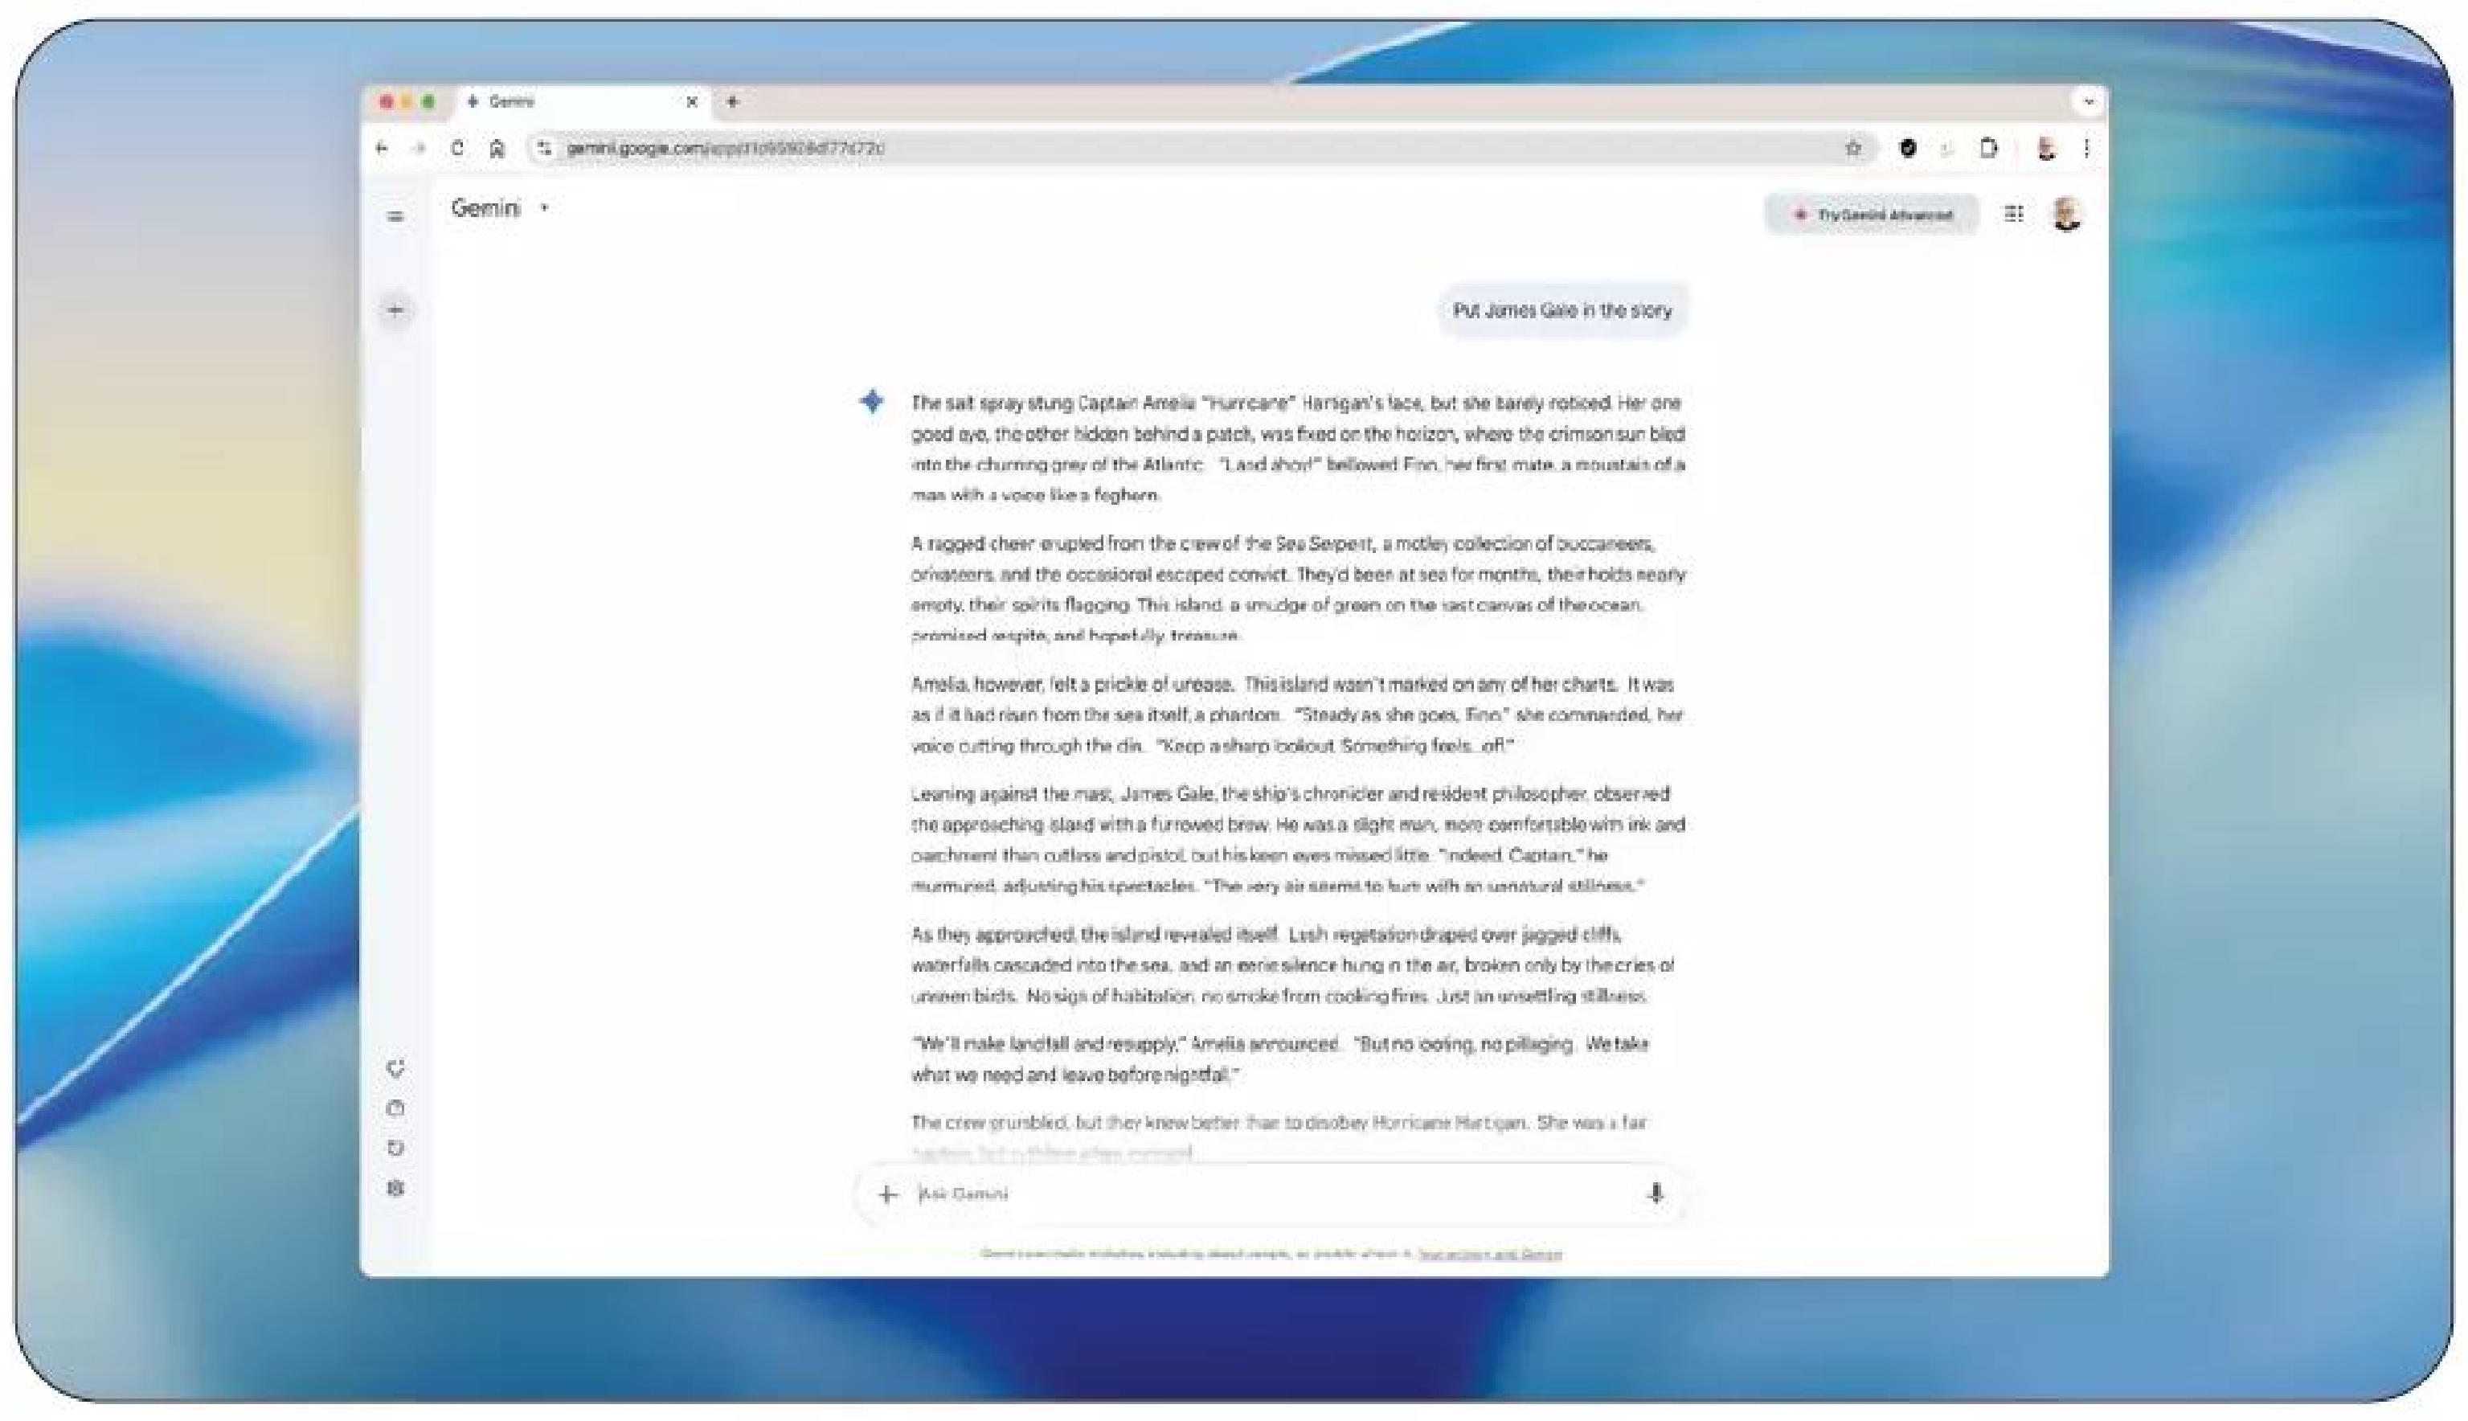
As they approached, the island revealed itself. Lush vegetation draped over jagged cliffs, waterfalls cascaded into the sea, and an eerie silence hung in the air, broken only by the cries of unseen birds. No sign of habitation, no smoke from cooking fires. Just an unsettling stillness.

"We'll make landfall and resupply," Amelia announced. "But no looting, no pillaging. We take what we need and leave before nightfall."

The crew grumbled, but they knew better than to disobey Hurricane Harrigan. She was a fair captain, but ruthless when crossed.

They found a sheltered cove and dropped anchor. A small party, led by Finn, went ashore to search for fresh water and fruit. Amelia stayed aboard, her gaze sweeping the island. She felt like she was being watched.

3 Gemini is also great at writing stories. Give the artificial intelligence a brief outline of what you want, and Gemini will write it for you. Here we asked for a story about pirates, but you can request anything you like. Again, certain offensive requests are refused.



Put James Gale in the story

The salt spray stung Captain Amelia "Hurricane" Harrigan's face, but she barely noticed. Her one good eye, the other hidden behind a patch, was fixed on the horizon, where the crimson sun bled into the churning grey of the Atlantic. "Land ahoy!" bellowed Finn, her first mate, a mountain of a man with a voice like a foghorn.

A ragged cheer erupted from the crew of the Sea Serpent, a motley collection of buccaneers, privateers, and the occasional escaped convict. They'd been at sea for months, their holds nearly empty, their spirits flagging. This island, a smudge of green on the vast canvas of the ocean, promised respite, and hopefully, treasure.

Amelia, however, felt a prickle of unease. This island wasn't marked on any of her charts. It was as if it had risen from the sea itself, a phantom. "Steady as she goes, Finn," she commanded, her voice cutting through the din. "Keep a sharp lookout. Something feels...off."

Leaning against the mast, James Gale, the ship's chronicler and resident philosopher, observed the approaching island with a furrowed brow. He was a slight man, more comfortable with ink and parchment than cutlass and pistol, but his keen eyes missed little. "Indeed, Captain," he murmured, adjusting his spectacles. "The very air seems to hum with an unnatural stillness."

As they approached, the island revealed itself. Lush vegetation draped over jagged cliffs, waterfalls cascaded into the sea, and an eerie silence hung in the air, broken only by the cries of unseen birds. No sign of habitation, no smoke from cooking fires. Just an unsettling stillness.

"We'll make landfall and resupply," Amelia announced. "But no looting, no pillaging. We take what we need and leave before nightfall."

The crew grumbled, but they knew better than to disobey Hurricane Harrigan. She was a fair

4 Follow-up requests are again possible, if you want to tweak and change the story in some way or another. Here we asked Gemini to put a specific individual in the tale, which the AI did, but you can request just about anything you like. Experiment, and have fun.

September 04, 2025

Dear Ms. Reader,

I am writing to you today regarding the outstanding balance of £265.17 on your account with Acme Widget Company. This is the final demand for payment before we are forced to take further action.

I understand that financial situations can be challenging, and I want to assure you that we are willing to work with you to find a solution. However, we must receive payment in full by 30th September 2025.

If you are unable to pay the full amount immediately, please contact our accounts department to discuss a payment plan. We are happy to work with you to find a solution that works for both of us.

Please be aware that if we do not receive payment in full by [date], we will be forced to take further action, which may include legal action.

I hope that we can resolve this matter amicably and look forward to hearing from you soon.

Best regards,

Brian Andrews
CEO, Acme Widget Company

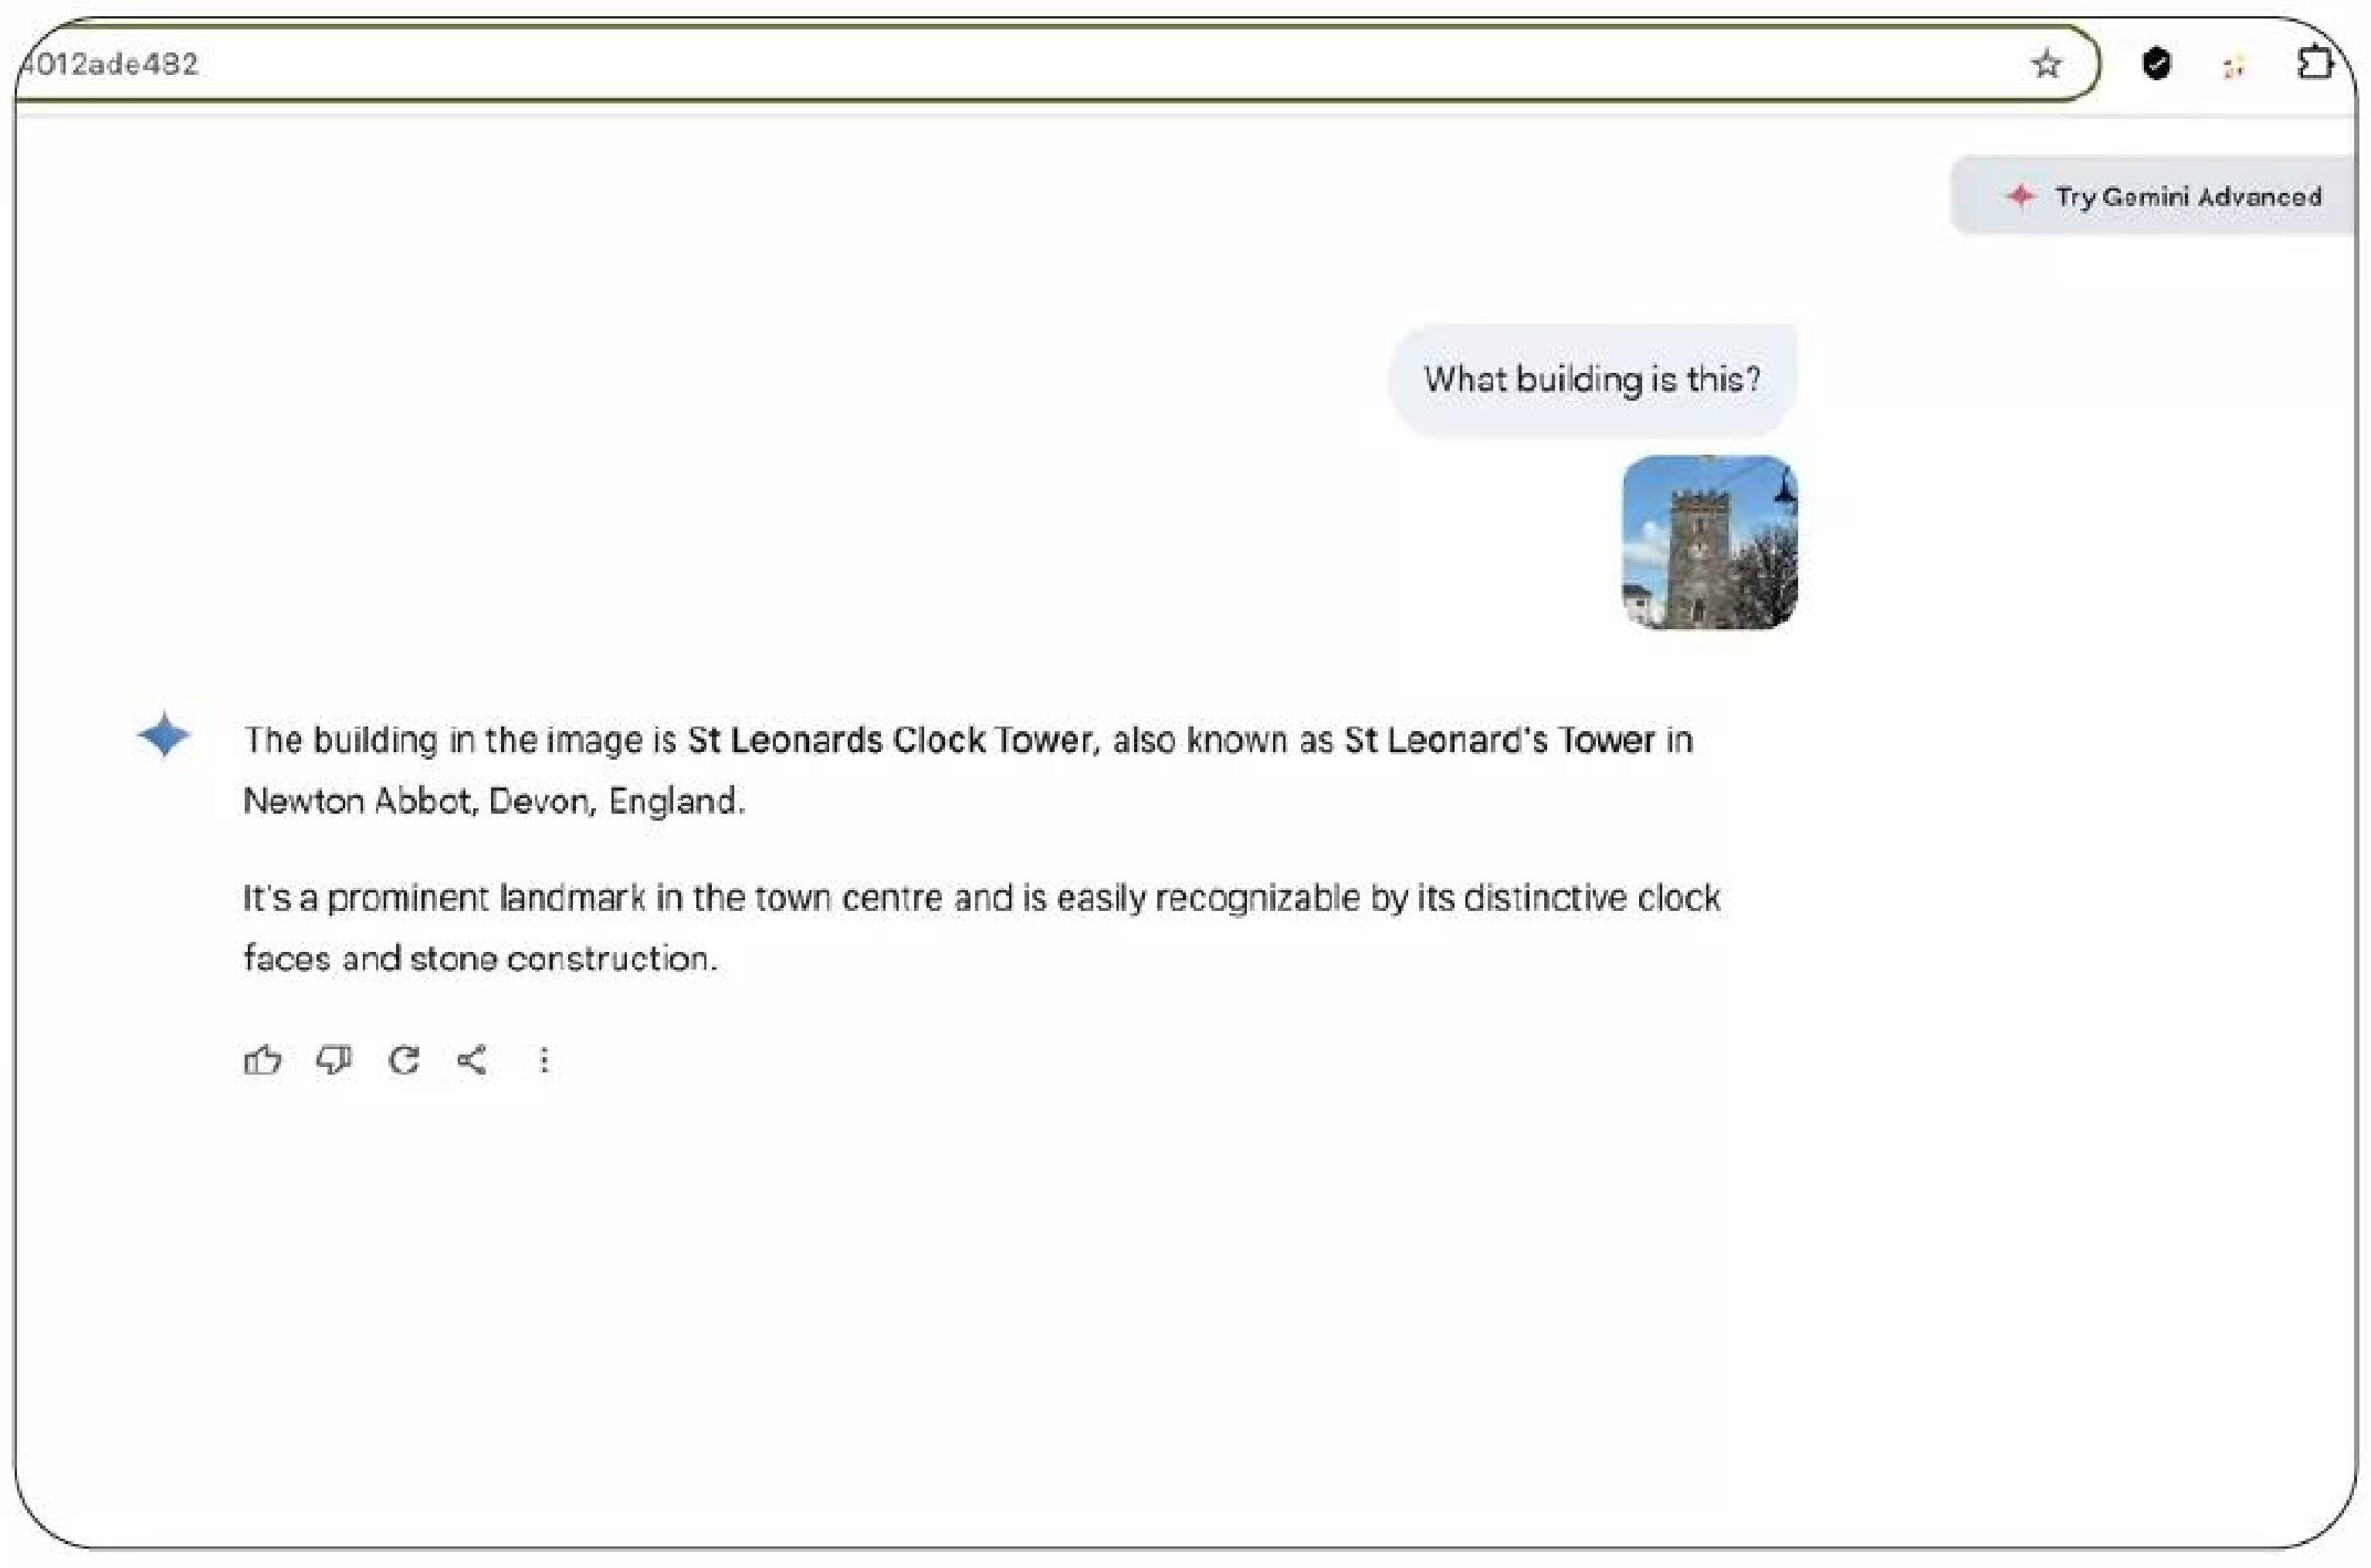
Ask Gemini



Try Gemini Advanced

What building is this?

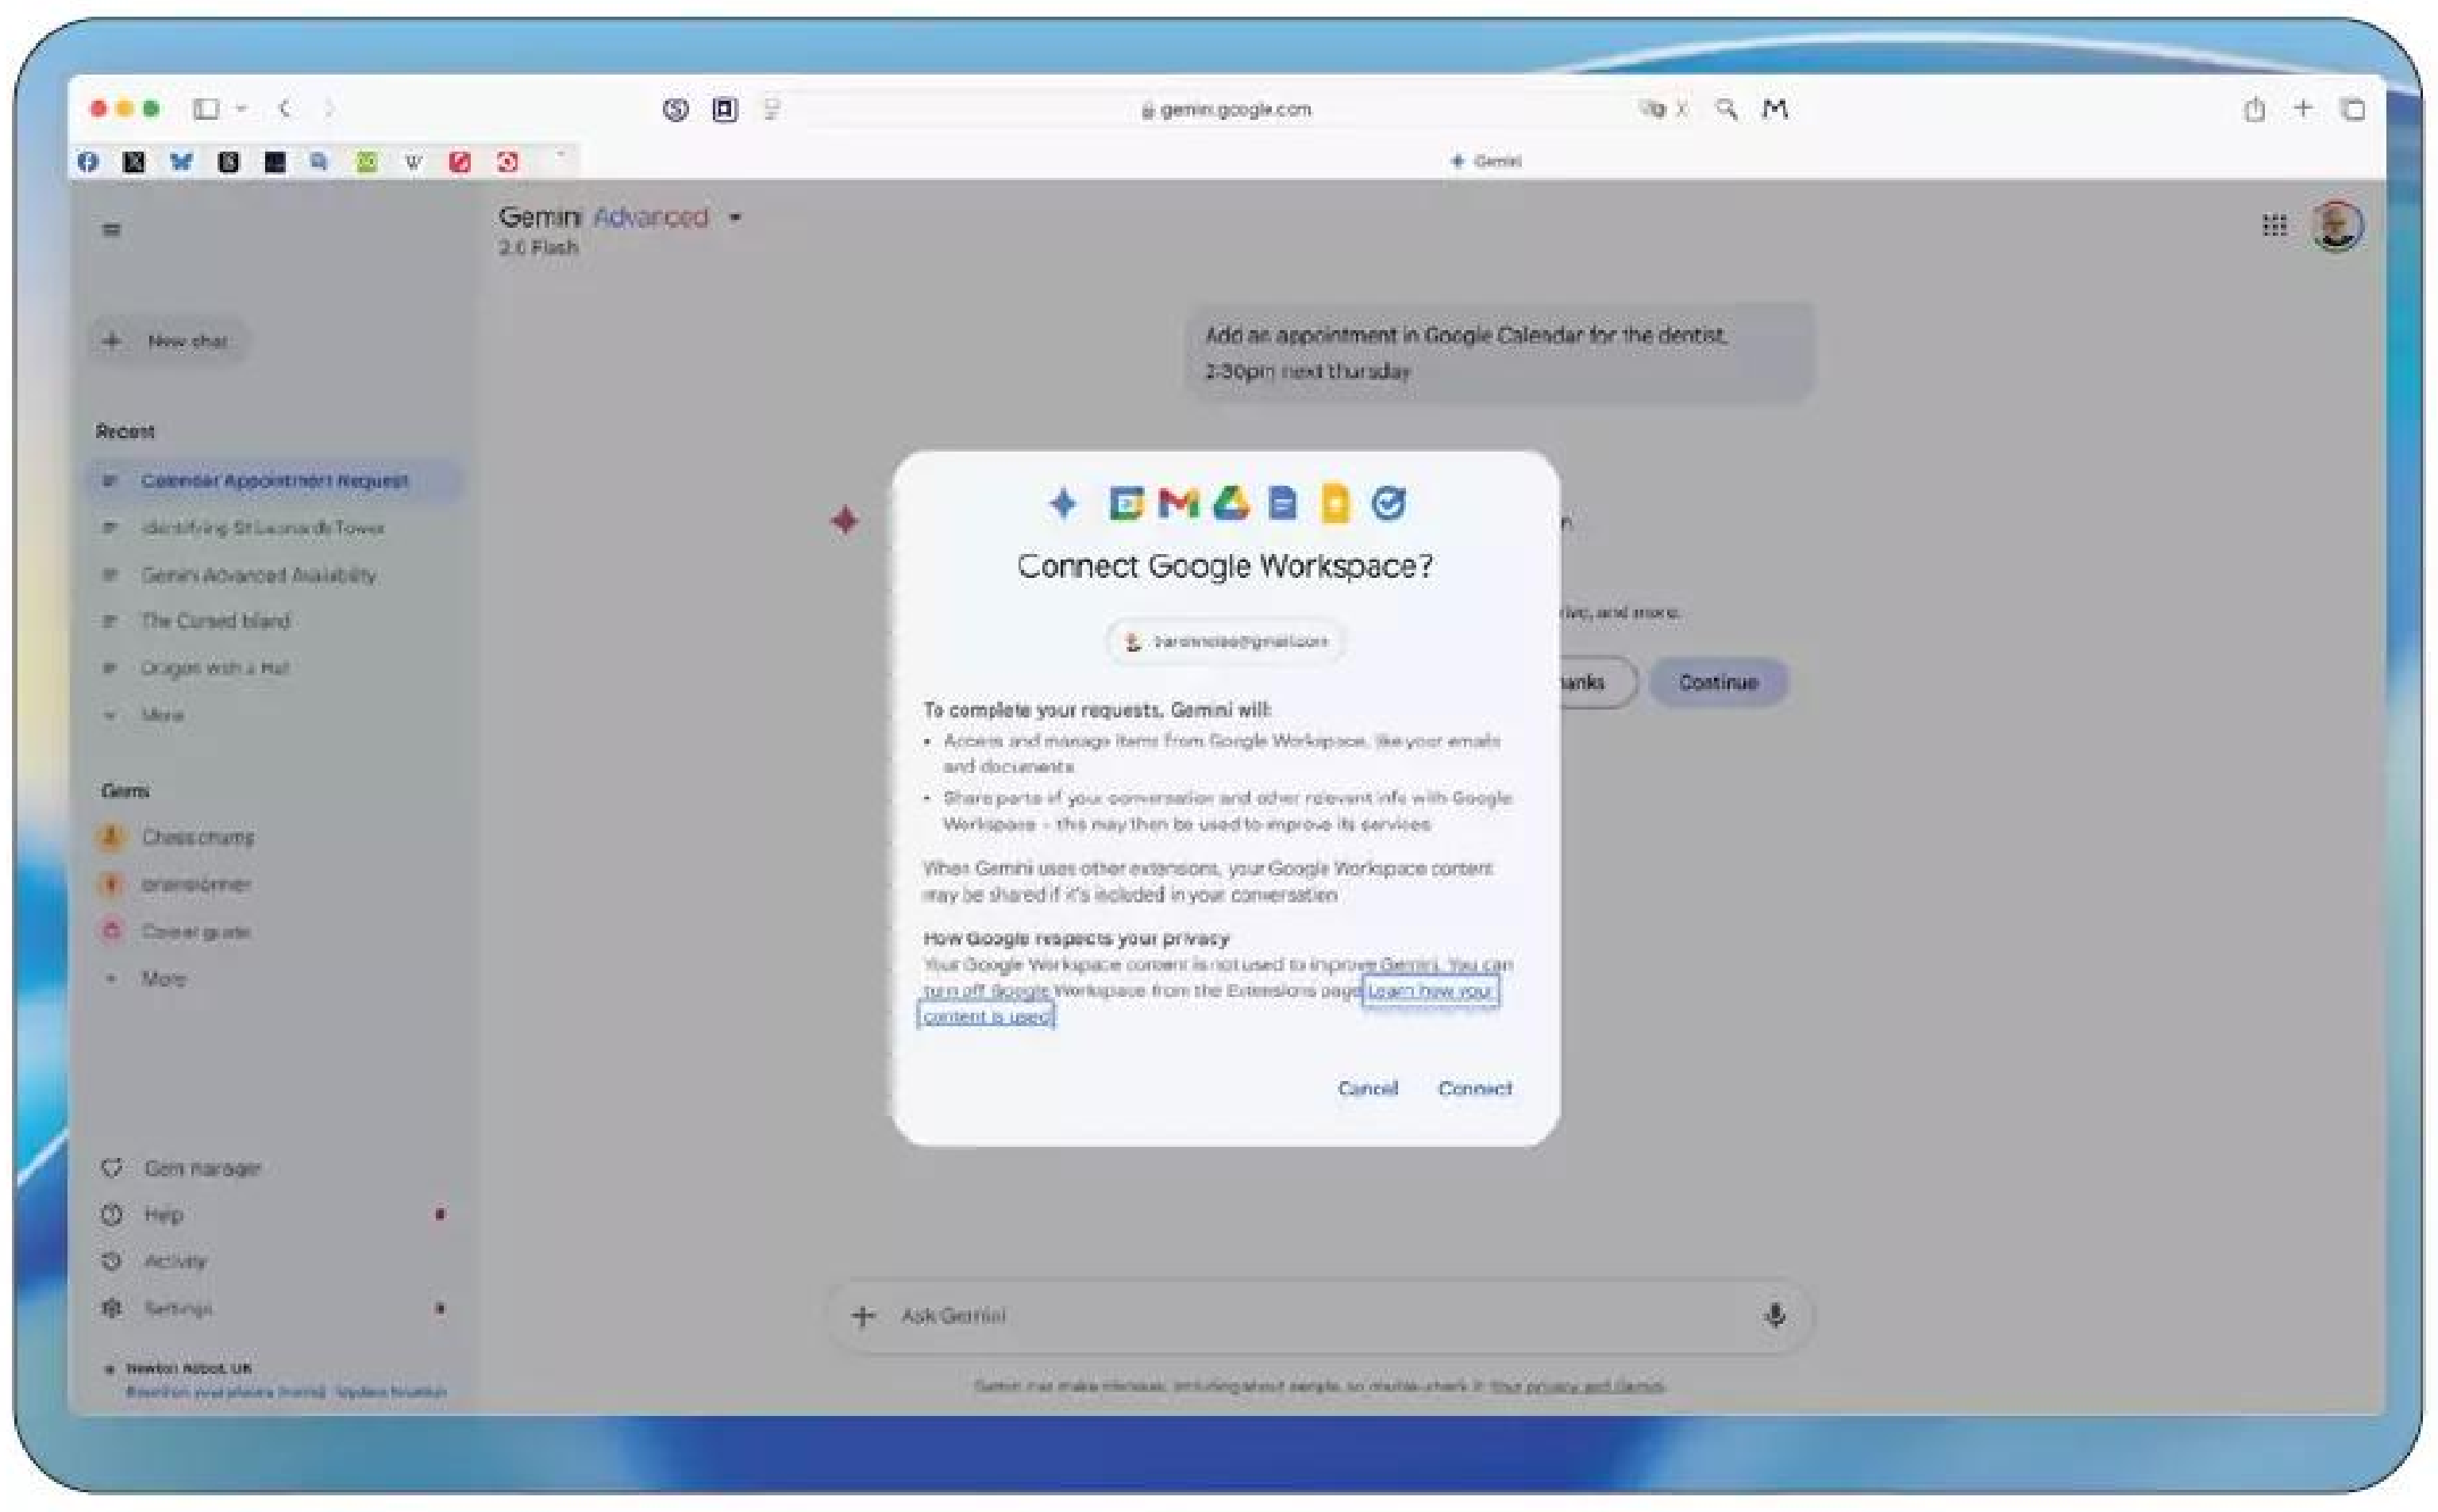
The building in the image is **St Leonards Clock Tower**, also known as **St Leonard's Tower** in Newton Abbot, Devon, England.

It's a prominent landmark in the town centre and is easily recognizable by its distinctive clock faces and stone construction.

1 You can upload images and files to Google Gemini. Click the plus icon in the search field for a small menu asking for an image, files or something from your Google Drive.

2 Here we've uploaded a local landmark to Gemini, and asked about it. The Google AI correctly identified the building and its whereabouts, and told us a little about it.

Connect to Google Workspace



Add an appointment in Google Calendar for the dentist, 2:30pm next thursday

Connect Google Workspace?

To complete your requests, Gemini will:

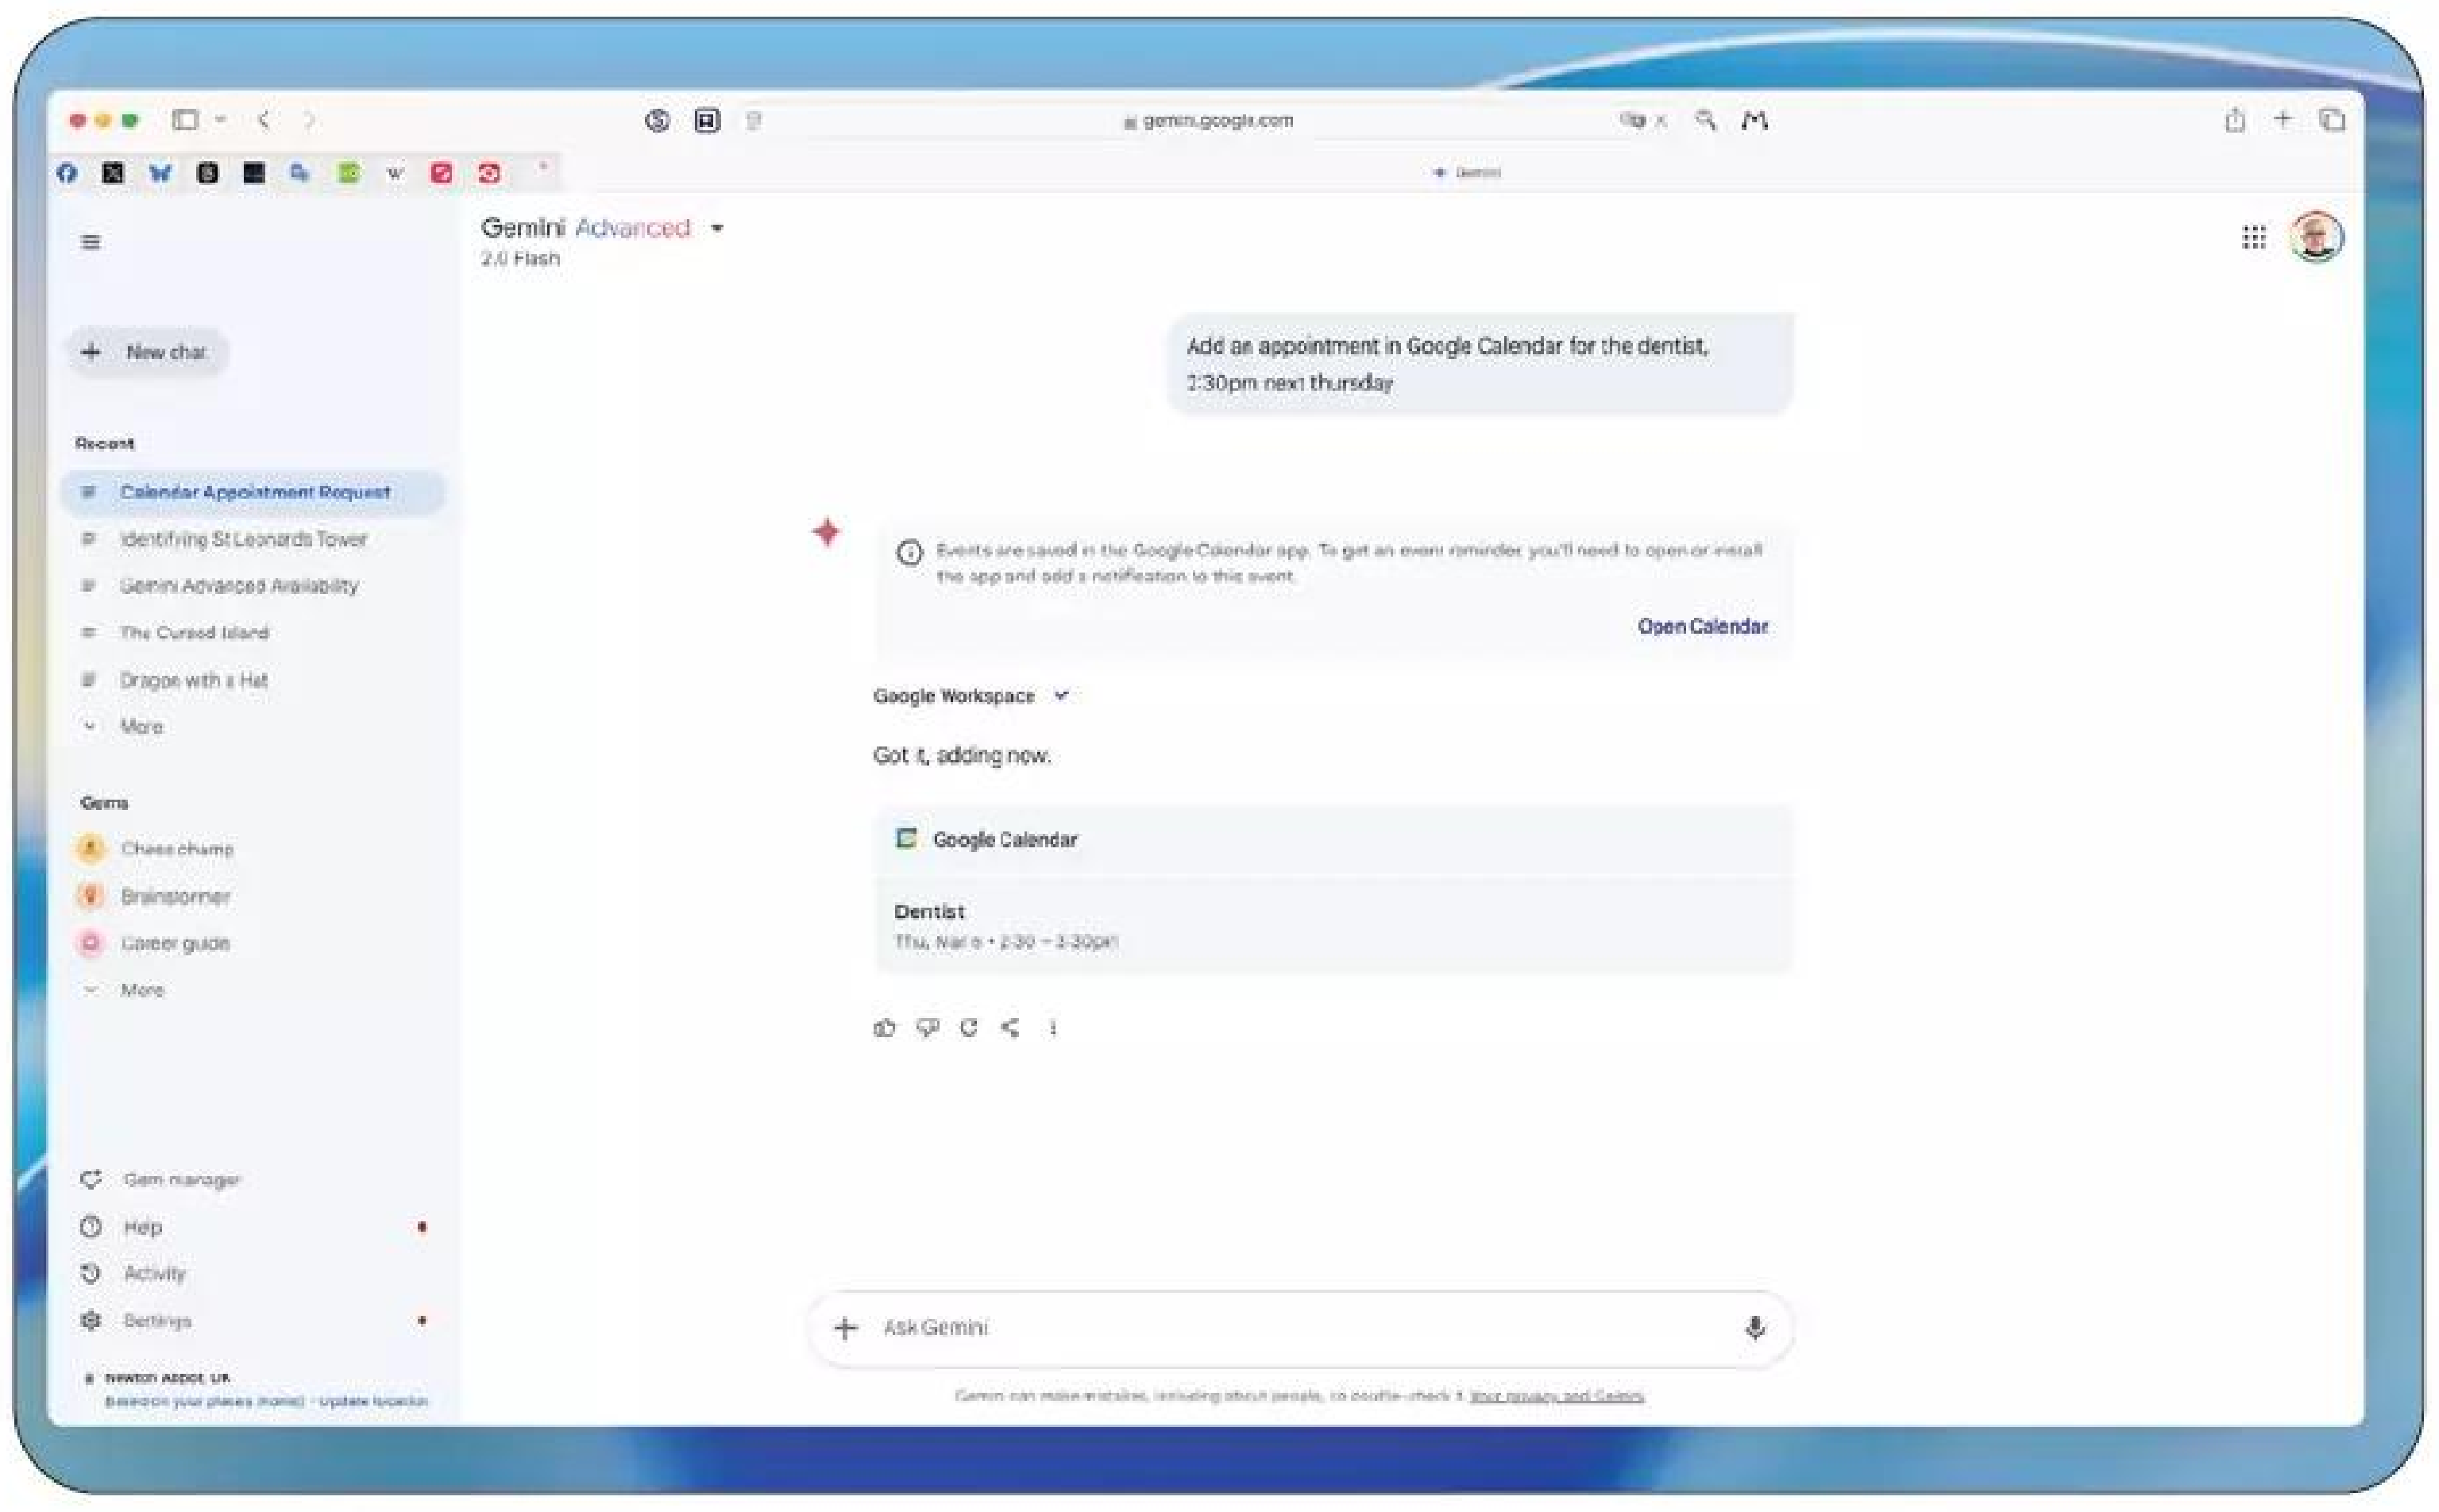
- Access and manage items from Google Workspace, like your emails and documents
- Share parts of your conversation and other relevant info with Google Workspace – this may then be used to improve its services

When Gemini uses other extensions, your Google Workspace content may be shared if it's included in your conversation

How Google respects your privacy

Your Google Workspace content is not used to improve Gemini. You can turn off Google Workspace from the Extensions page. Learn how your content is used

1 You can use Gemini to interact with your other Google apps, but first you have to connect the AI to your Google Workspace. Here we'll ask Gemini to add an appointment to Google Calendar. This window pops up; click Connect.



Add an appointment in Google Calendar for the dentist, 2:30pm next thursday

Events are saved in the Google Calendar app. To get an event reminder you'll need to open or install the app and add a notification to this event.

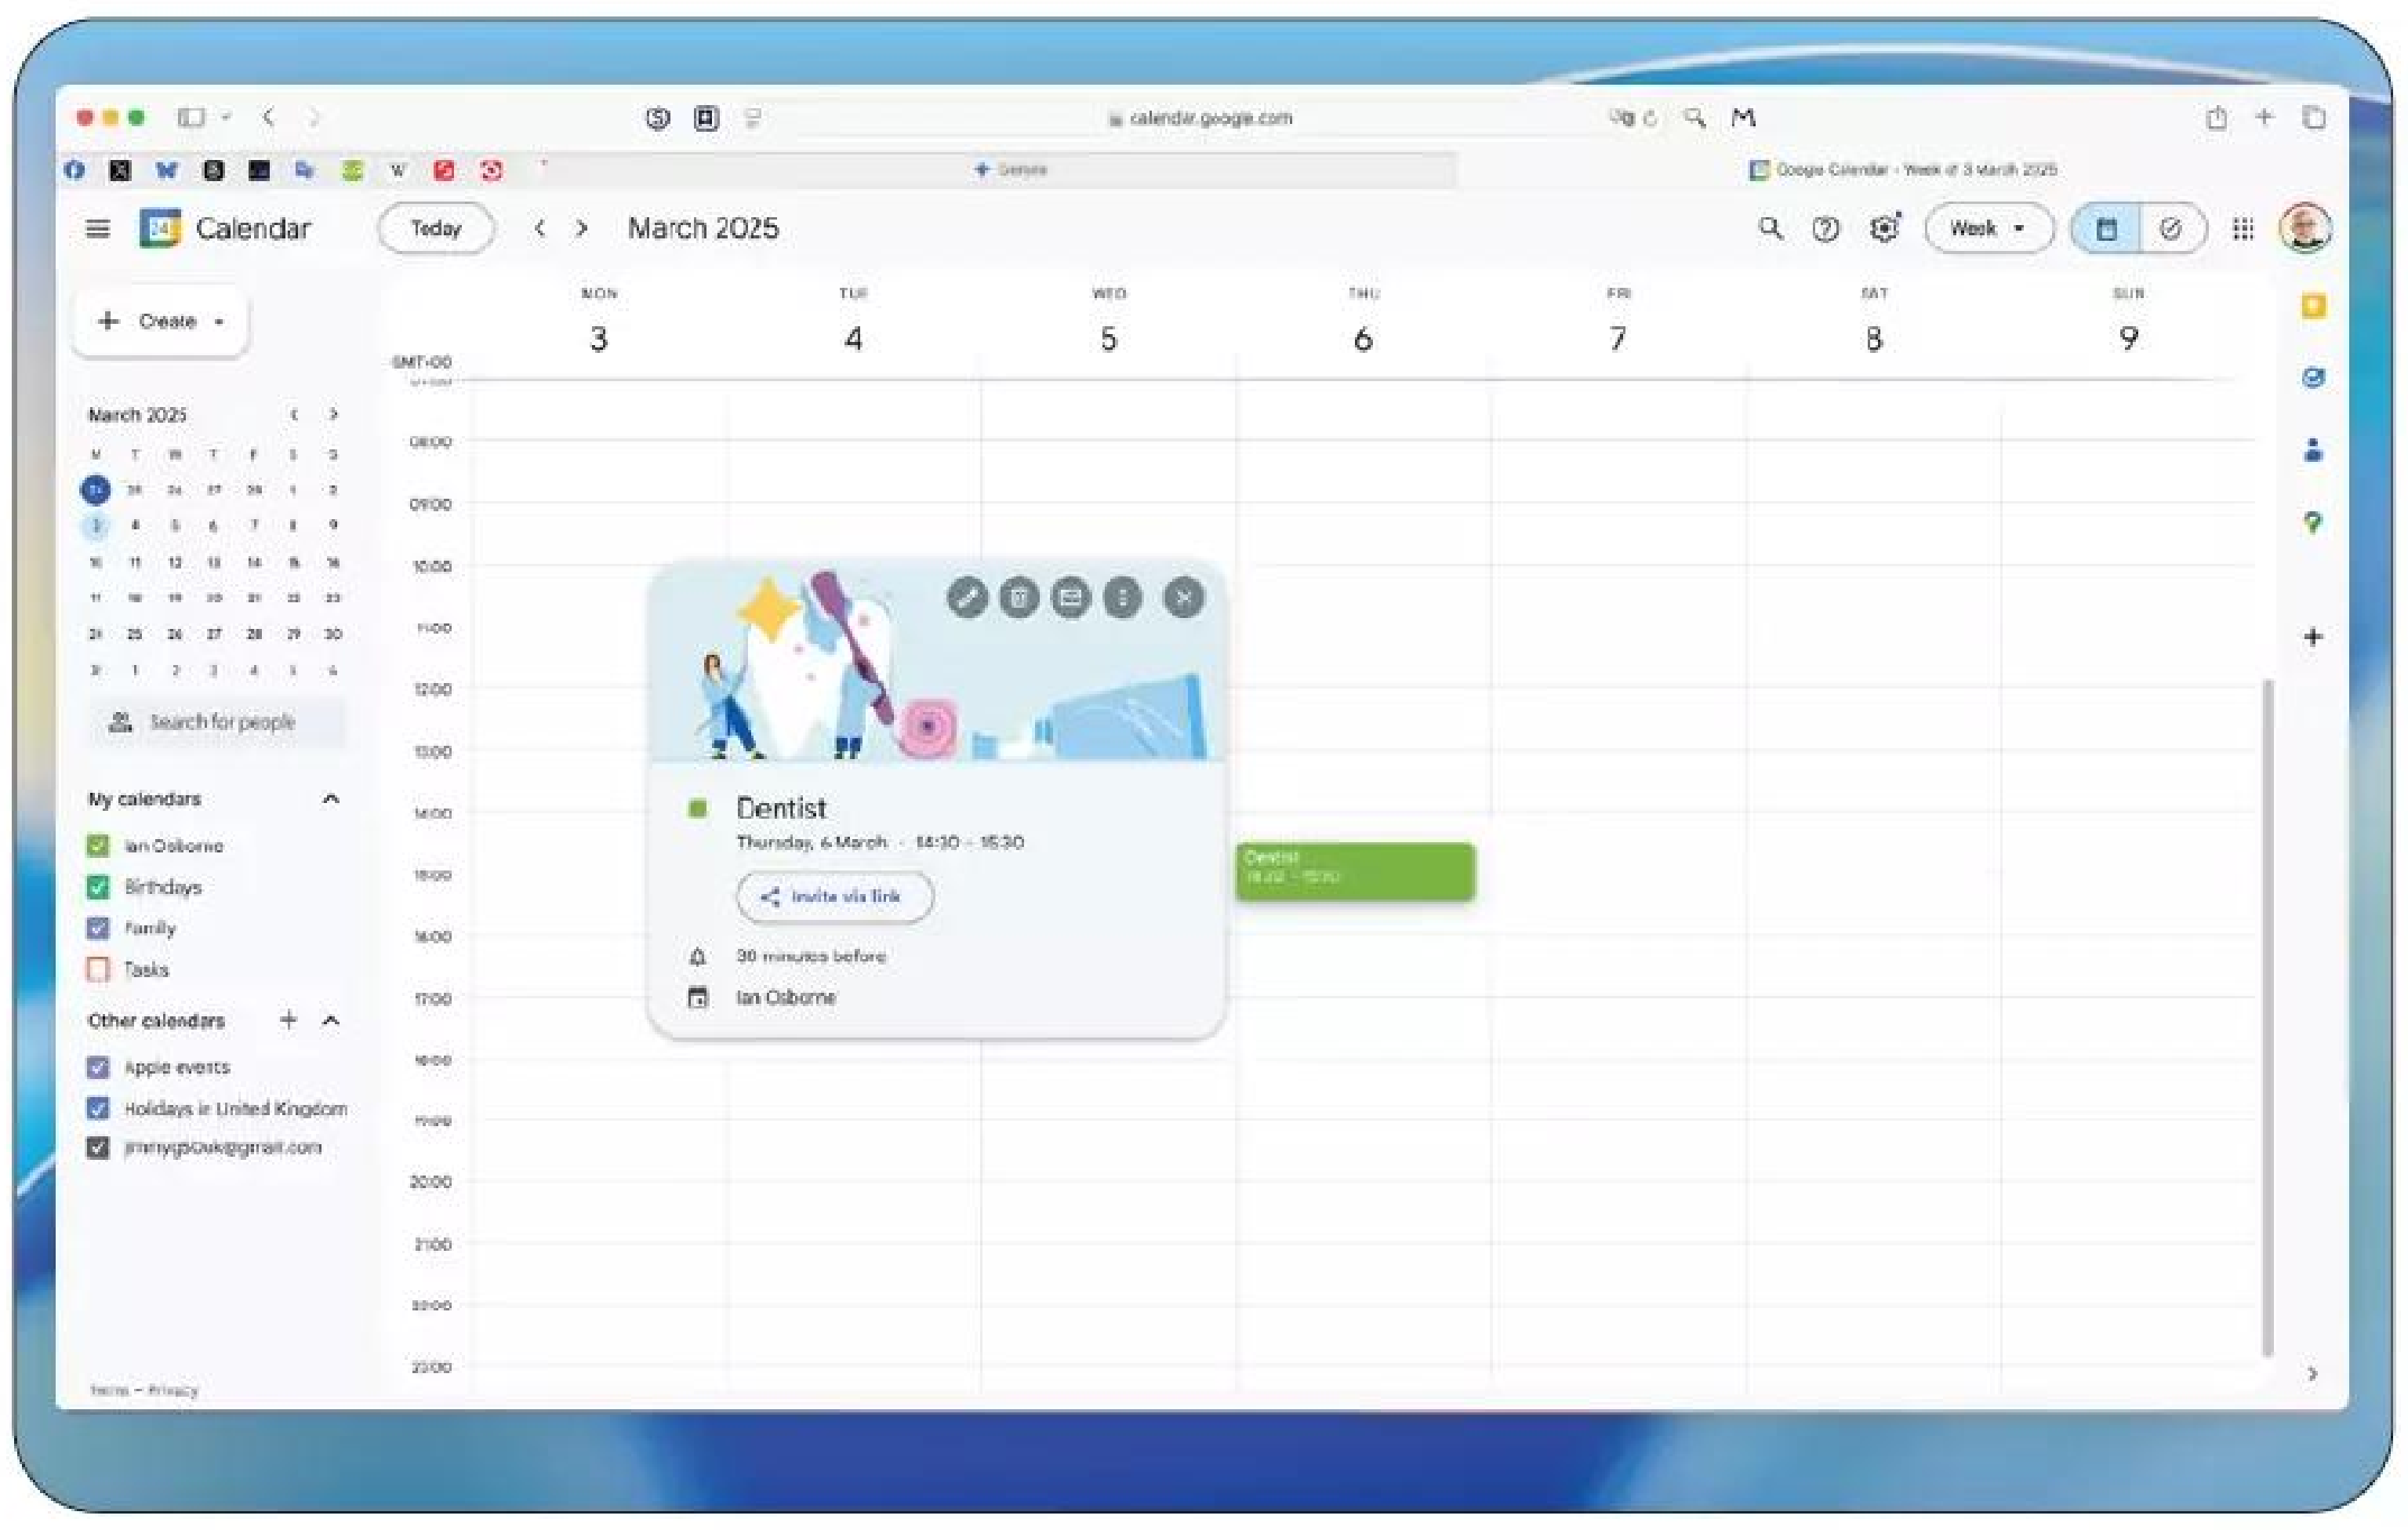
Google Workspace

Got it, adding now.

Google Calendar

Dentist
Thu, Mar 6 • 2:30 – 3:30pm

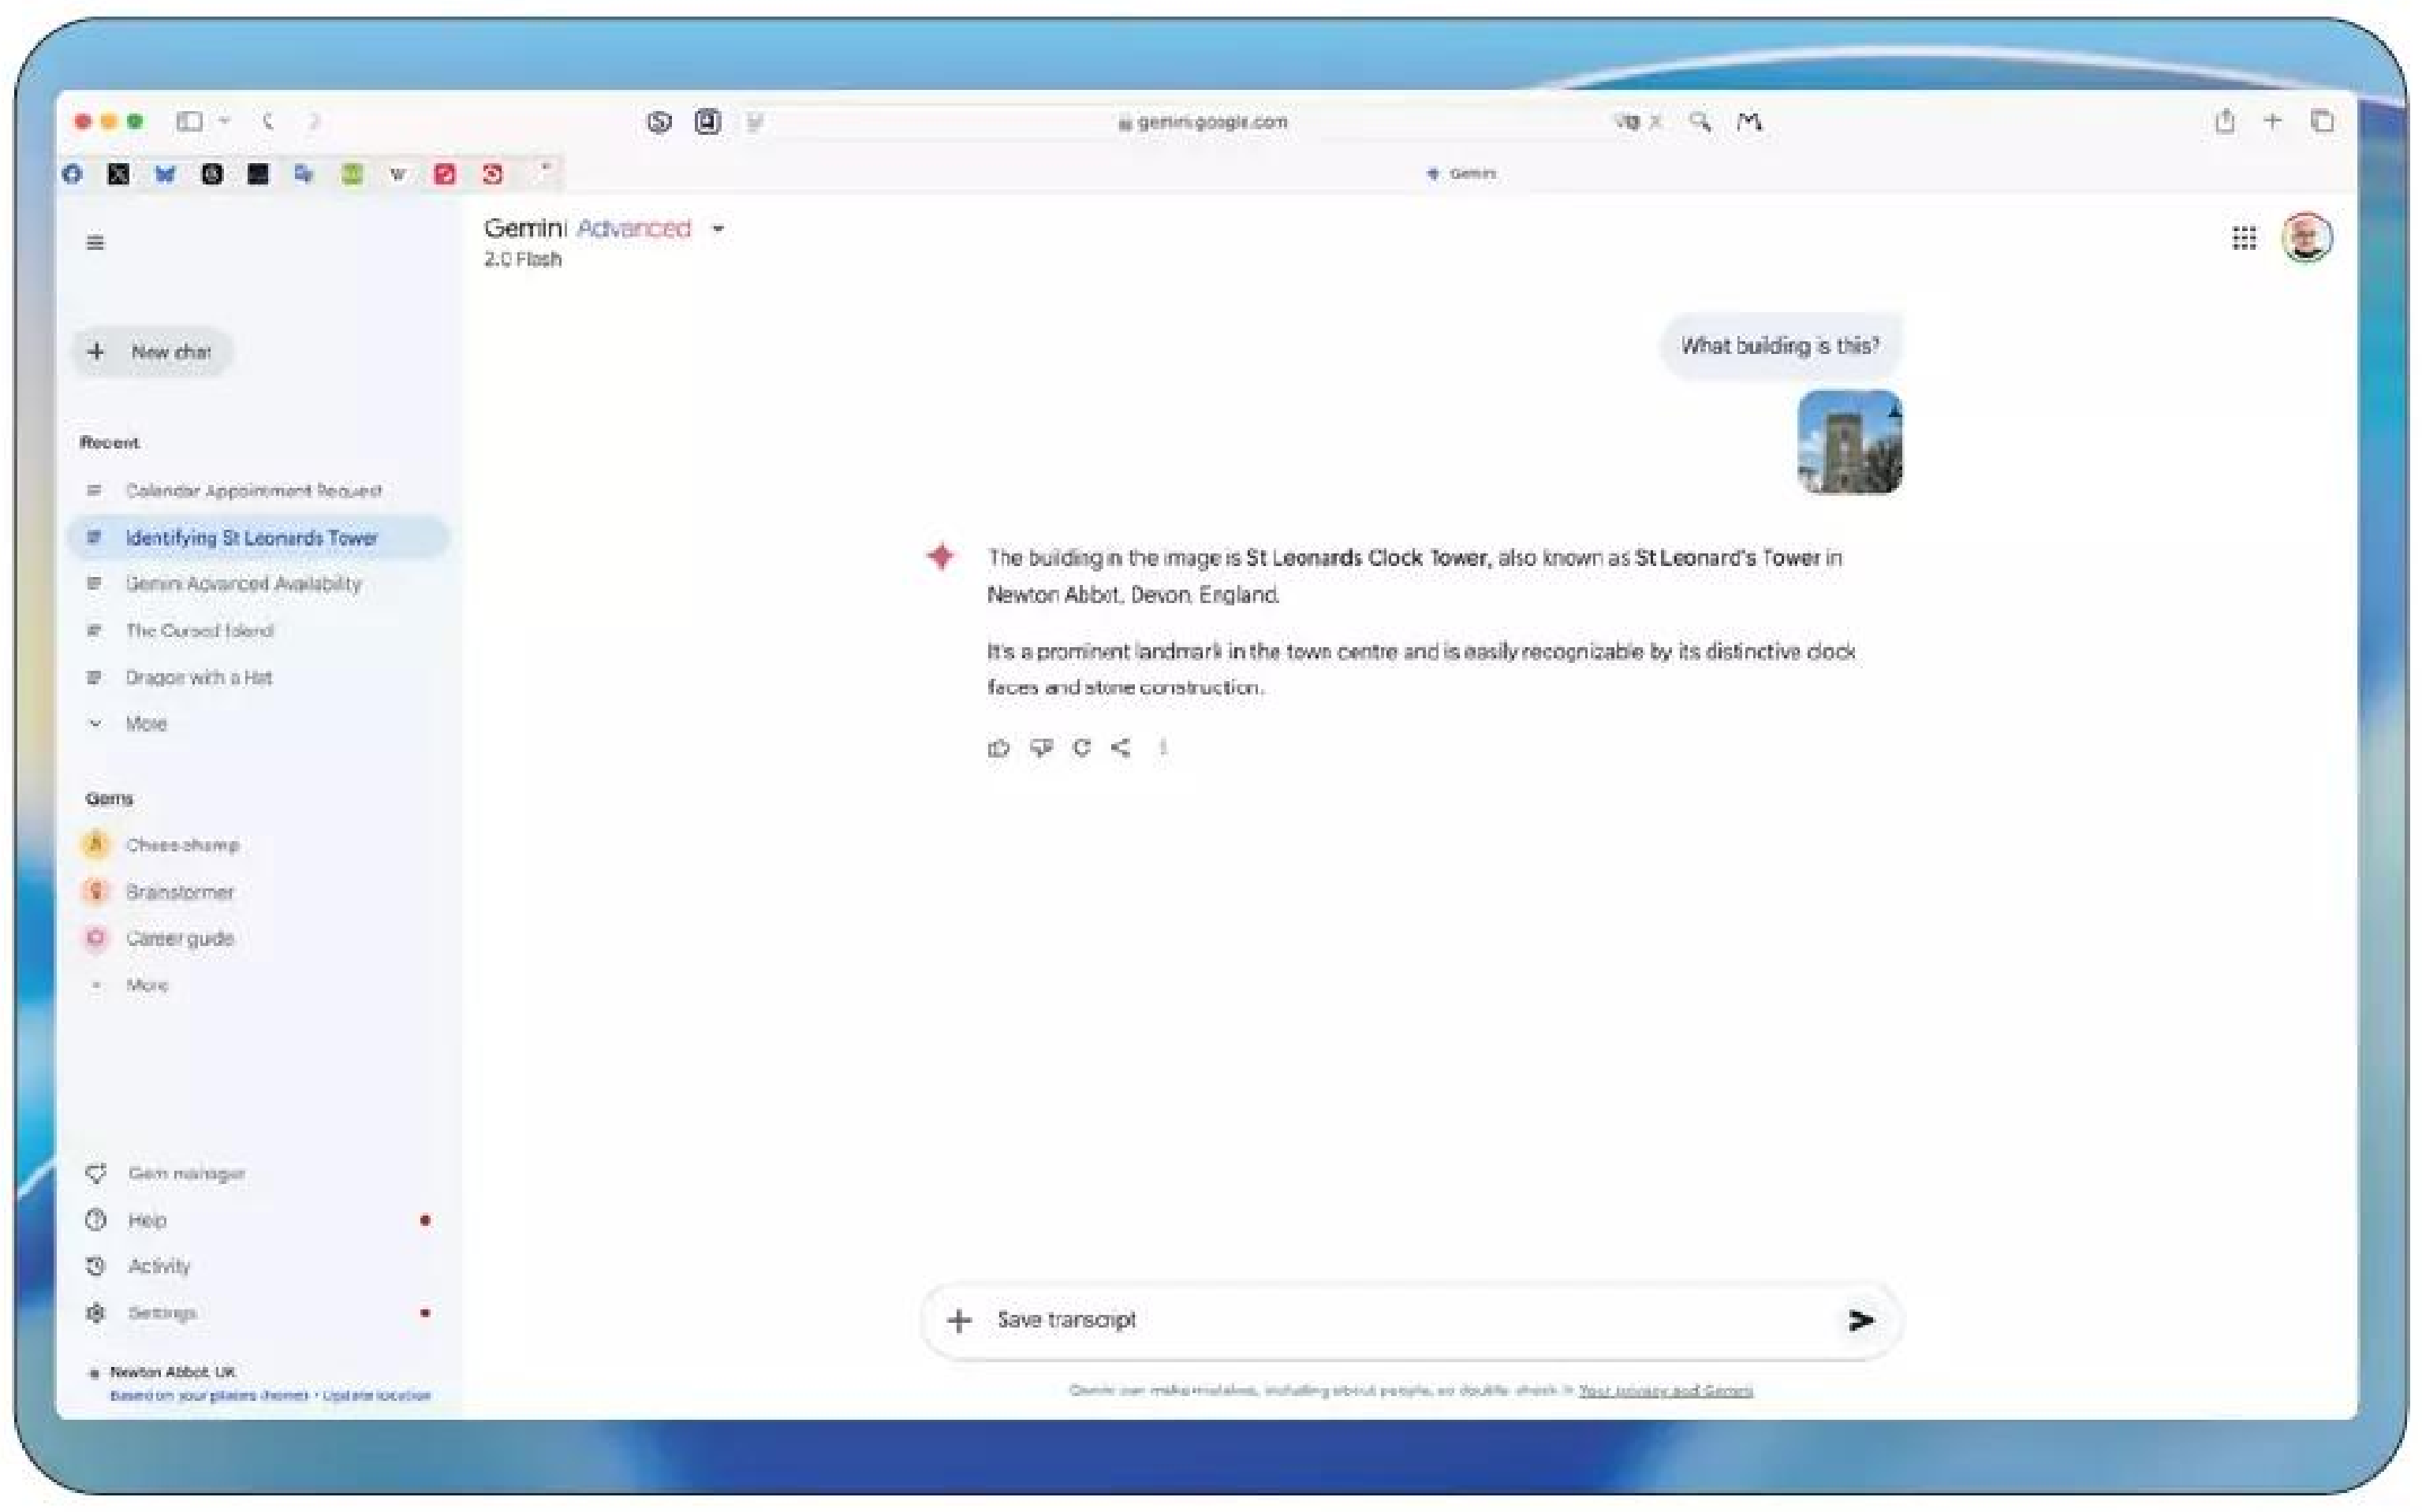
2 Gemini now adds the appointment you requested to your Google Calendar. Note; the service is not yet compatible with other calendar apps, such as Apple Calendar. You only have to link Gemini to your Workspace once.



Dentist
Thursday, 6 March · 14:30 – 15:30

3 The appointment is made, and added to Google Calendar. Note that you can use natural language when making appointments. For example, here we asked for 'next Thursday', and Gemini knew exactly when that is.

Save Transcript

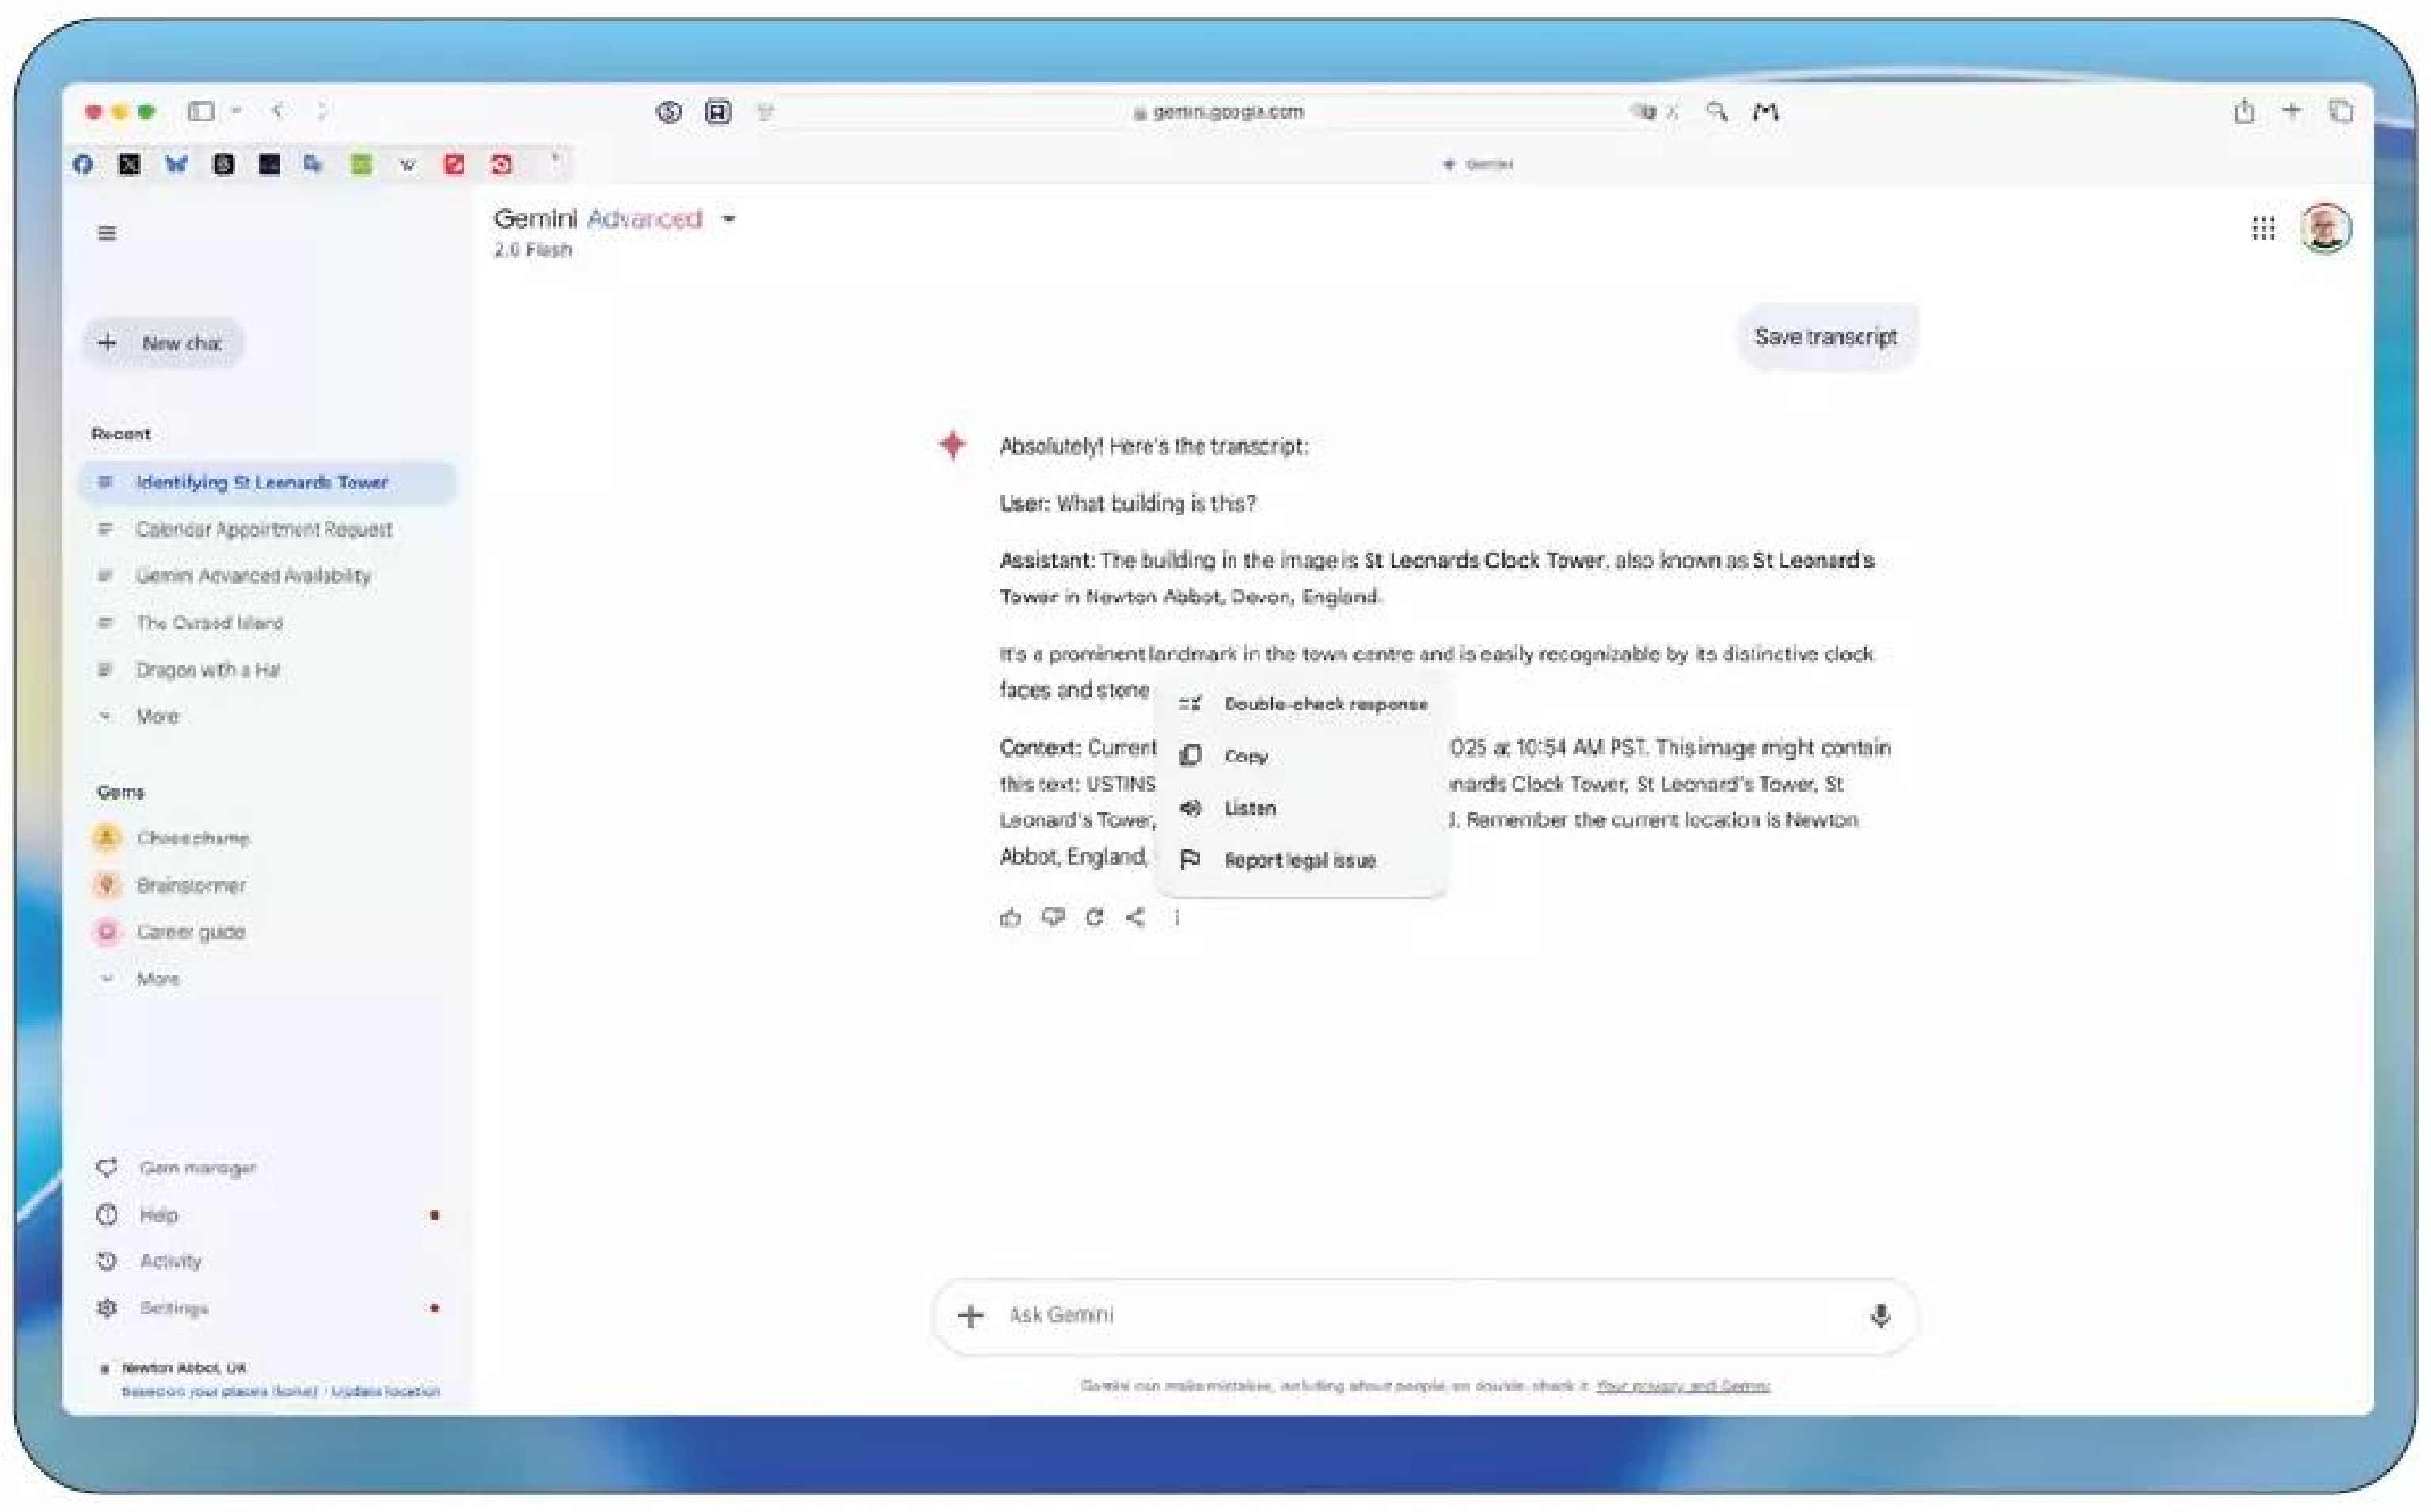


What building is this?

The building in the image is **St Leonards Clock Tower**, also known as **St Leonard's Tower** in Newton Abbot, Devon, England.

It's a prominent landmark in the town centre and is easily recognizable by its distinctive clock faces and stone construction.

1 You can save out a Google Gemini transcript for use in other apps, or simply for reference. First, after a Google conversation, type 'Save transcript'. Gemini reformats the conversation so you can save it more easily.



Save transcript

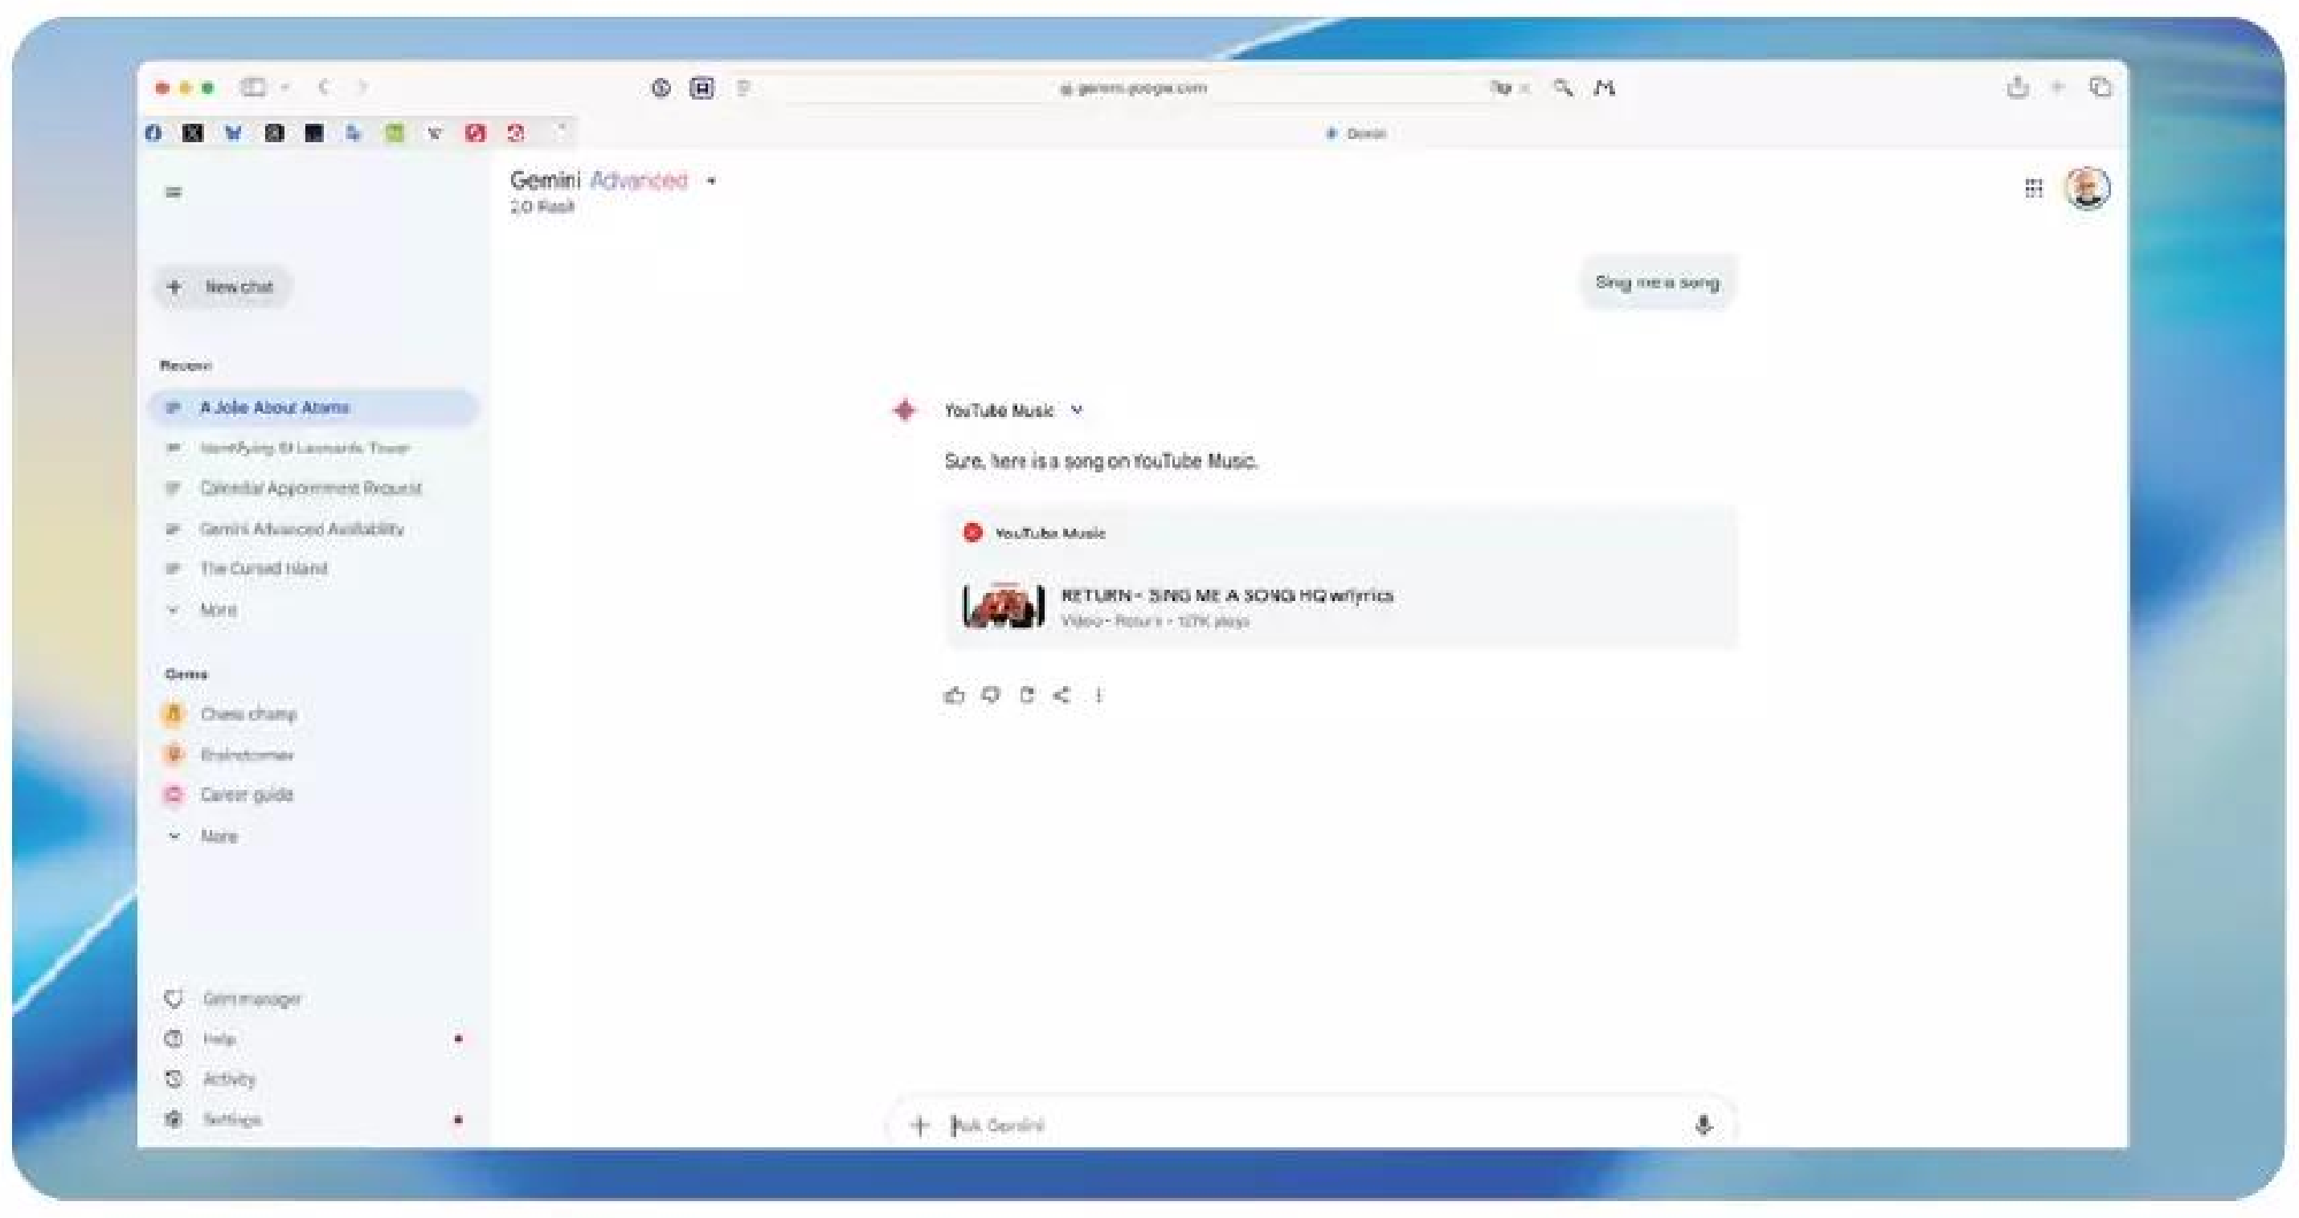
Absolutely! Here's the transcript:

User: What building is this?

Assistant: The building in the image is **St Leonards Clock Tower**, also known as **St Leonard's Tower** in Newton Abbot, Devon, England.

It's a prominent landmark in the town centre and is easily recognizable by its distinctive clock faces and stone

2 Click the three-dots icon as shown and you can double-check Gemini's answers, copy the text to paste it in another app, have it read to you or report a legal issue. The icon to its left gives you share and export options.



Sing me a song

YouTube Music

Sure, here is a song on YouTube Music.

YouTube Music
RETURN - SING ME A SONG HQ w/lyrics

A Bit of Fun...

Gemini can play as well as work. For a little fun, try 'Tell me a joke,' 'Sing me a song,' or 'Tell me a riddle.' And why stop there? Experiment with other fun things to do with Google Gemini.

Apple Intelligence for iPhone

iOS 26 has added a host of new features that expand the uses of Apple Intelligence on your iPhone. Making Apple's smartphone the showcase device for AI features. We take you through some of the most useful of these and with guides to how they are integrated into your favourite apps.

Learn more >

Tue 1 Apr
09:41

Can your iPhone use Apple Intelligence?

The system requirements for Apple Intelligence are more stringent than those for iOS 26. You can run them if you have one of the following iPhones:

iOS 26 and Apple Intelligence

- iPhone 17 series
- iPhone 16 series
- iPhone 15 Pro or Pro Max

iOS 26 Without Apple Intelligence

- Regular iPhone 15
- iPhone 14 series
- iPhone 13 series
- iPhone 12 series
- iPhone 11 series
- iPhone SE (2nd gen and later)

New Apple Intelligence Features

Apple's amazing artificial intelligence is improving all the time.

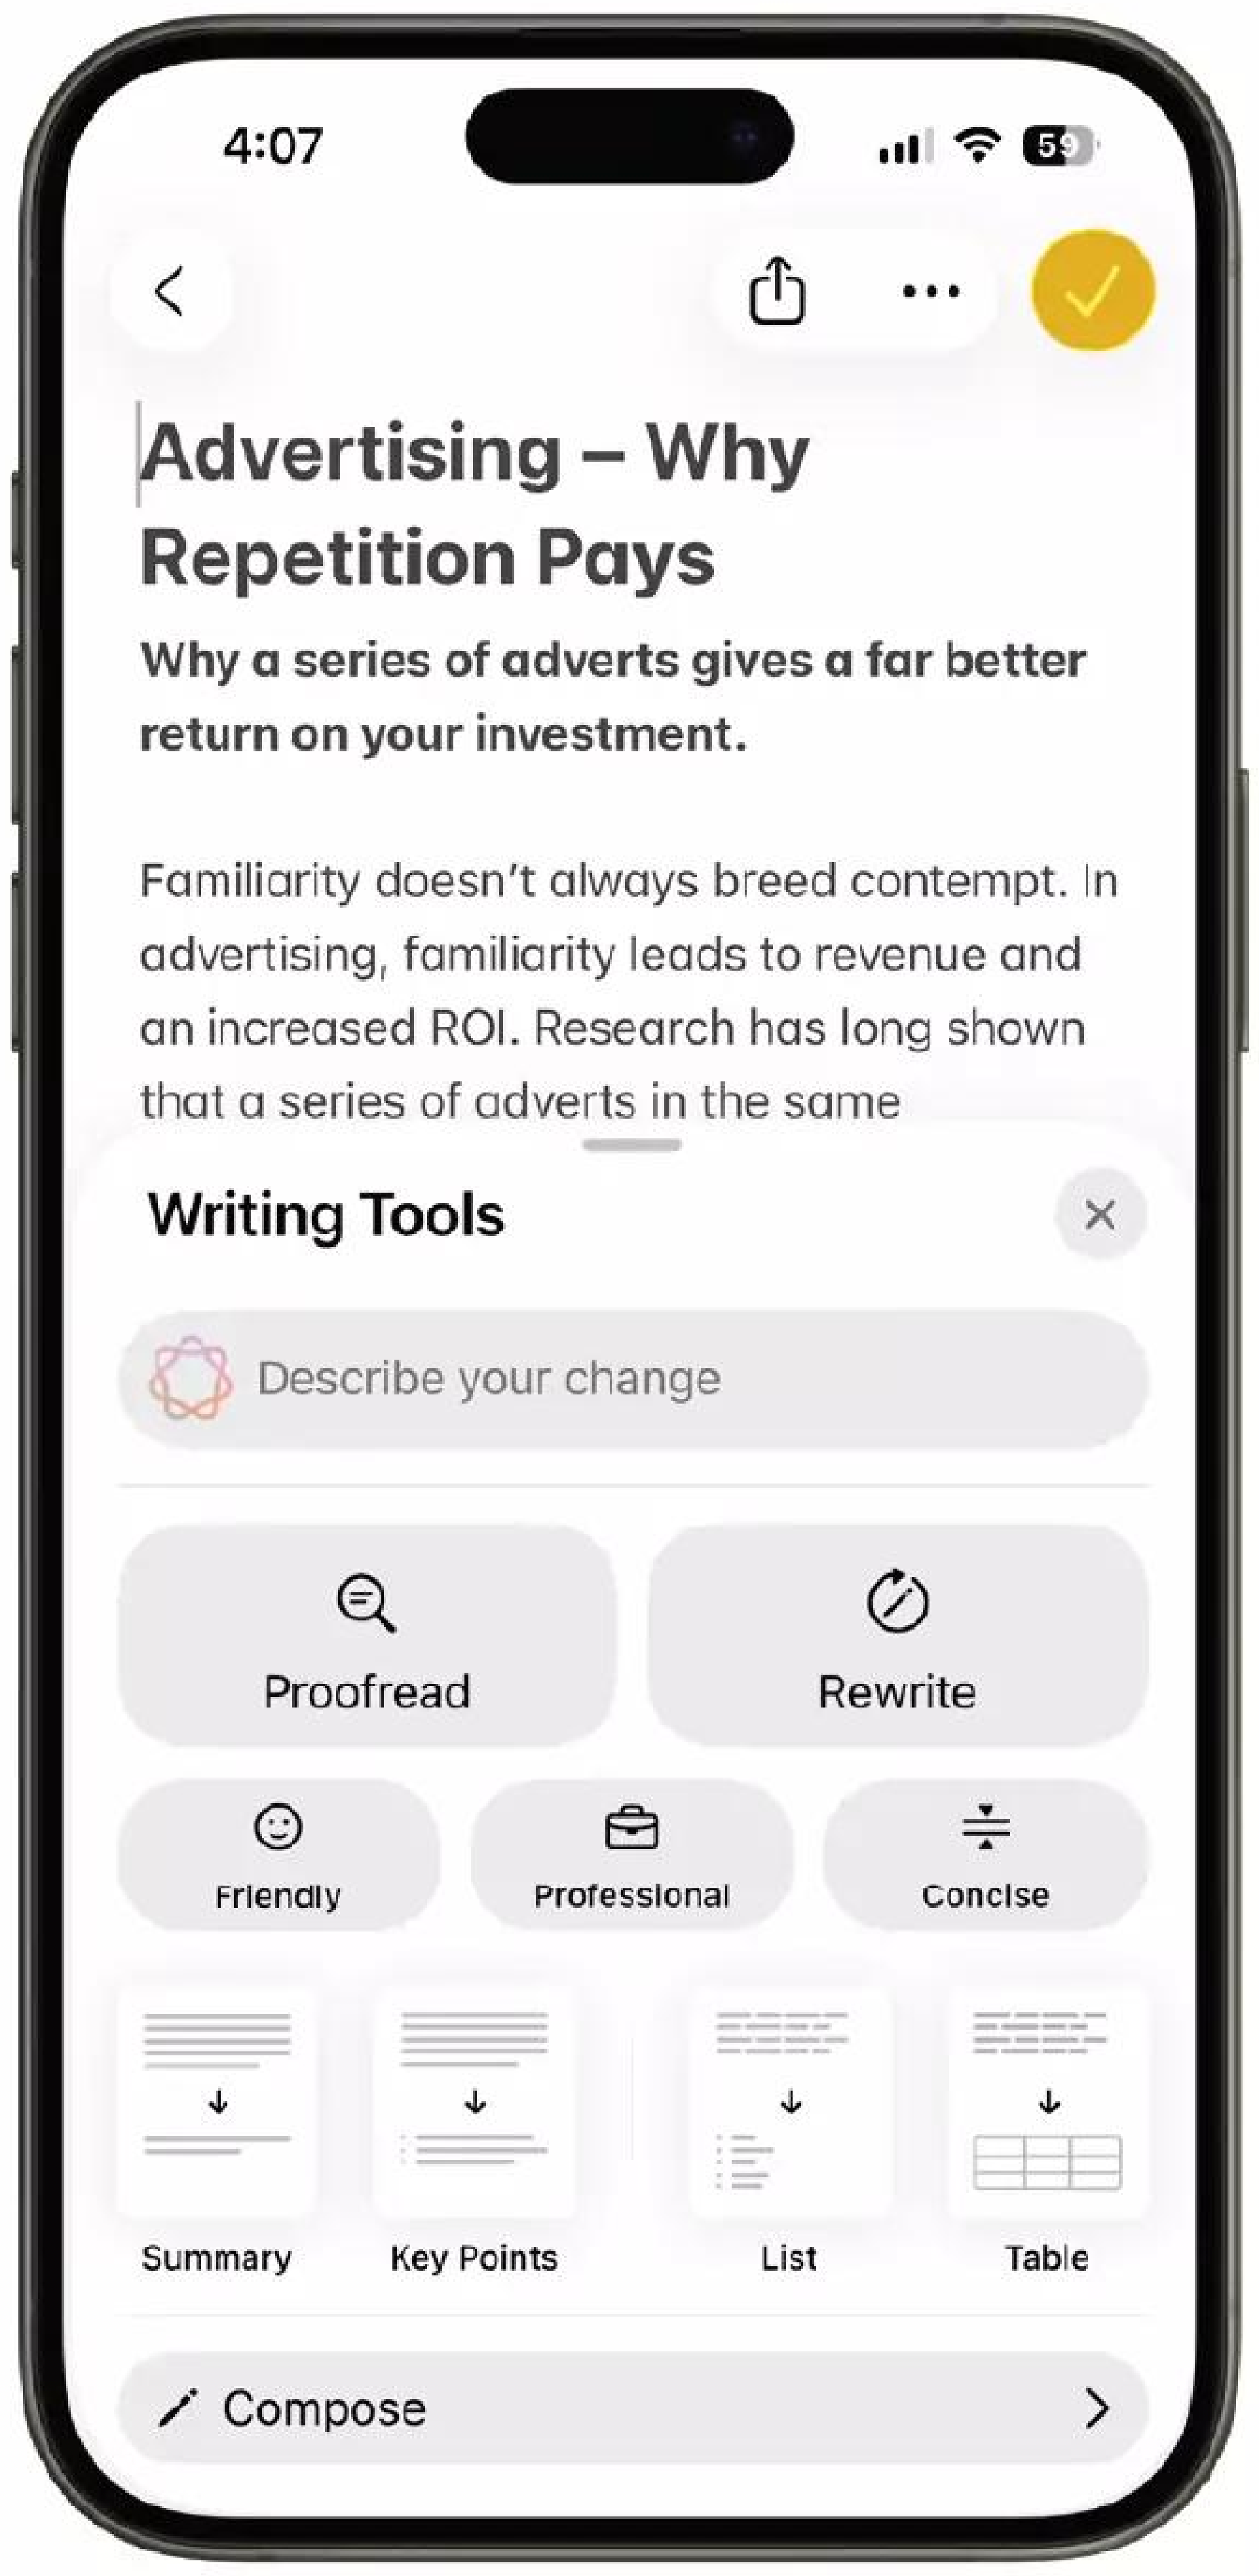
System Requirements

Only iPhone 15 Pro series iPhones and above can use Apple Intelligence features.

Artificial Intelligence is all over the news, and Apple's own range of AI tools, Apple Intelligence, is going from strength to strength. It helps you get even more from your iPhone by understanding how you use your smartphone and reacting accordingly. It can understand and create language and images, and take action on your behalf. It's powerful, intuitive, deeply integrated into iOS and its apps, and above all, personal.

Writing Tools

Writing Tools is an Apple Intelligence-powered feature that lets you improve your writing. It's available 'almost anywhere you write text', including Notes, Mail, Pages, Safari, Keynote and more – including third party apps. With Writing Tools, you can proofread a piece for grammar and syntax, and rewrite it to make it briefer, more personal or more professional. The Summarise option gives a short overview of what you've written, and Smart Reply reviews the contents of an email and suggests quick responses.



Advertising – Why Repetition Pays

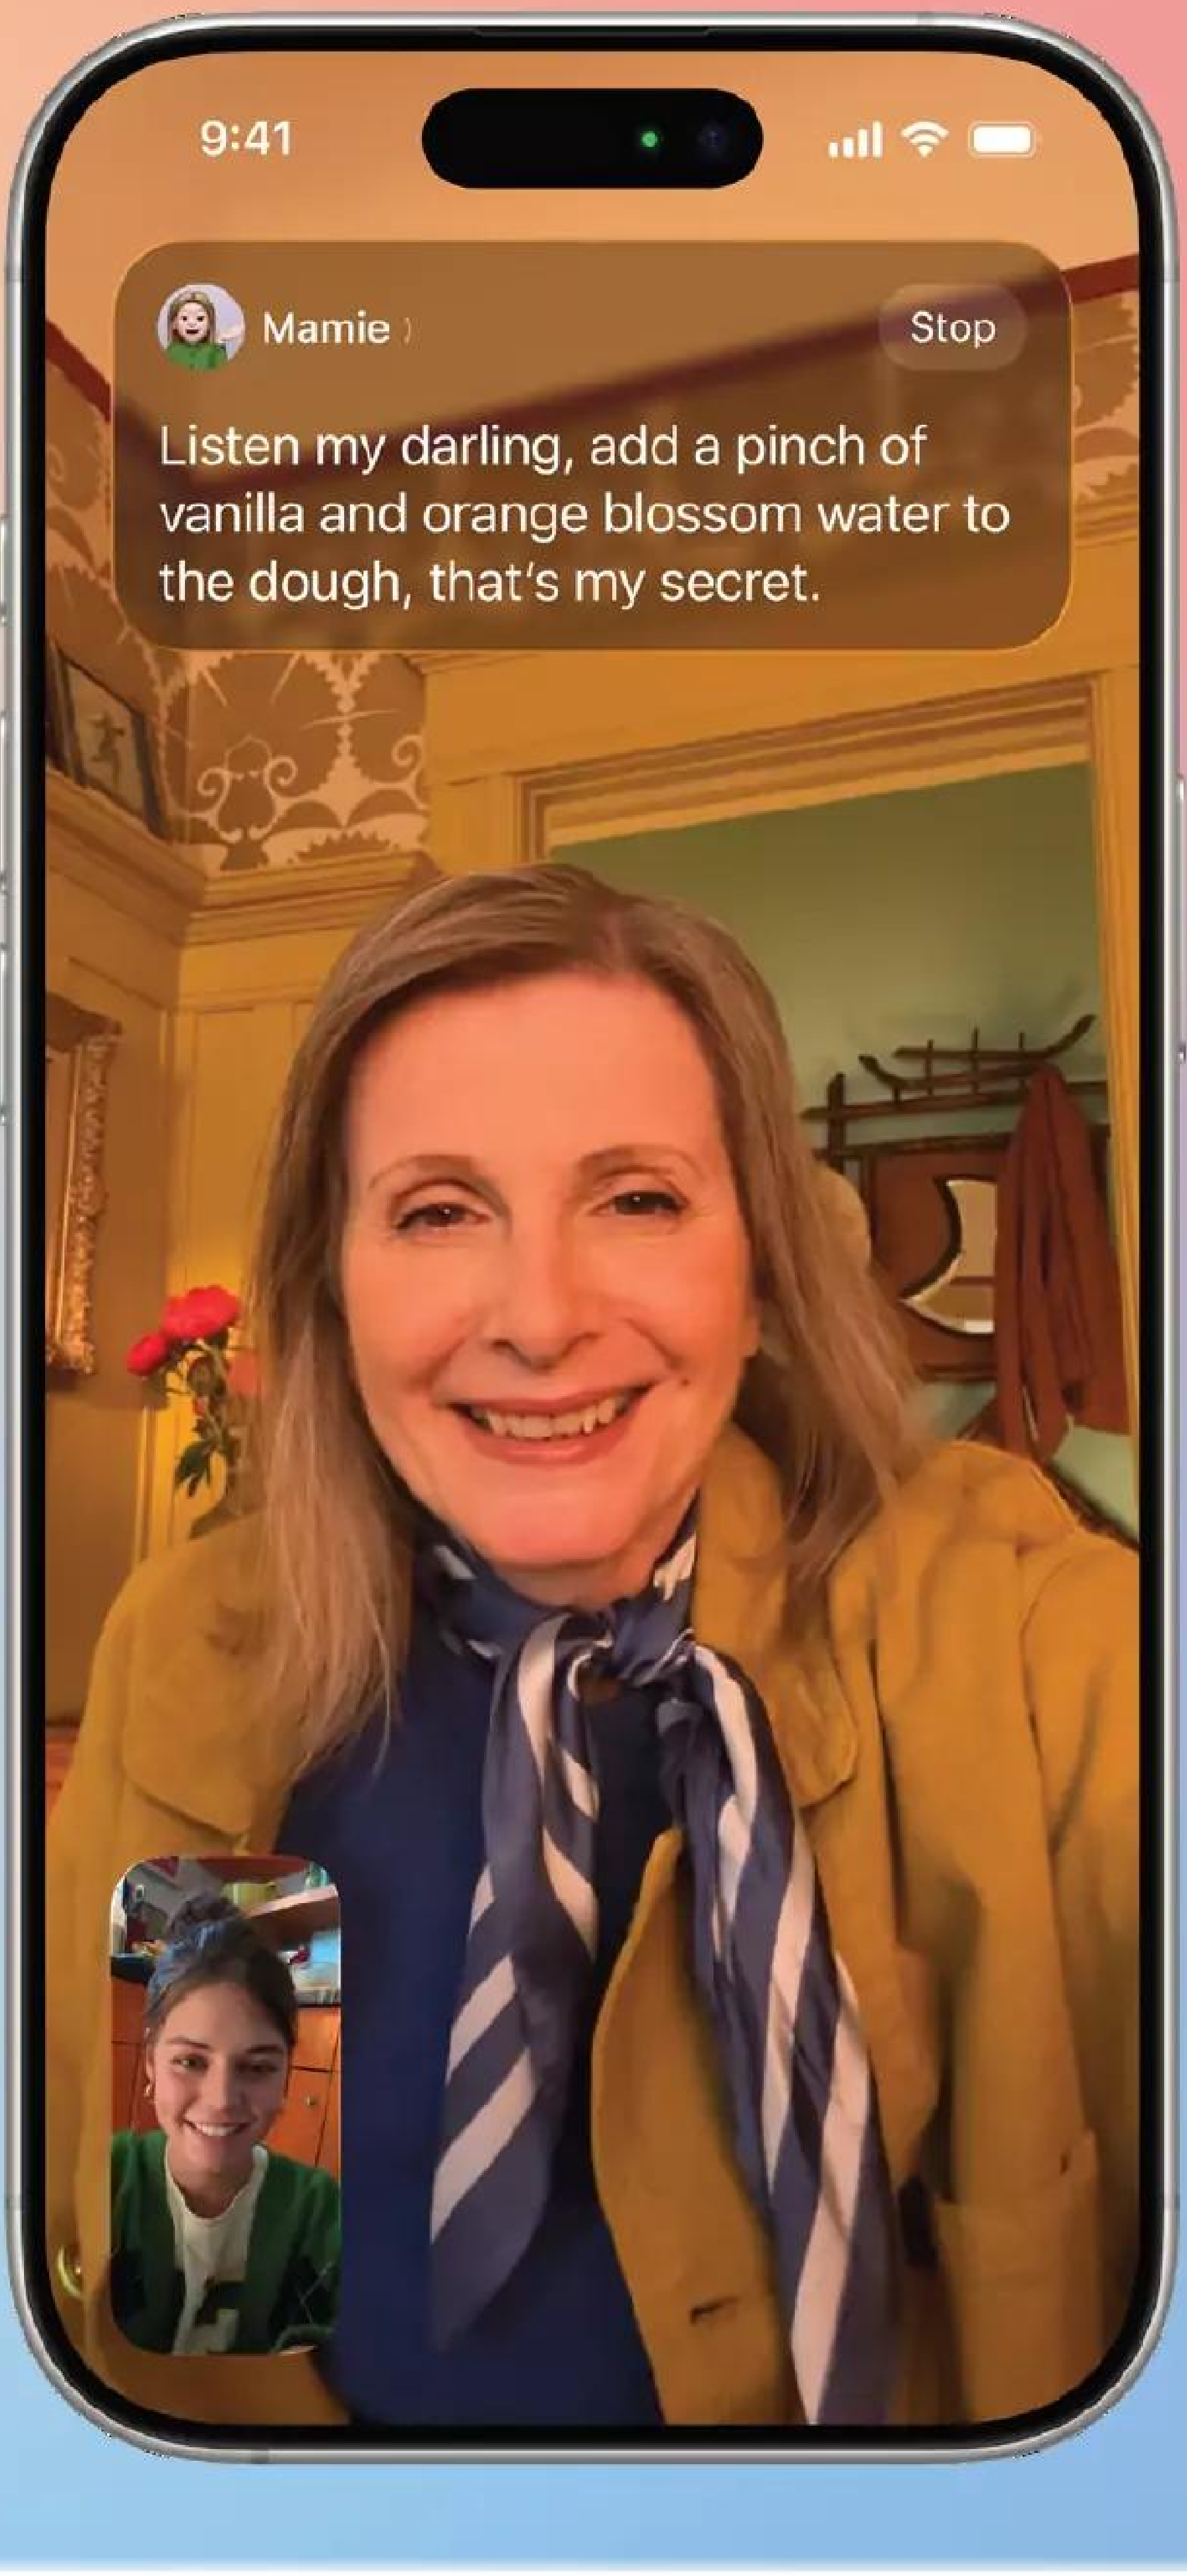
Why a series of adverts gives a far better return on your investment.

Familiarity doesn't always breed contempt. In advertising, familiarity leads to revenue and an increased ROI. Research has long shown that a series of adverts in the same

System-wide Writing Tools can summarise or rewrite your words.

Language Translation

With Apple Intelligence, you can converse with someone who speaks a different language to you. Live Translation is integrated into Messages, FaceTime and the Phone app, translating text and audio on the fly. Live Translation is enabled by Apple-built models that run entirely on device, so users' personal conversations stay personal.

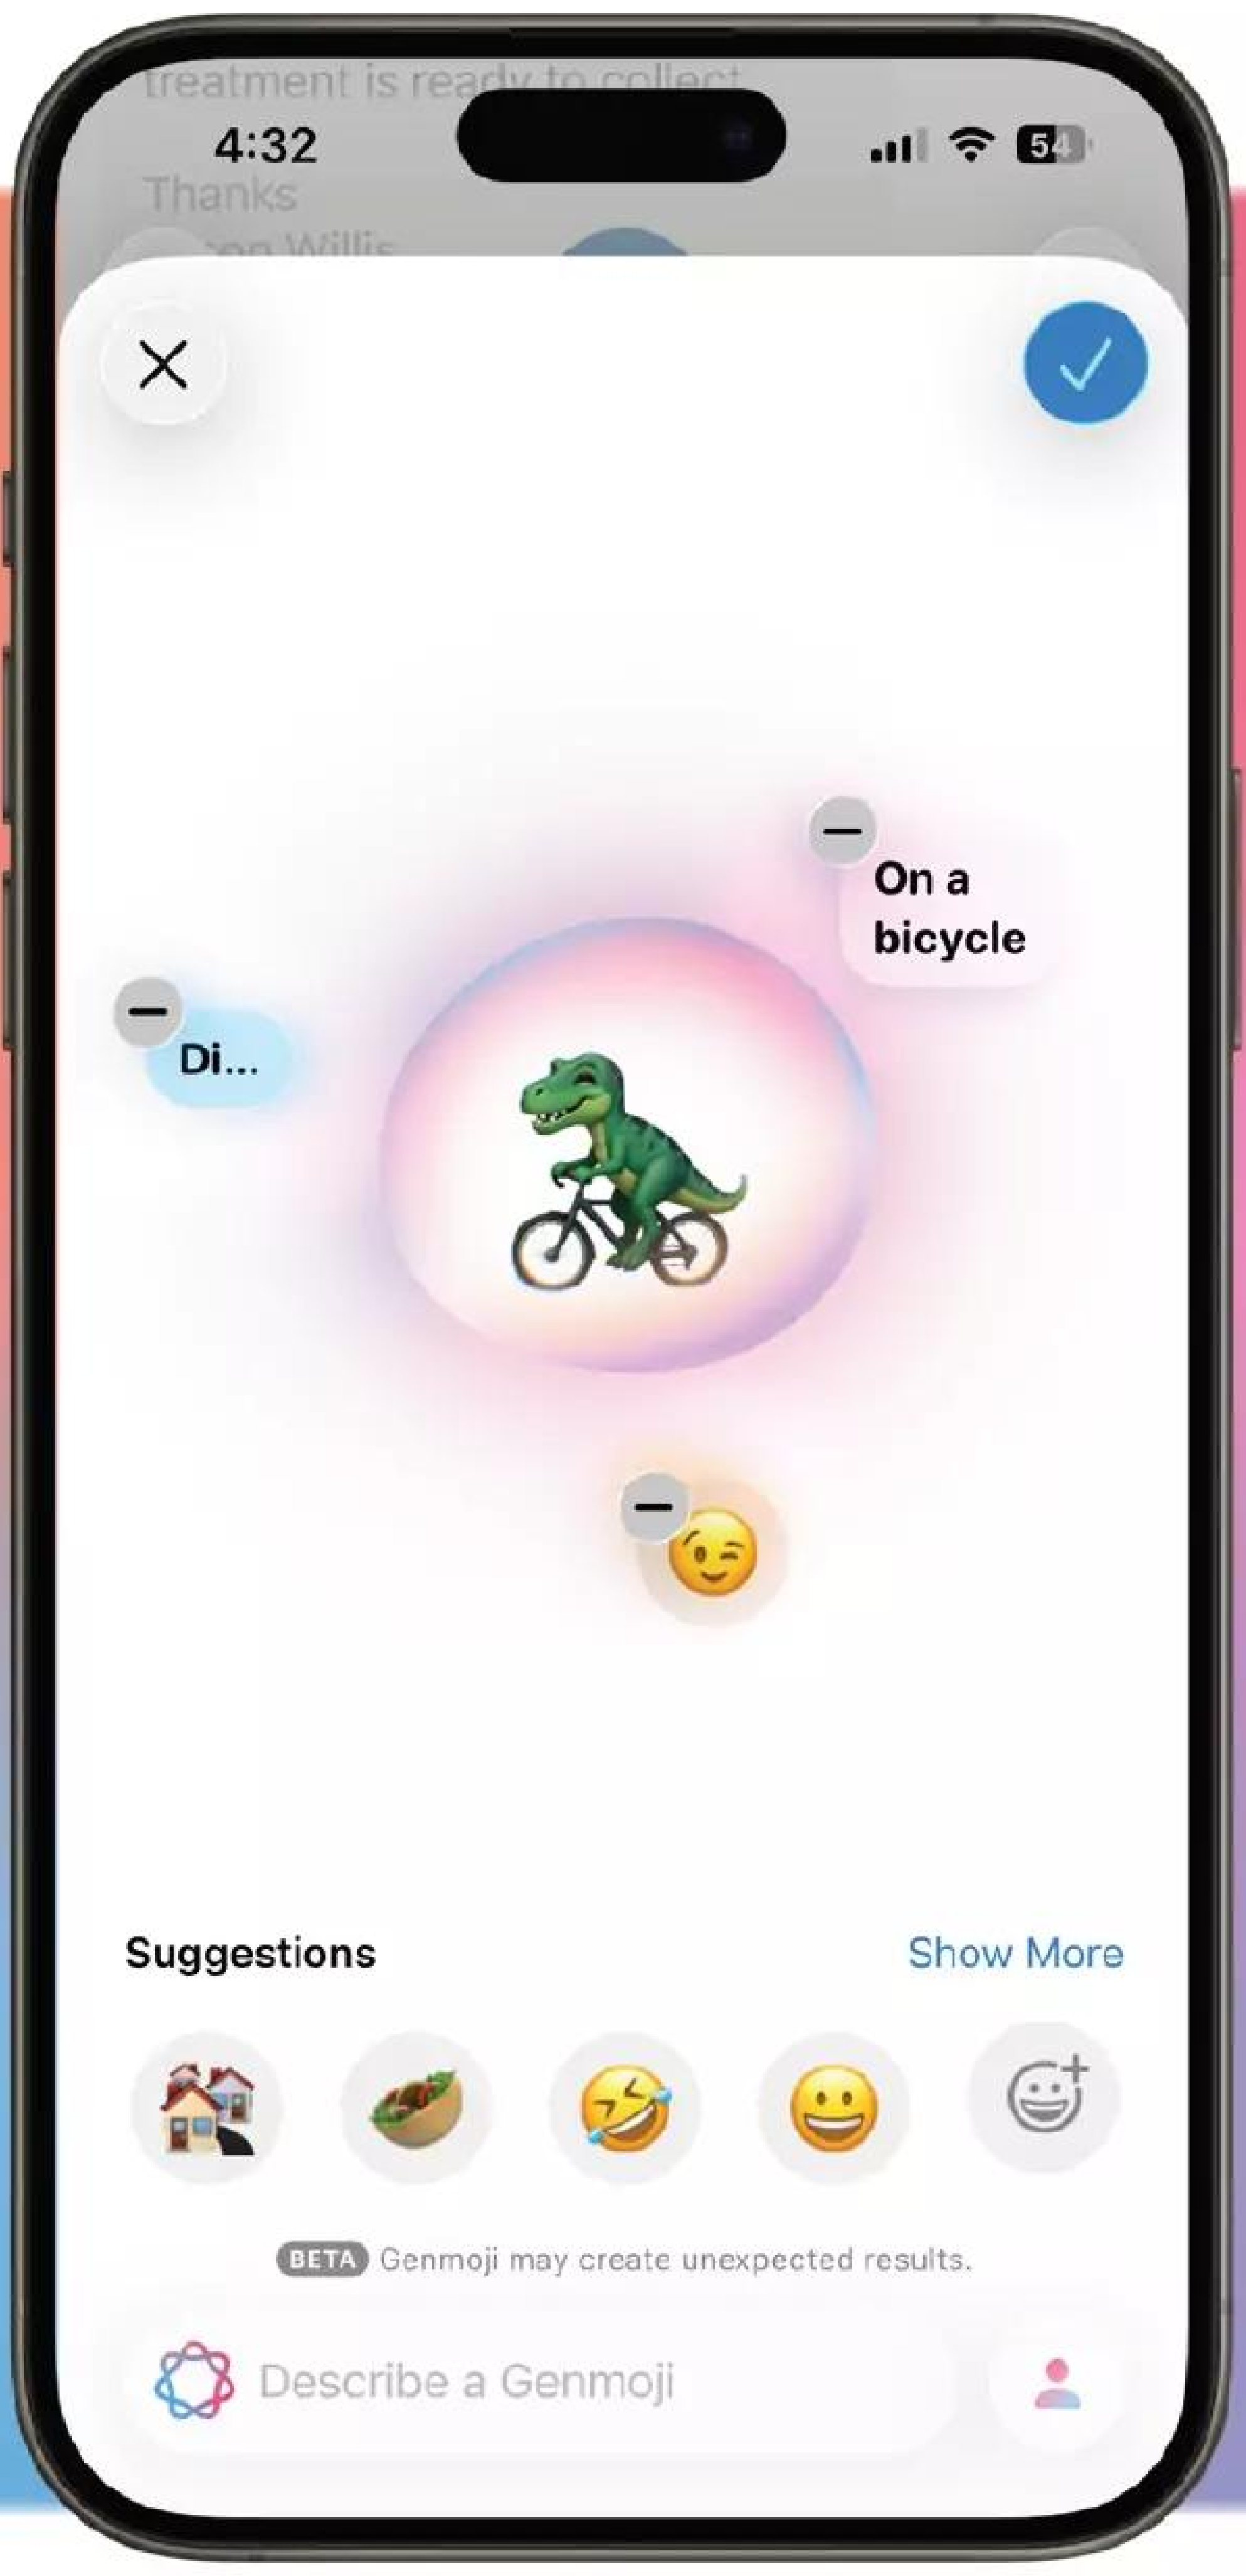


Listen my darling, add a pinch of vanilla and orange blossom water to the dough, that's my secret.

Language Translation translates communications so you can converse with people who don't speak your tongue.

Genmoji

Genmoji are custom emoji built with Apple Intelligence. If you can't find the emoji you want, make a new one. You can even design emoji based on your friends and family, using their photos for context. It's easy to do. If (for example) you want a Tyrannosaurus riding a bicycle while wearing a tutu, just ask for it, and Apple Intelligence makes an emoji or two. Choose the one you want, and use it.



Genmoji may create unexpected results.

Make custom emojis with Apple Intelligence Genmoji with just a few words.

Siri and Search

The greater understanding of language made possible by Apple Intelligence improves Siri and searches. You can use more natural language. For example, a search in Photos might say, 'Find all the pictures of my daughter with her face painted.' A Siri request could ask, 'Play the song Jim sent me'. Apple Intelligence's integration with the iPhone's apps means it knows who your daughter and 'Jim' are, and can analyse photos for painted faces and scan your Messages and Mail apps for the song in question. You can even get away with stumbling over your words, or hesitating as you speak. Siri still knows what you want and delivers.

Also, Apple is partnering with OpenAI to integrate the ChatGPT platform into Siri. If you ask Apple's personal assistant to write a long piece of text or create a specific image, the request can be forwarded to ChatGPT's servers, which can go above and beyond what Siri can do natively. Using ChatGPT is opt-in, with Siri always asking permission before doing so. If you don't want your requests to go to someone else's servers, you don't have to.

Siri searches can be far more natural with Apple Intelligence.

Images

Apple Intelligence is great for creating original images. For example, if you wish a friend a happy birthday, you can have Apple Intelligence create a birthday image based on the photo you have on their Contacts card. Images can be created in three styles; Sketch, Illustration and Animation. This feature is built into apps throughout the system, such as Messages, Notes, Freeform, Pages and more. There's also a new app called Image Playground, where you can build images for fun.

Apple Intelligence will also make new editing options possible in the Photos app. For example, you can use it to remove objects from your pictures, with the background filled in automatically.

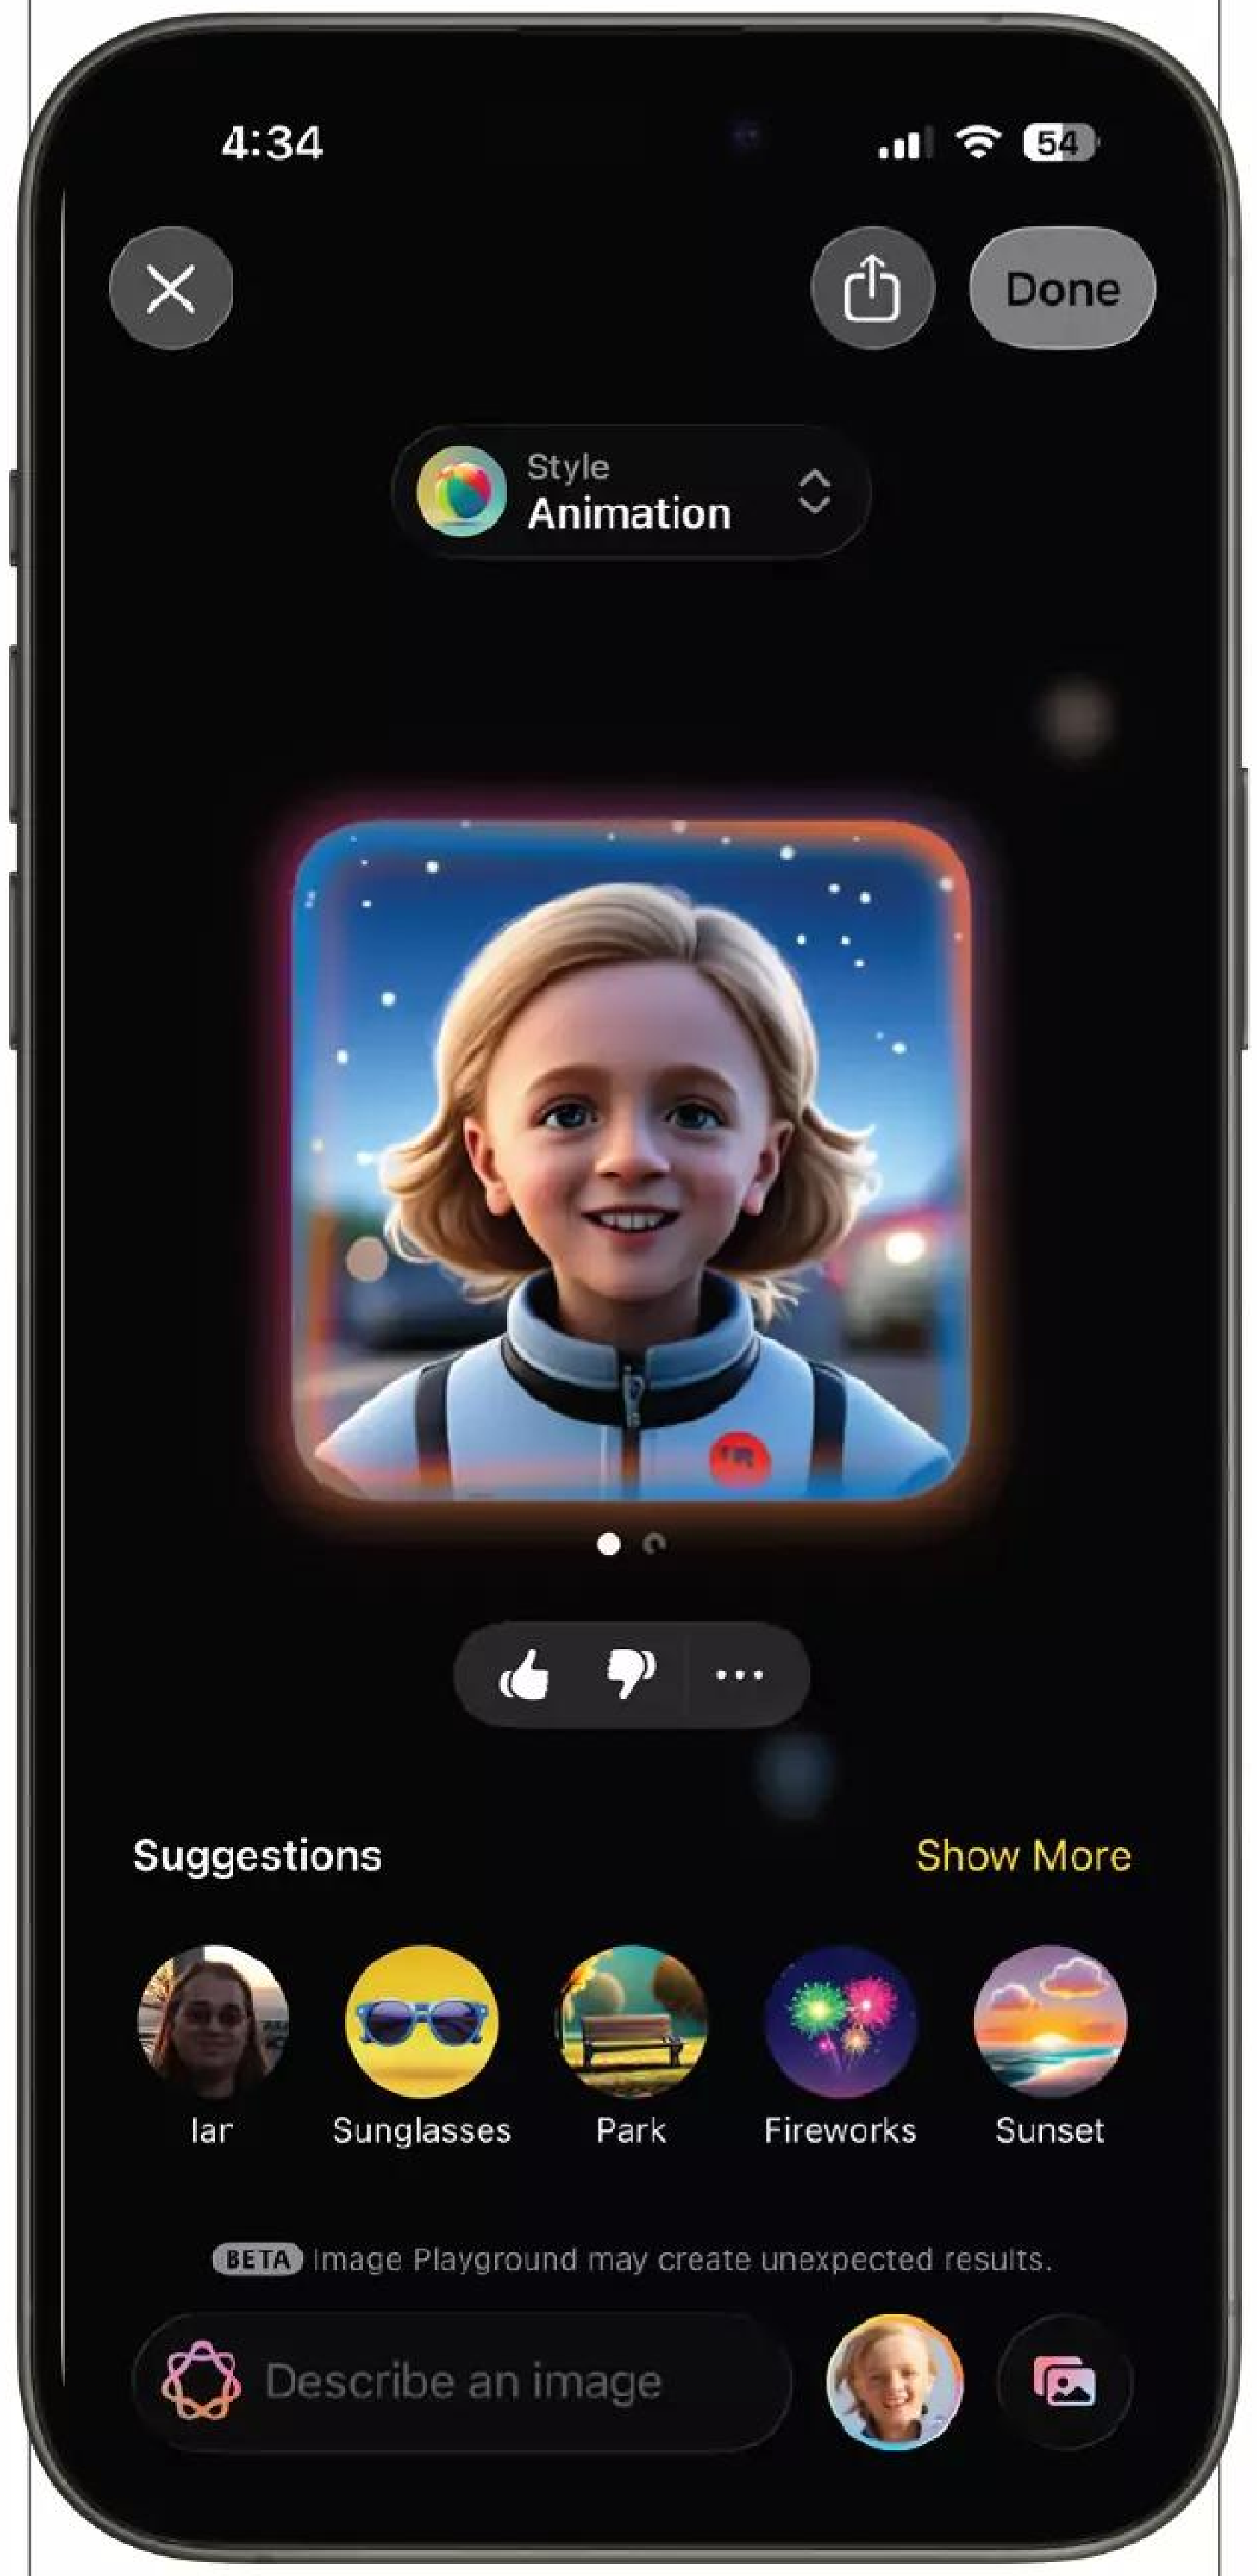


Image Playground may create unexpected results.

Create an Apple Intelligence birthday image based on your friend's photo.

Apple Intelligence Settings

Like most things on your iPhone, Apple Intelligence has its own settings, where you can modify and customise how the feature works.

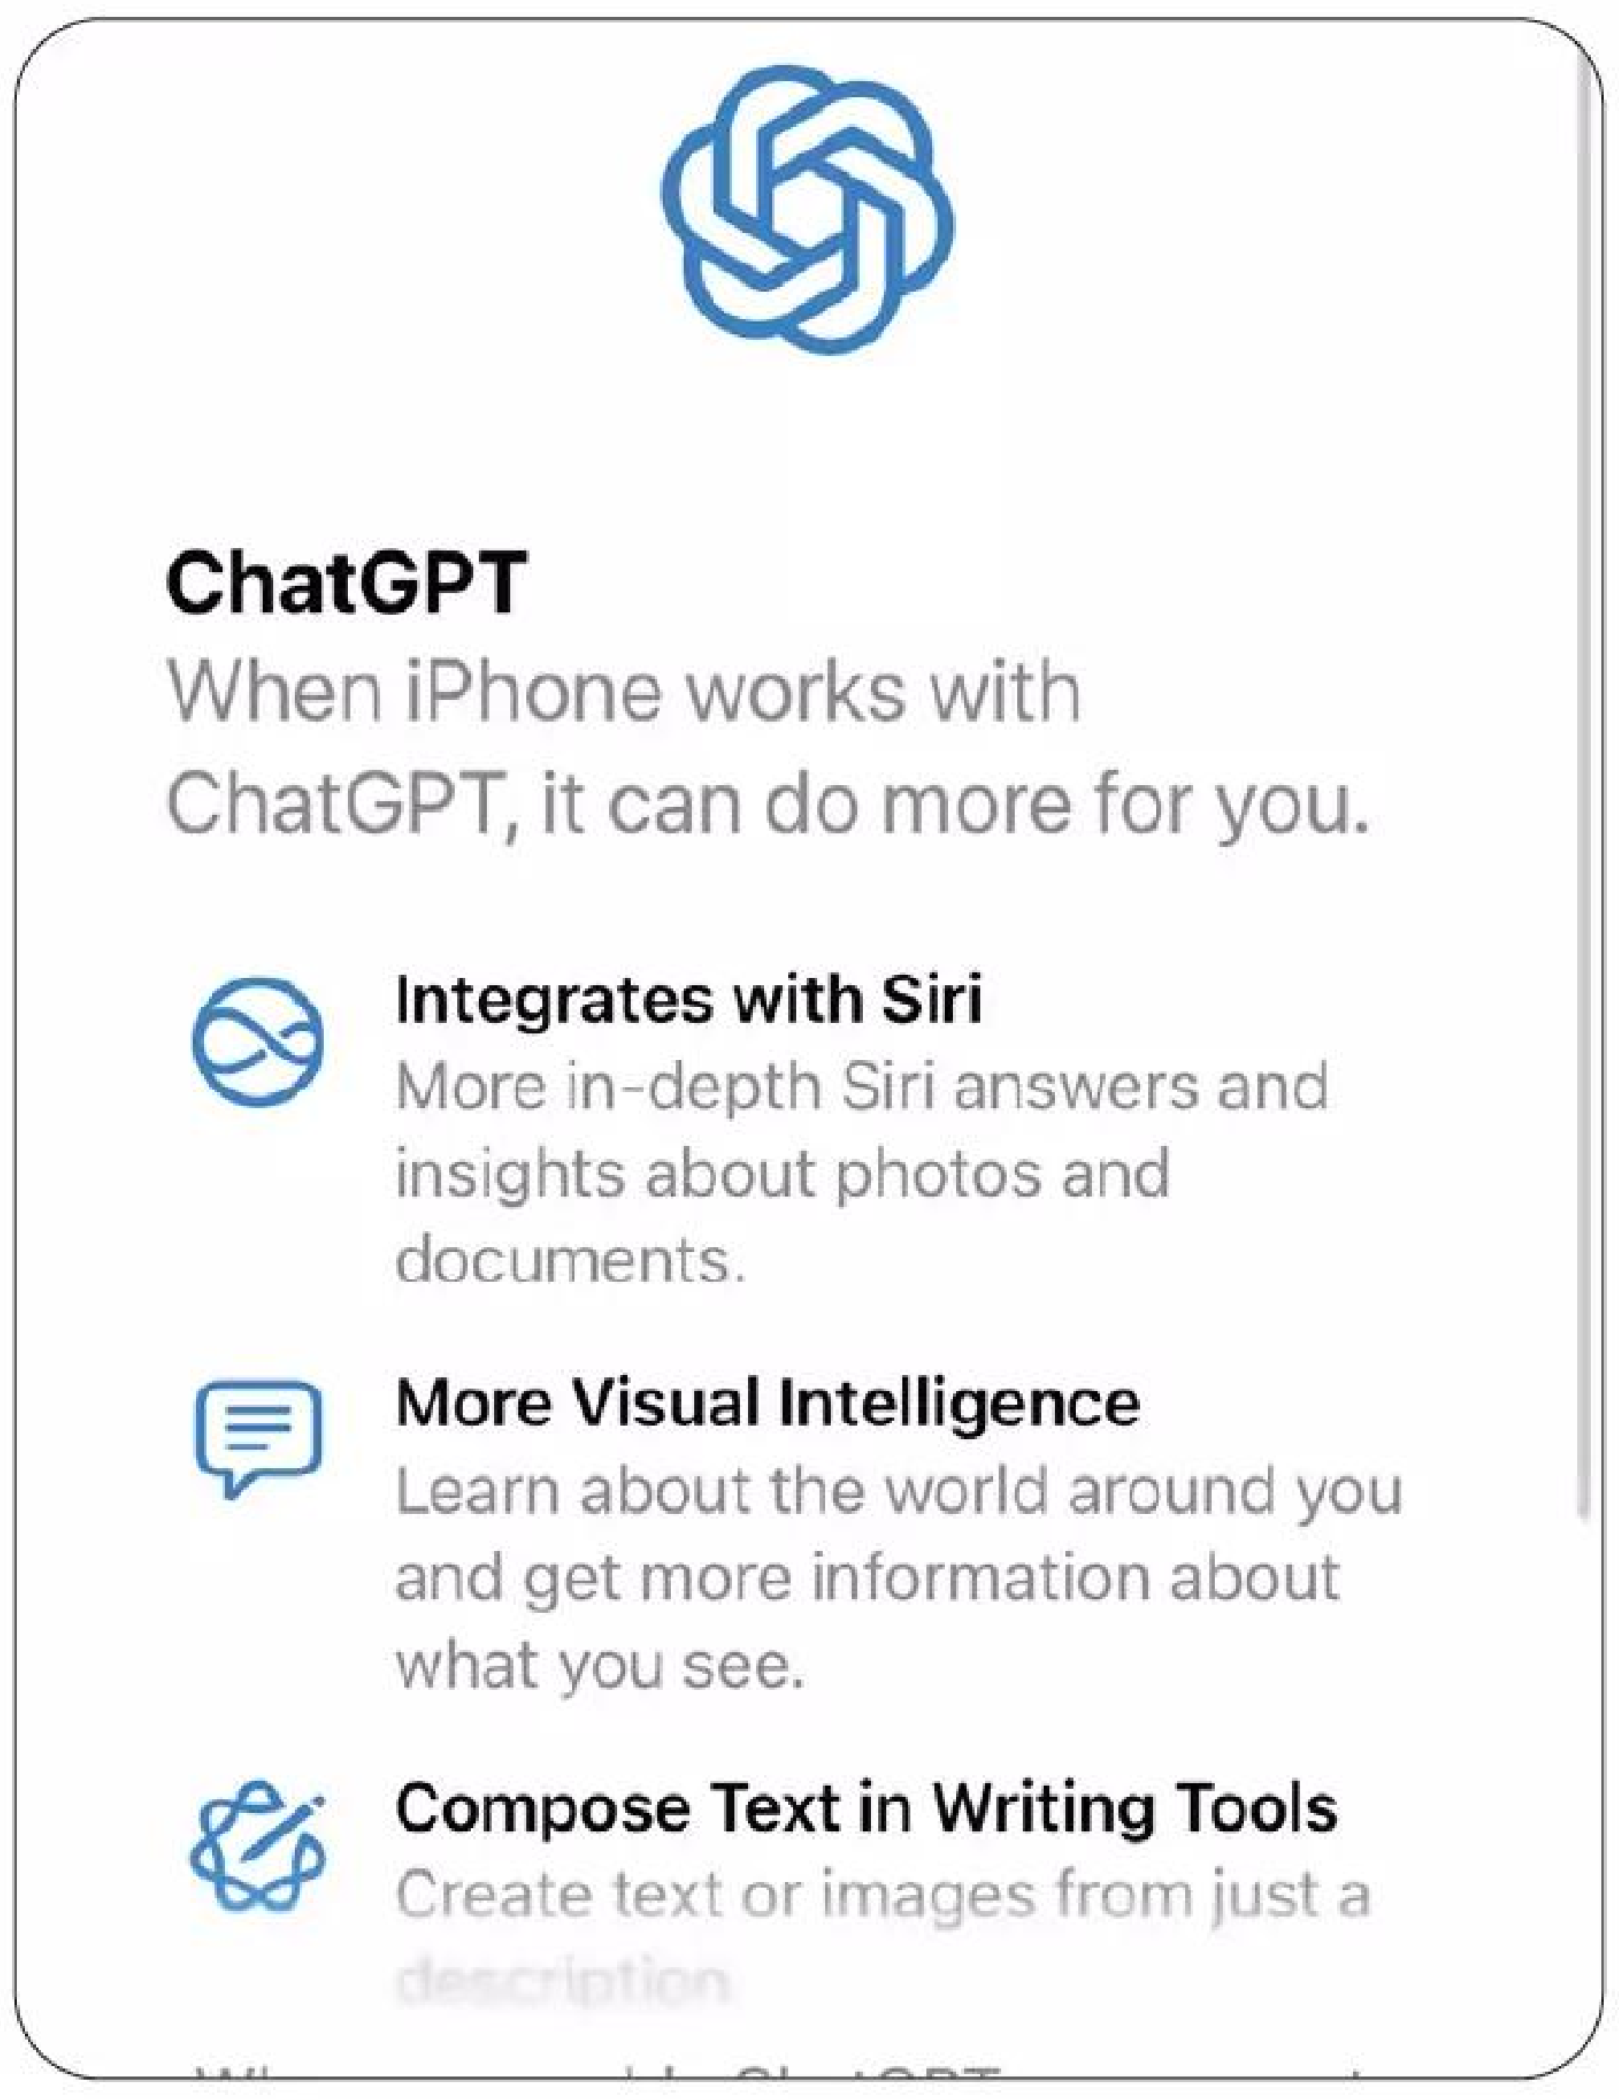
5 If you don't get the response you wanted from Siri, try using ChatGPT. Make your request again, prefixing it with 'Use ChatGPT to...'



ChatGPT

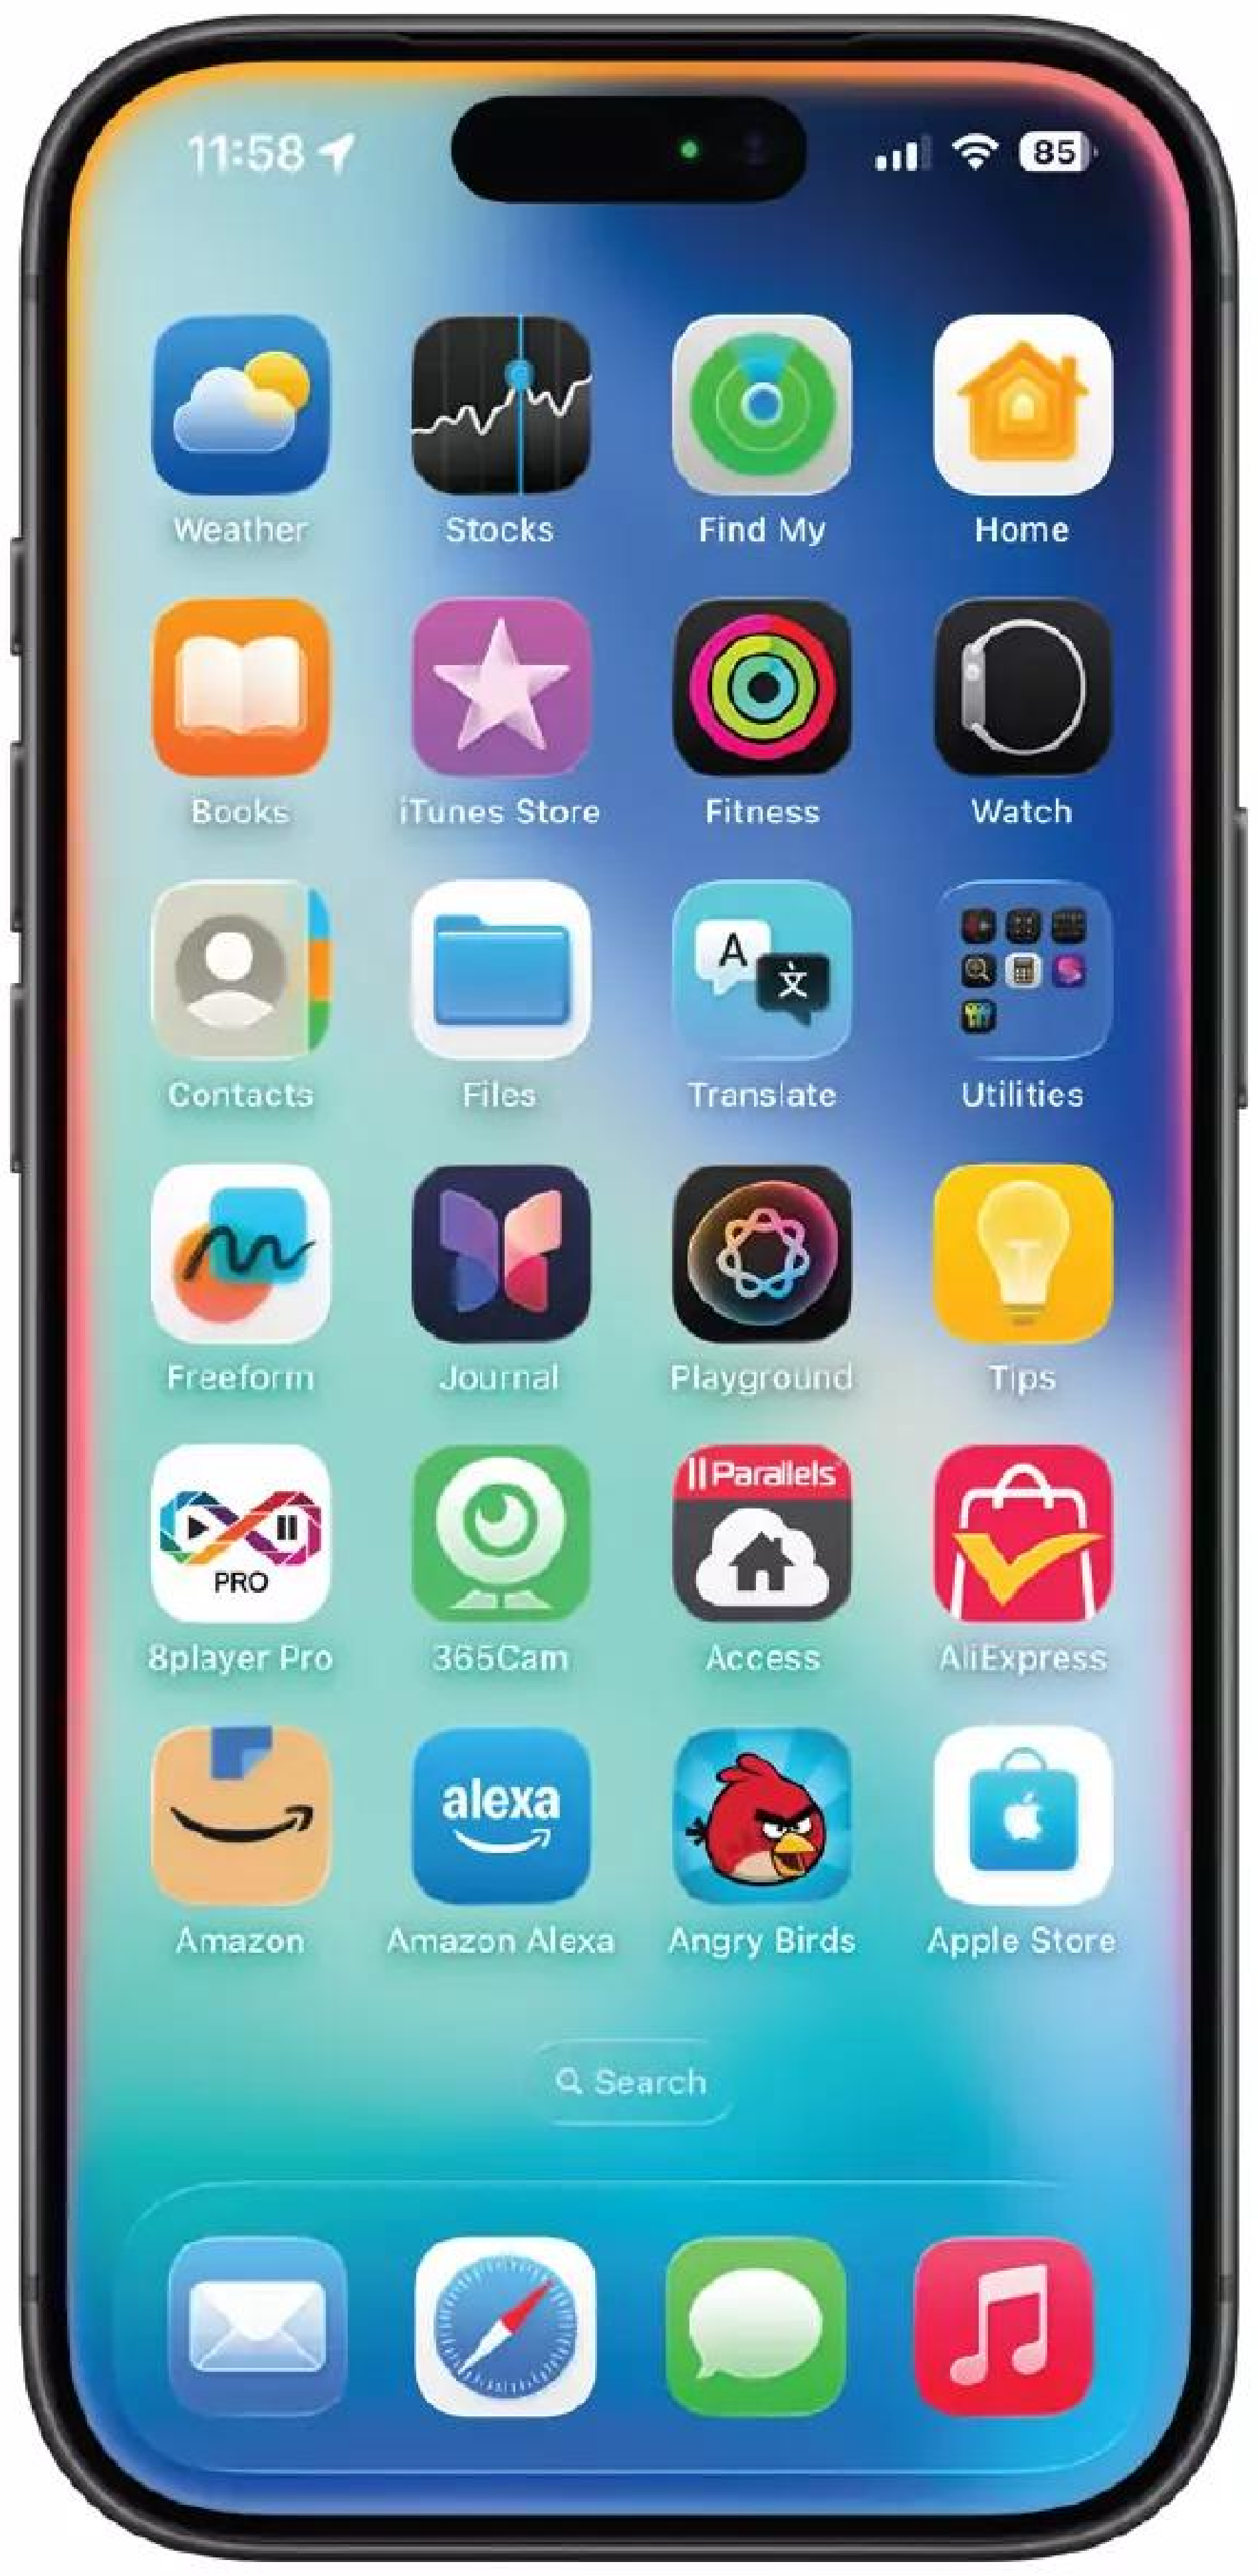
When iPhone works with ChatGPT, it can do more for you.

Integrates with Siri
More in-depth Siri answers and insights about photos and documents.

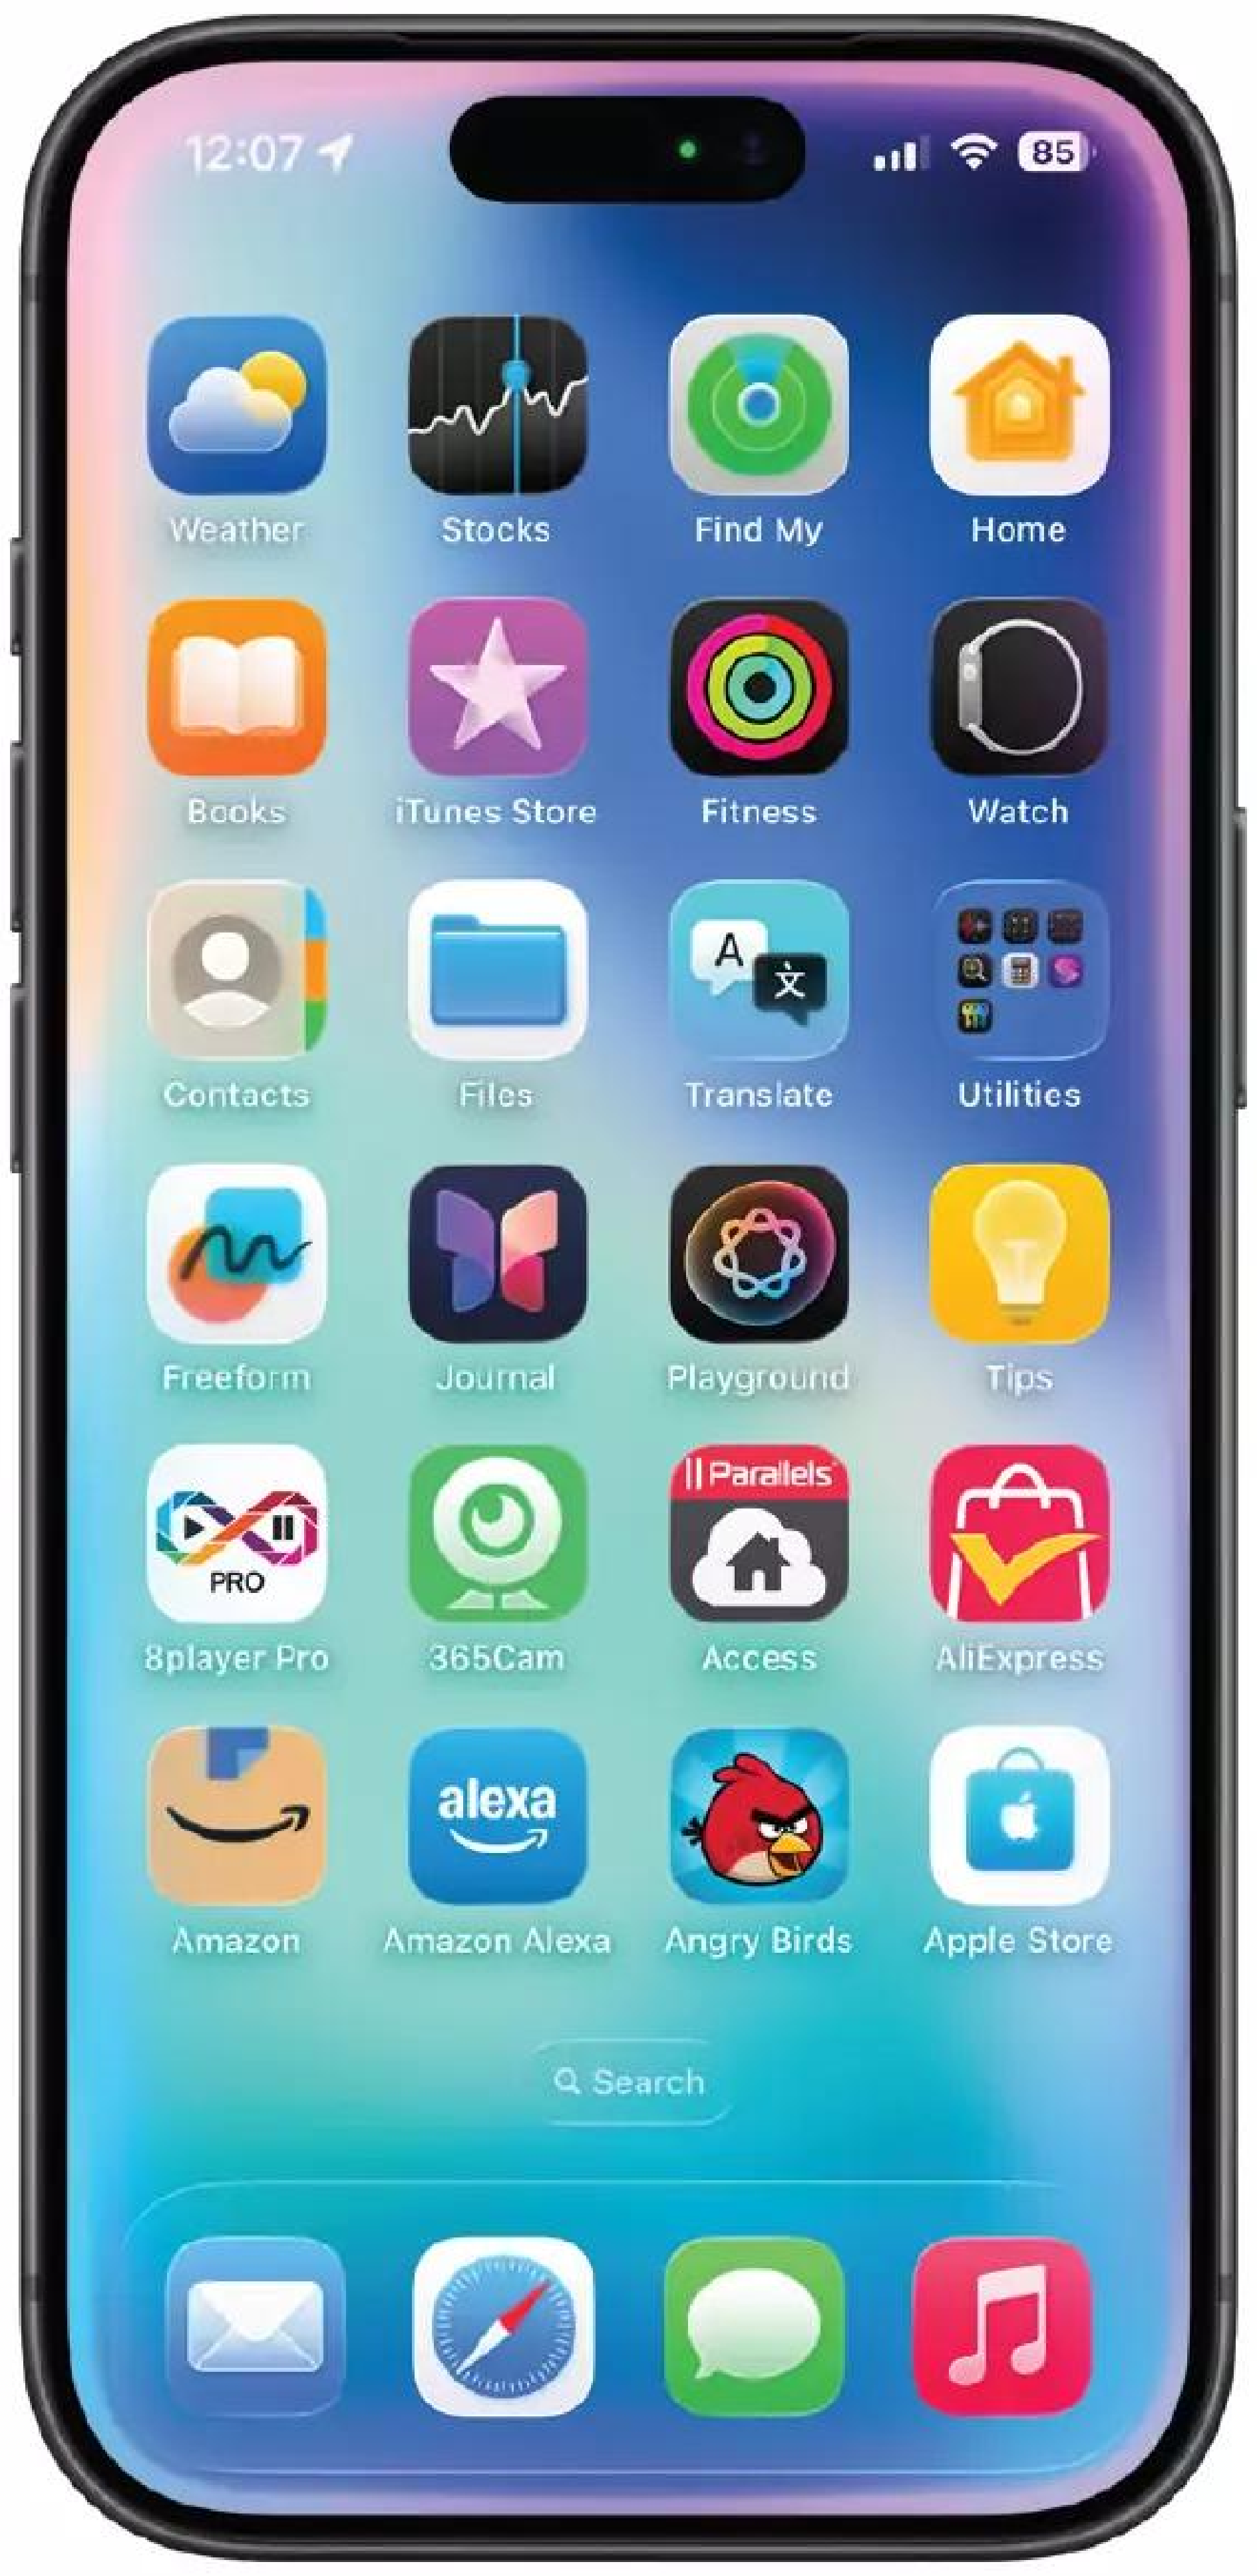
More Visual Intelligence
Learn about the world around you and get more information about what you see.

Compose Text in Writing Tools
Create text or images from just a description.

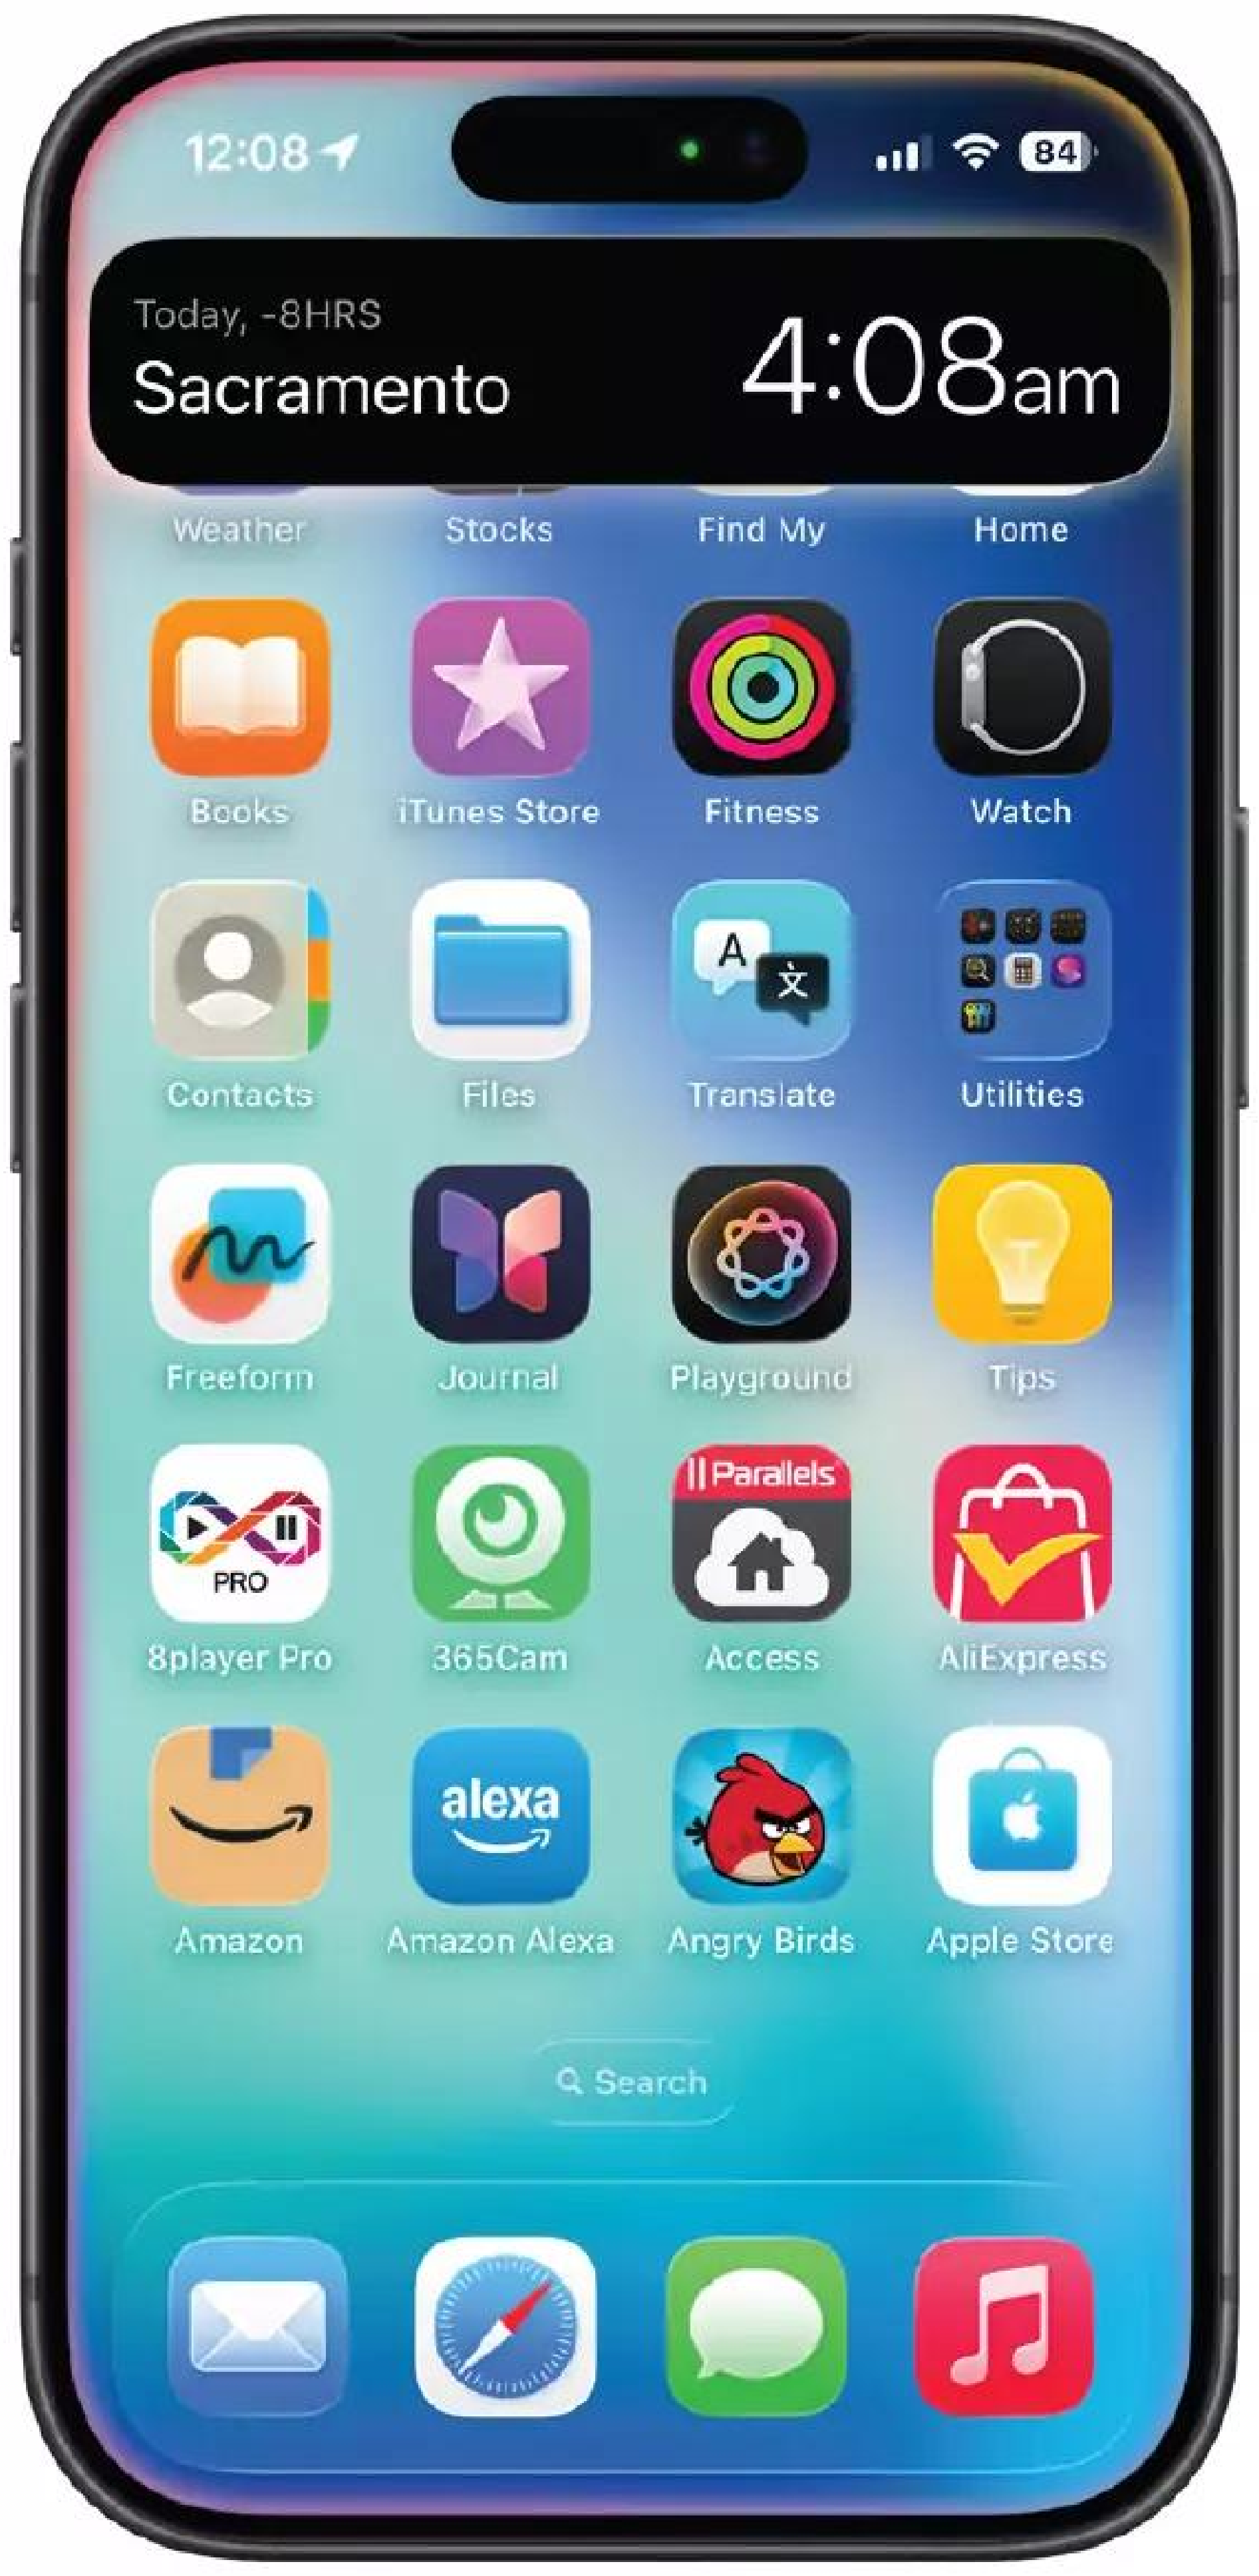
6 When invited to enable ChatGPT, tap Get Started and follow the on-screen instructions. ChatGPT is only used in Siri with your permission.



1 To open Siri, hold down the Side button or the Home button on older iPhones. Siri now appears all around the screen, as you can see here.



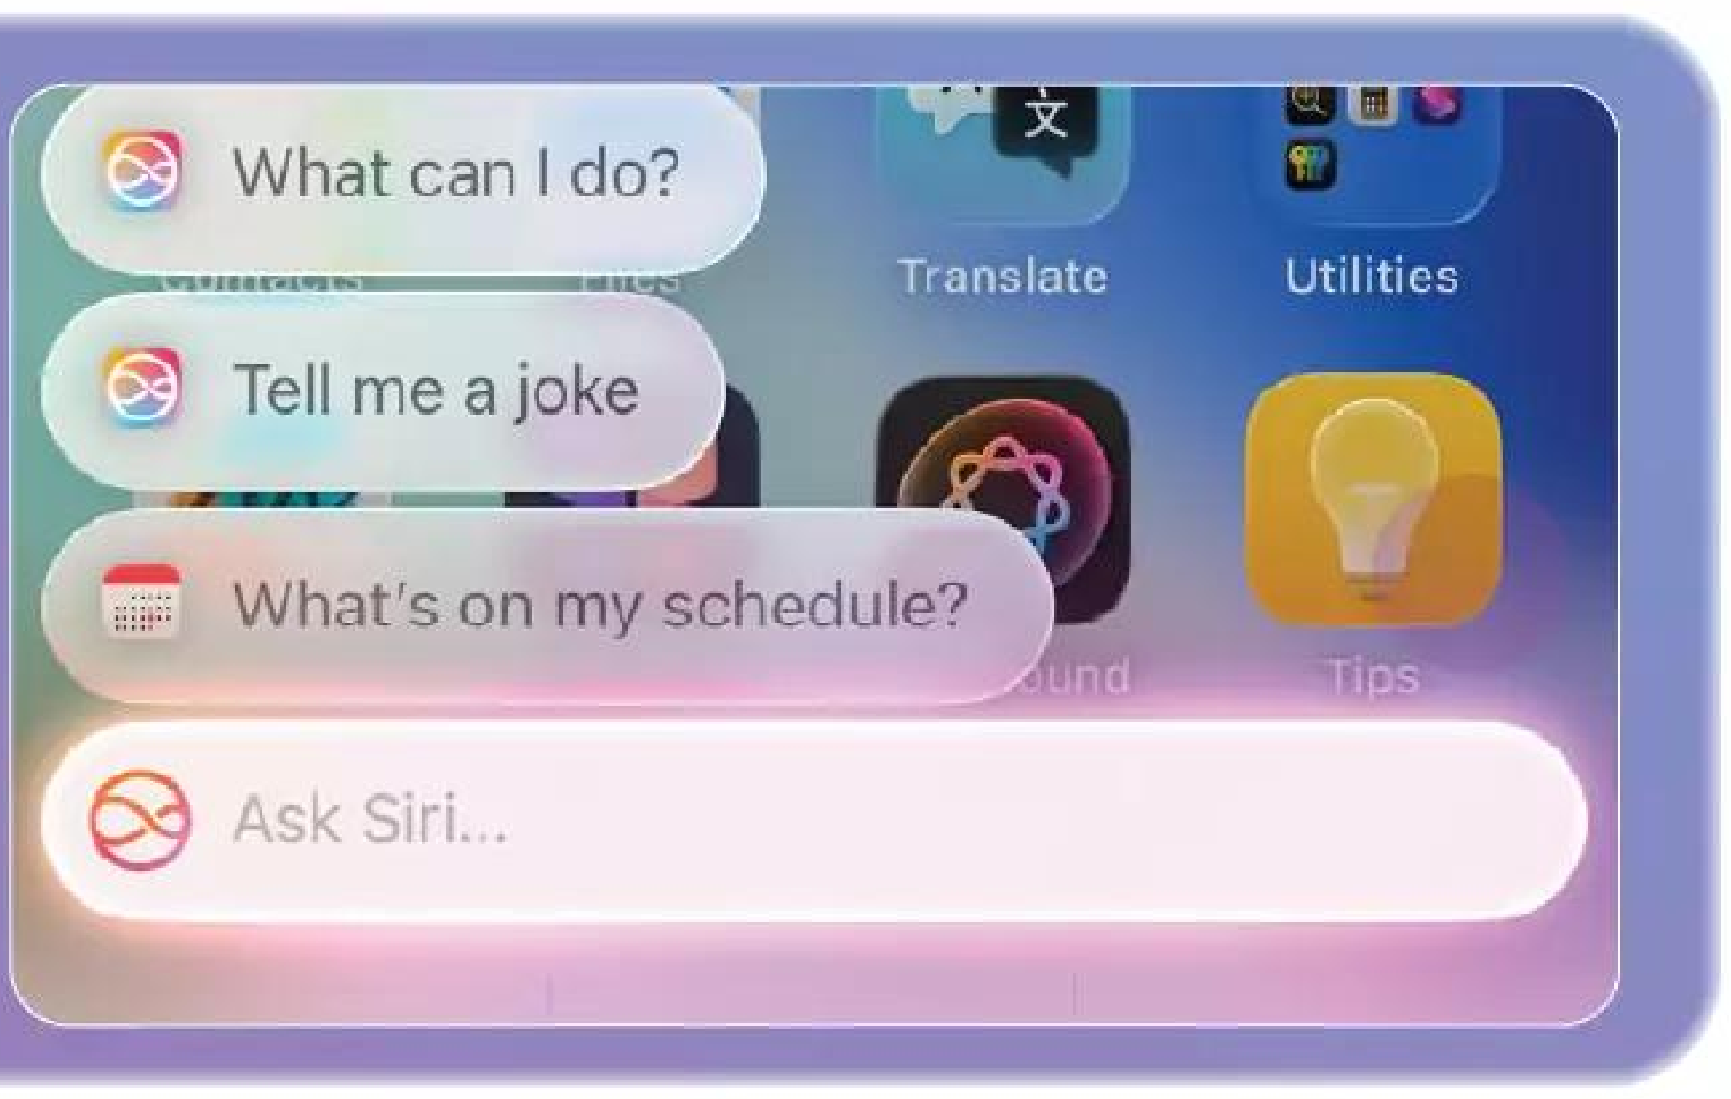
2 Begin speaking and the coloured border reverberates to let you know that Siri can hear you. If it doesn't, tap it to talk to Siri again.



3 You can also access Siri by saying "Siri" or "Hey Siri" and then speaking your request. Tap the answer shown to open the app that created it.

Additional Apple Intelligence features

If you have an iPhone powerful enough to benefit from Apple Intelligence, Siri becomes more 'natural, relevant and personal'. Richer language understanding allows you to speak to Siri more naturally, with the assistant even understanding a request if you stumble over your words. Look out too for Type to Siri. Double-tap the foot of the screen without summoning Siri first. Siri activates and the keyboard appears so you can type a message instead of speaking it.



"Siri has been enhanced with Apple Intelligence. The AI powered interface is more intuitive and its understanding of user input has improved. Users can now engage in text conversations by double-tapping the home bar on iOS and iPadOS. This eliminates the need to open the Accessibility menu. The enhancements are designed to make Siri's conversations more natural by utilising device data. Additionally, Siri can now assist with device management and will receive further support through the Siri App Intents API. Furthermore, Siri will provide personalised advice based on device activity.

Check appointments

Siri can tell you if you have any appointments on any particular date, or even within a time frame. Say to Siri something like "What's my schedule for April?" and it tells you how many appointments you have in that month and lists them on screen. If you want to be more specific, say "What are my appointments today?" or "What's my schedule for June 19th?"

Identify a song

Siri is not only there to search for content on the web, it also lets you identify a song using the Shazam audio recognition software. While a song is playing, activate Siri and ask, "What is this song?" Siri searches, finds the title and then links you to its entry in iTunes to give you the chance to buy it.

Siri dictation commands

Siri also understands dictation as well as words, so if you are dictating an email, for instance, here is a useful list of dictation commands.

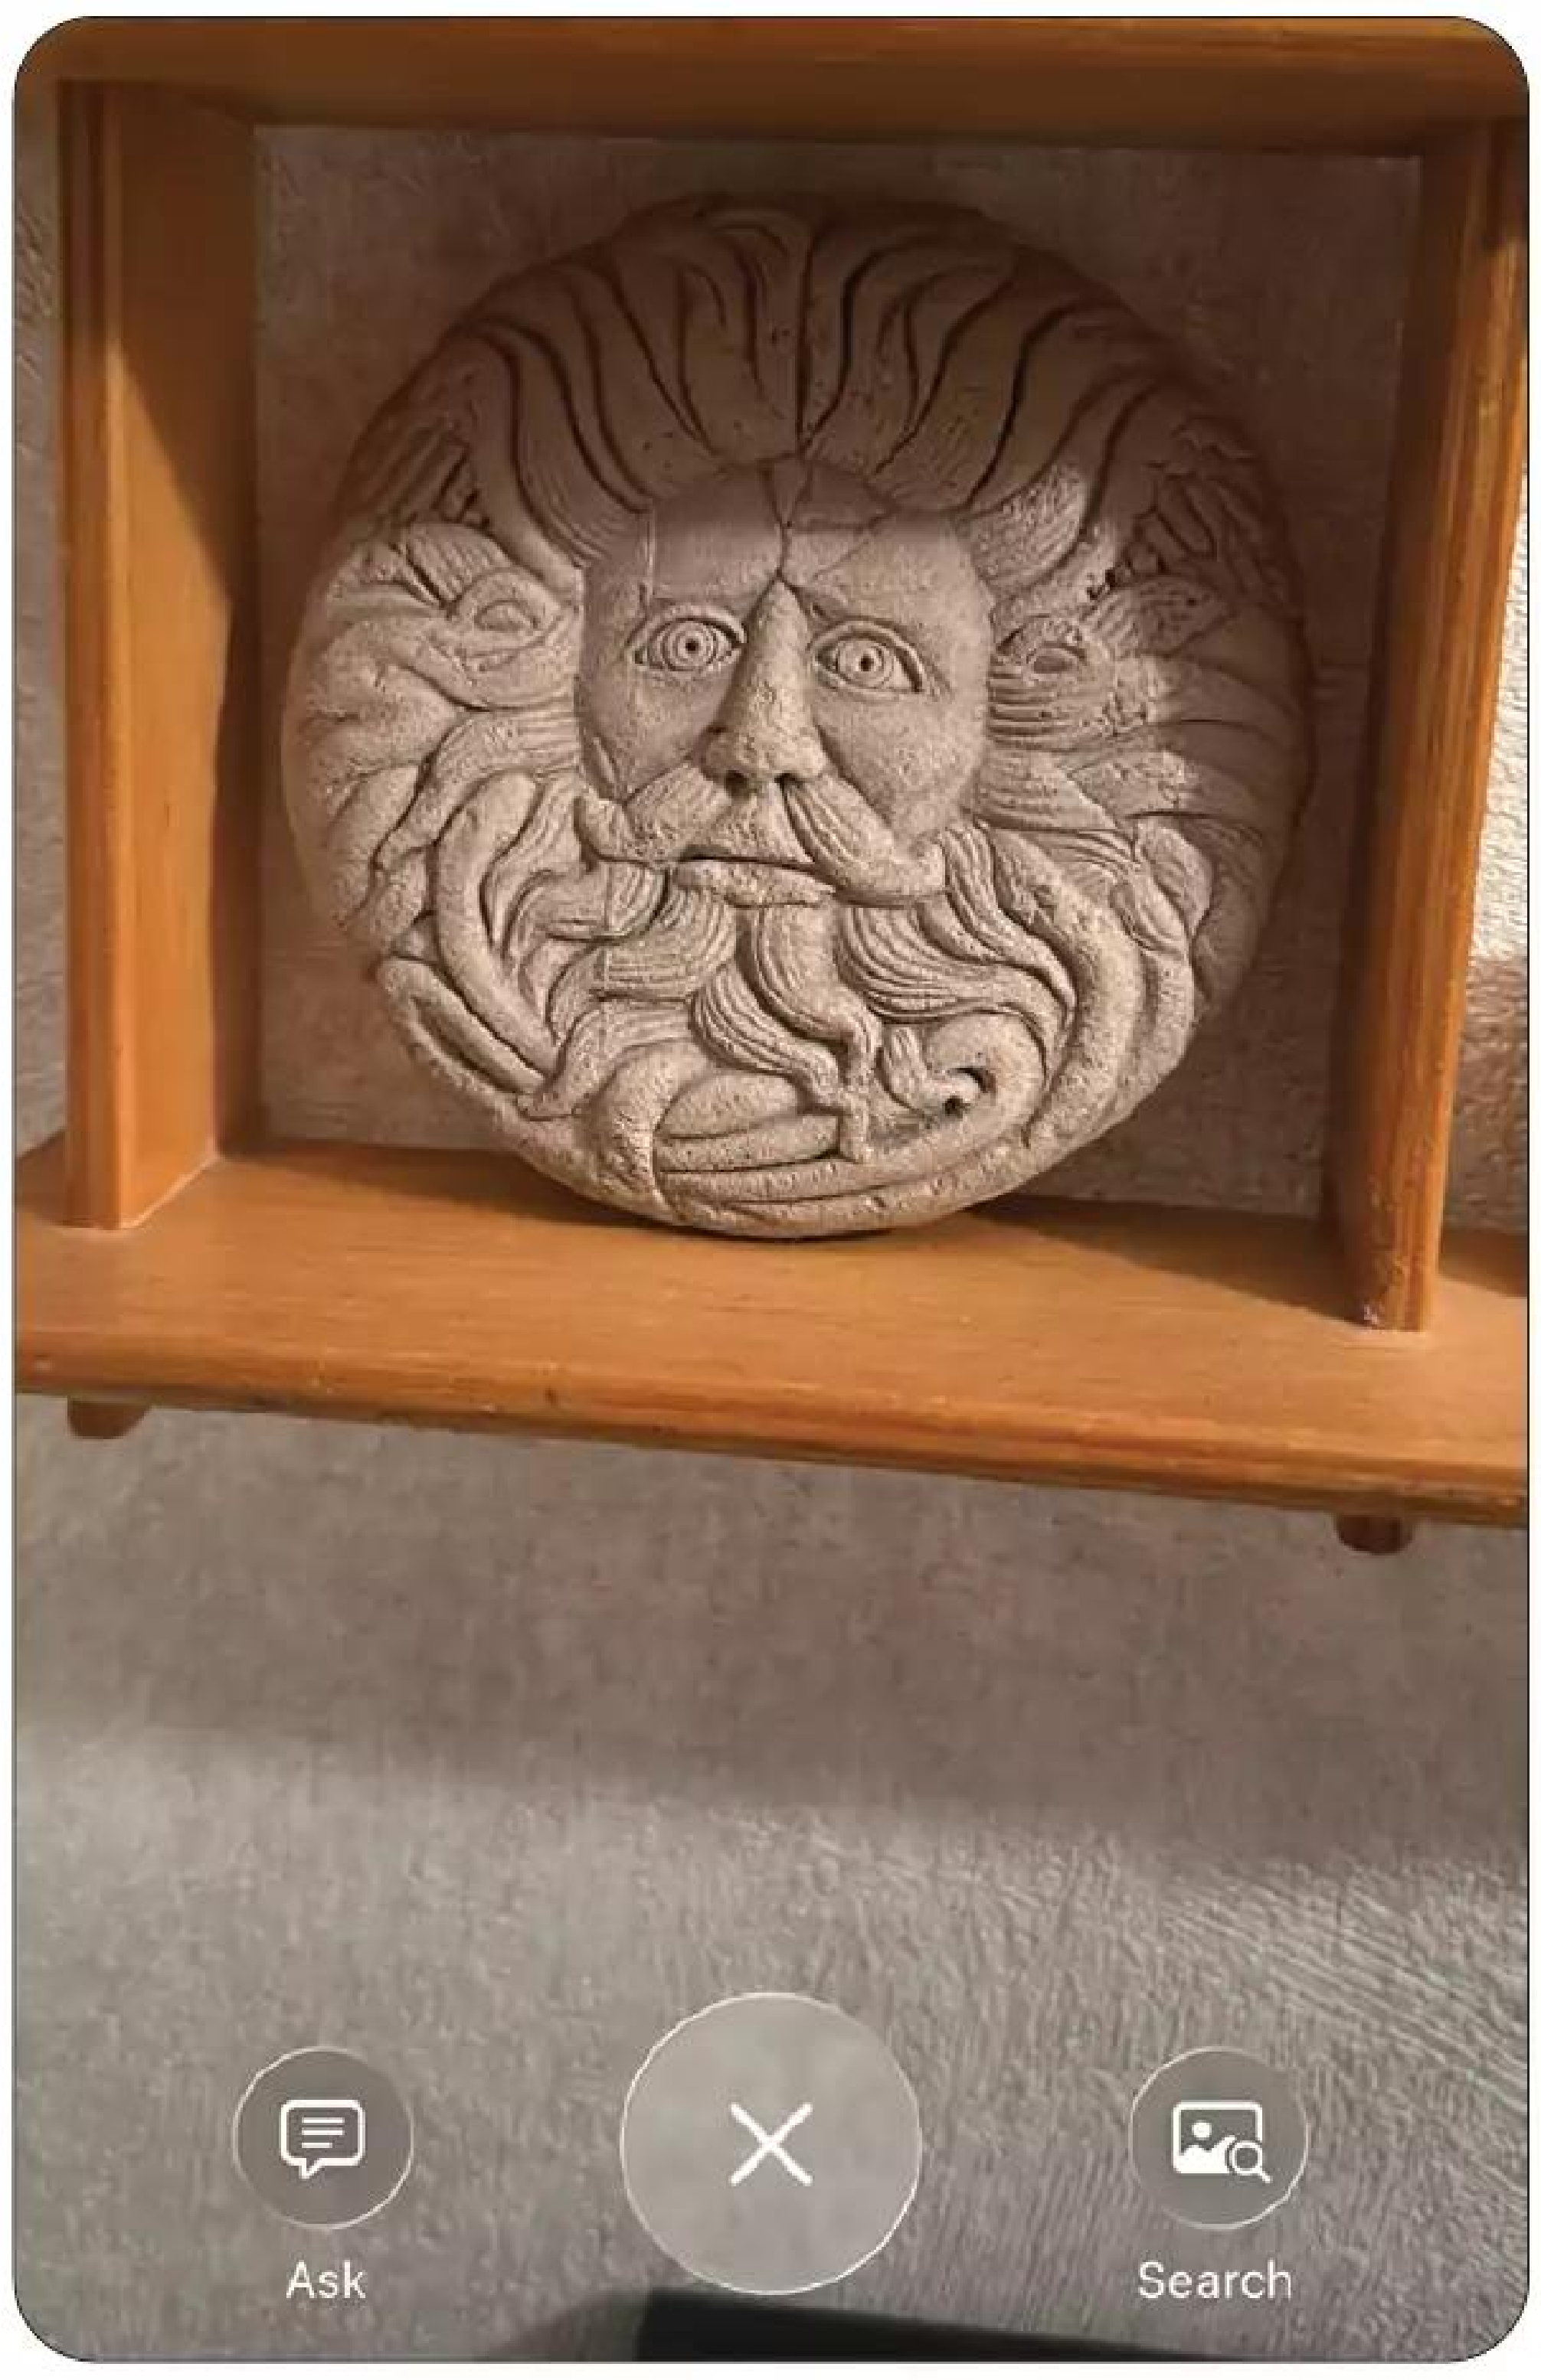
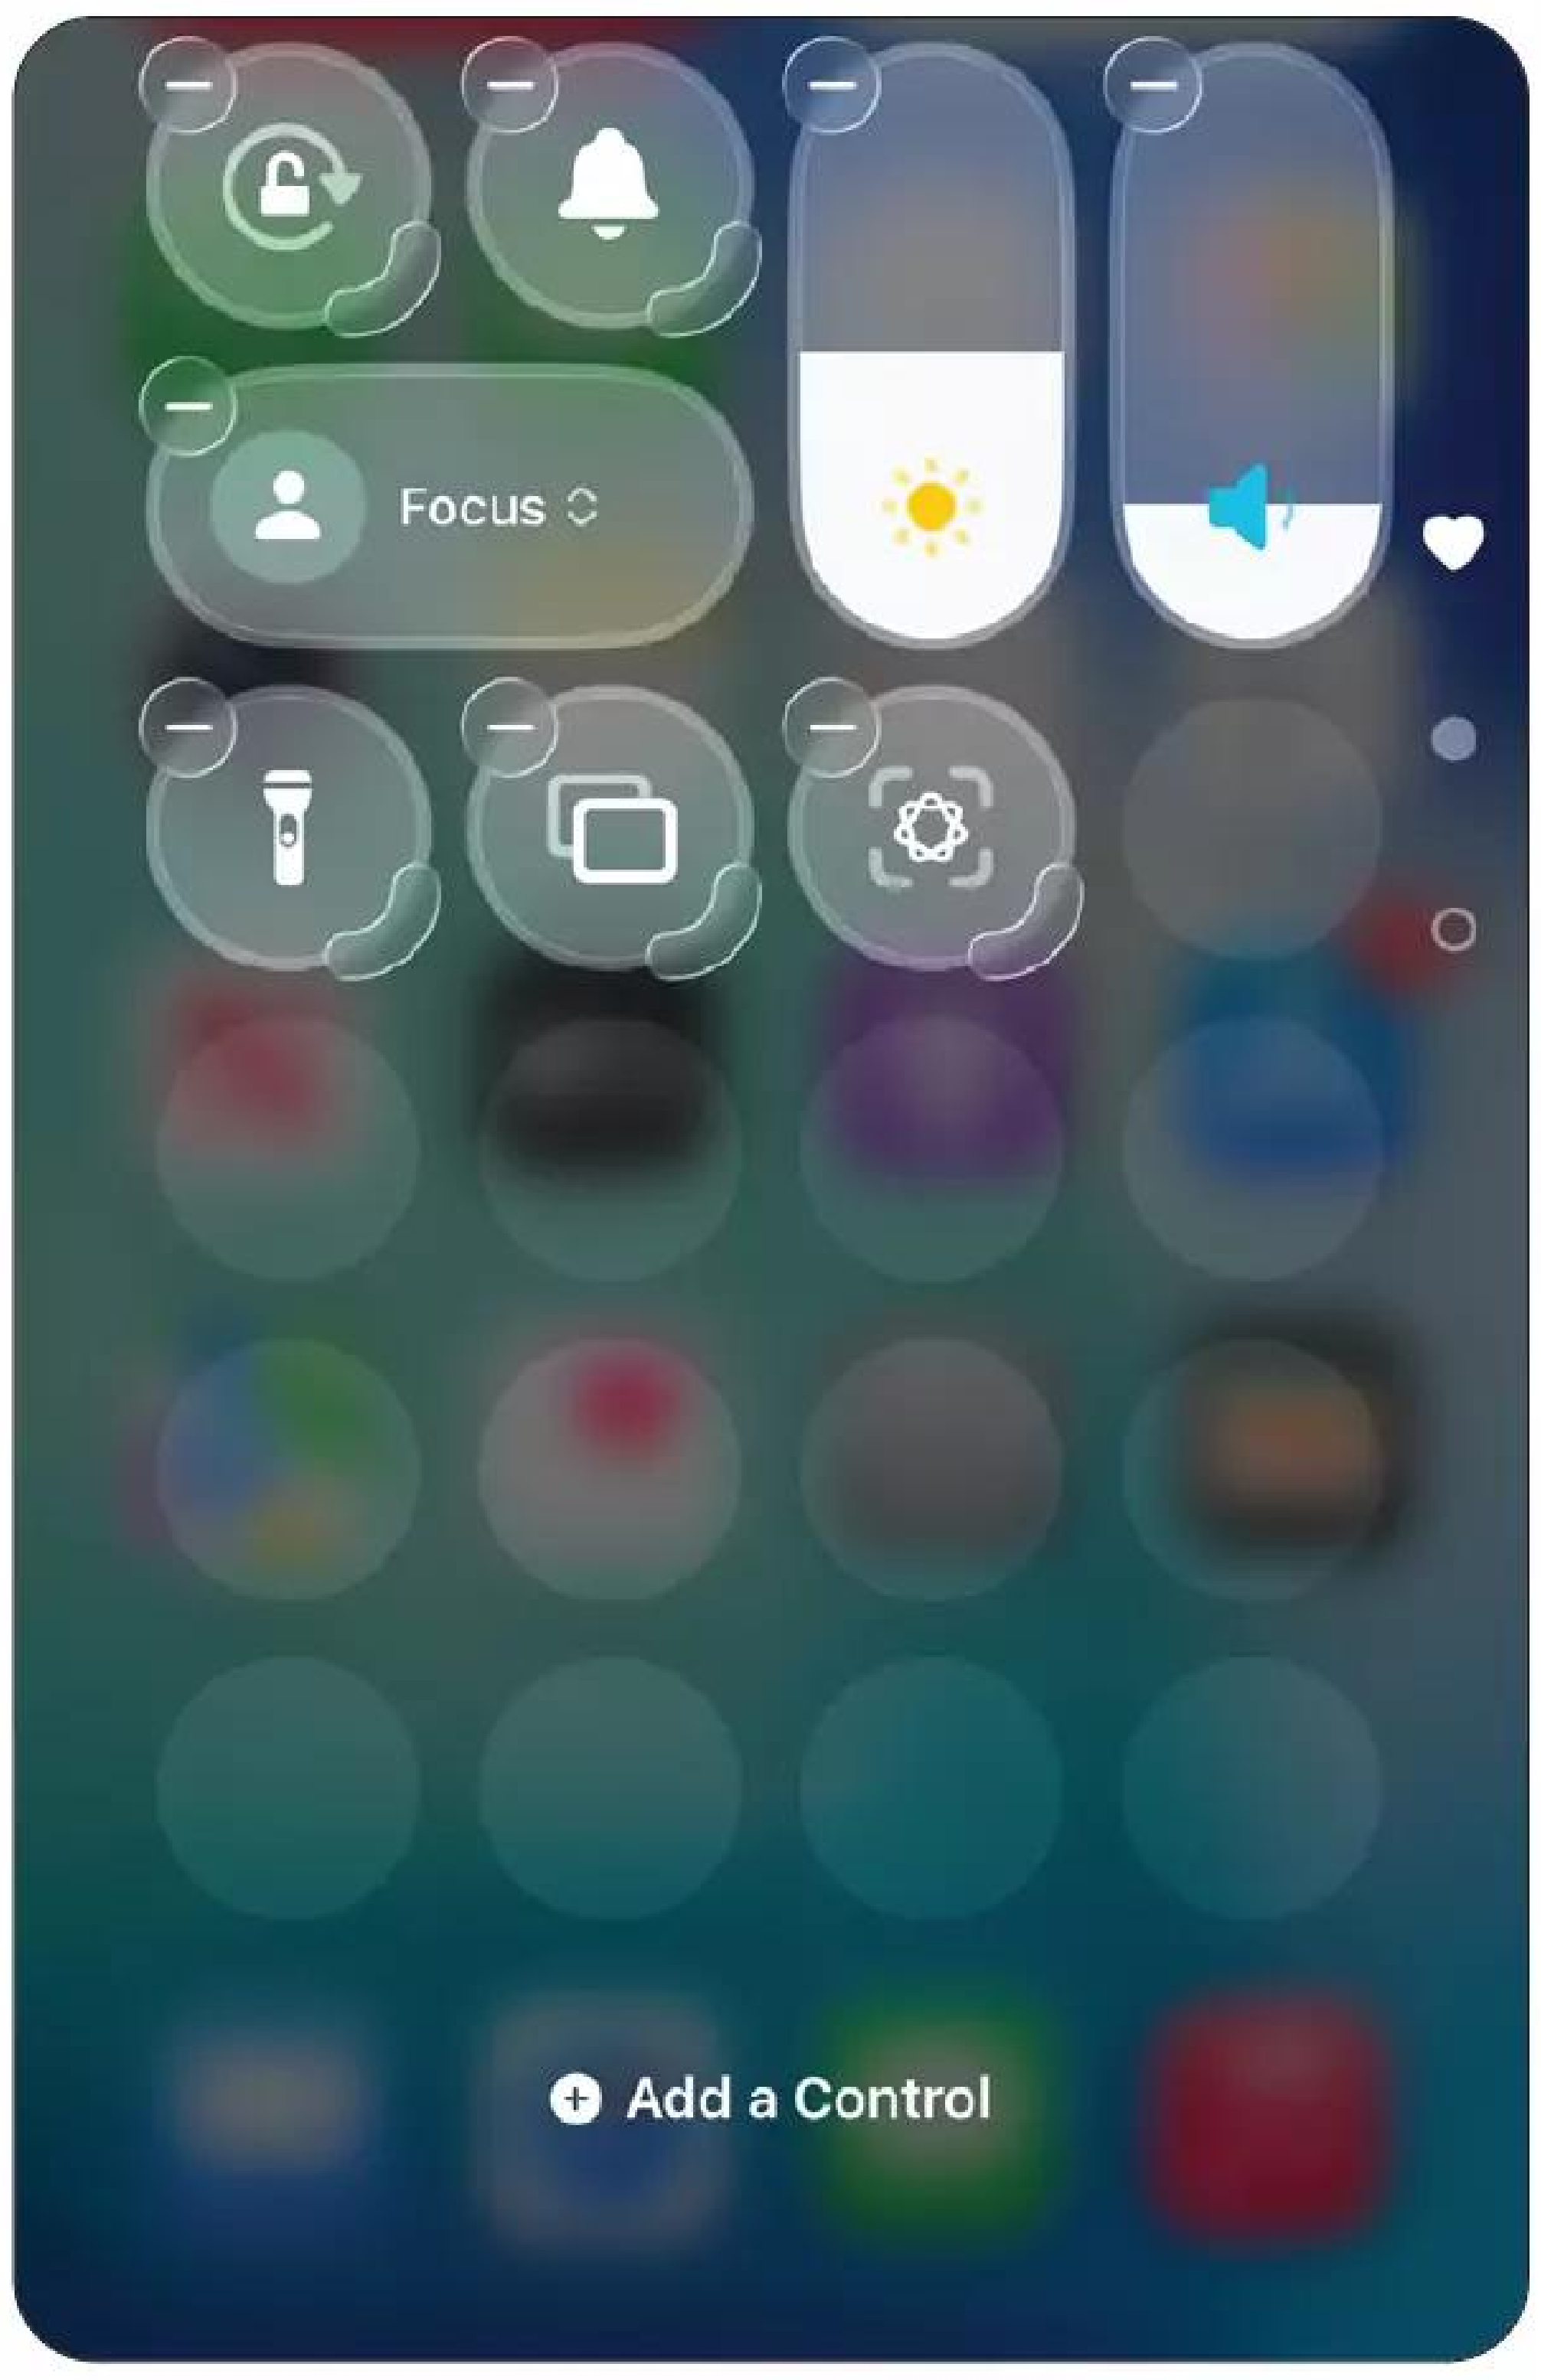
Visual intelligence On The iPhone

It's amazing what you can do with the Visual Intelligence feature, which is powered by Apple Intelligence. If you see something you like, you can screenshot it and use Visual Intelligence to look it up on the Internet. It can summarise text, turn a poster into a Calendar event, give you information on local businesses and more. Here's how...

Using Visual Intelligence

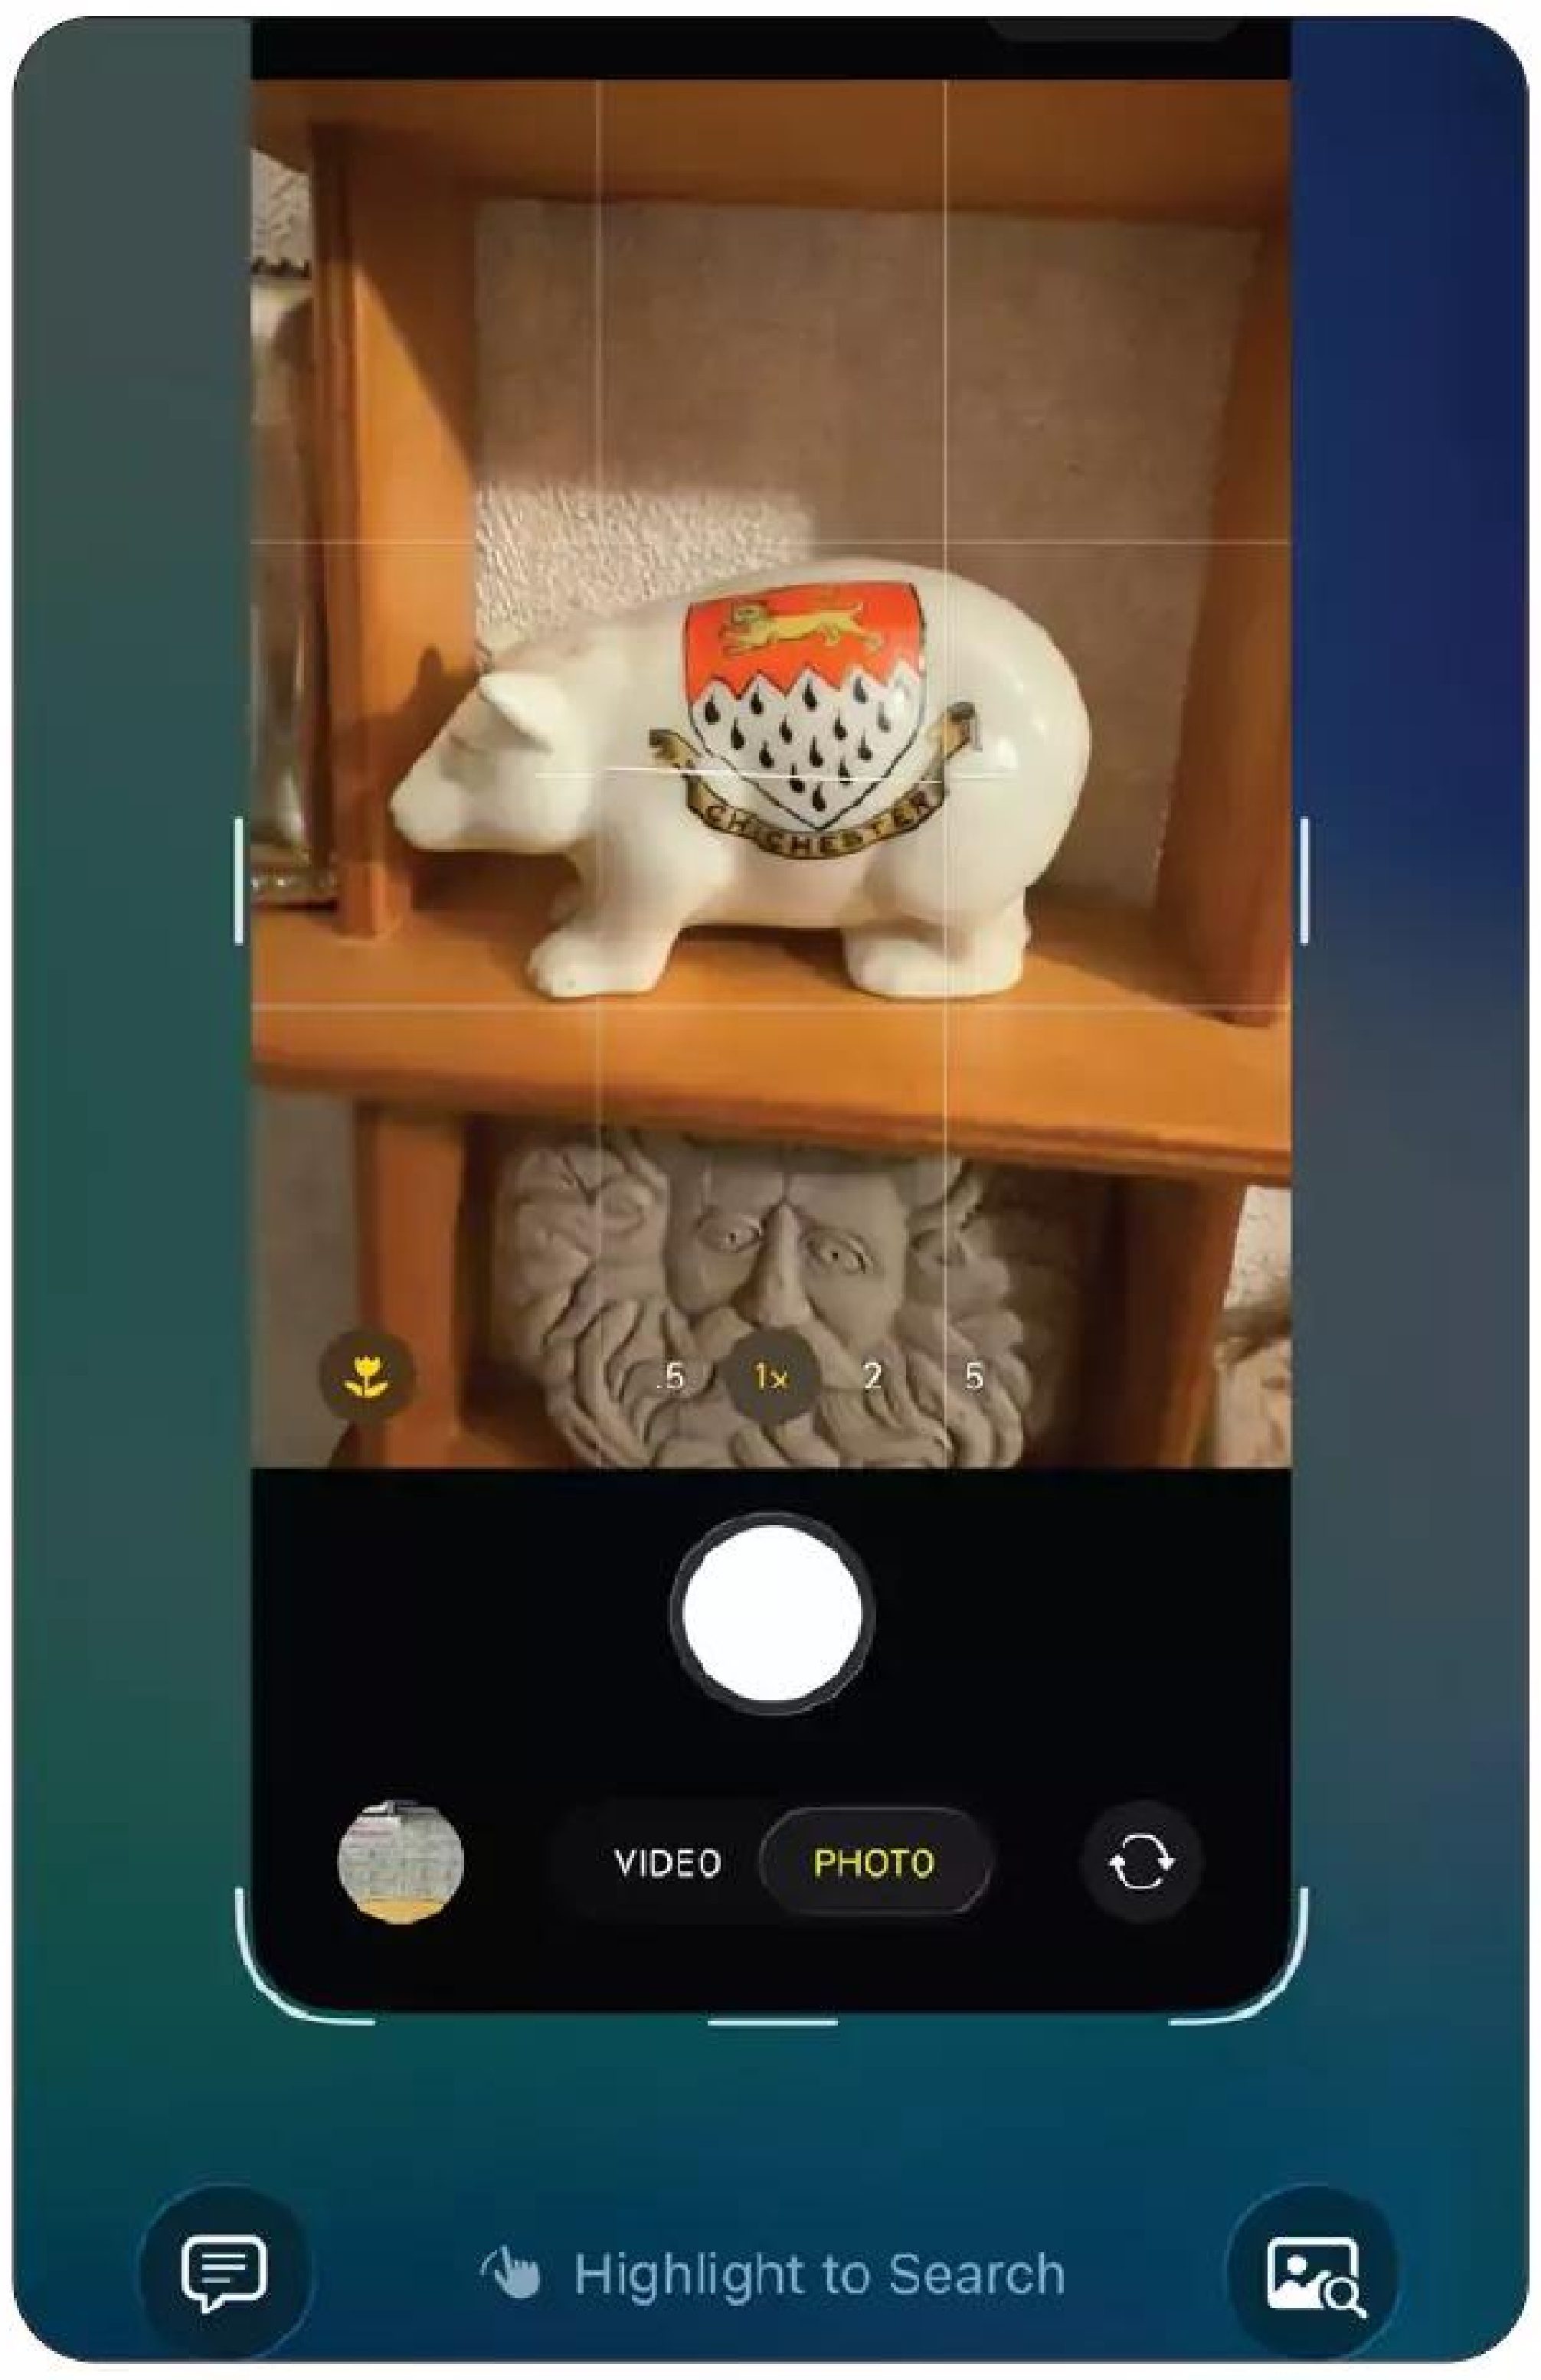


1 There are two ways to use Visual Intelligence. You can tap and hold the Camera Control button, and point the camera at the subject. If you don't have a Camera Control button, you can use a Visual Intelligence control.



Focus
Add a Control

2 To add a Visual Intelligence control button to the Control Centre, swipe in from the top-right corner of the screen tap and hold, then tap Add a Control. Find Visual Intelligence, and tap it to add it to Control Centre.



.5
1x
2
5
VIDEO
PHOTO
Highlight to Search

3 Alternatively, open a photo or point your camera at a subject, and press Vol Up and the Side button simultaneously. A screenshot is taken. Tap the thumbnail when it appears, and use Visual Intelligence from there.

Visual Lookup

The old school Visual Lookup feature is still here. With it, you can look up places, animals, flowers and art. Simply take a photo (not a screenshot) of the thing in question, and then open it in the Photos app. If Visual Lookup is possible, the 'i' icon gets a little star, and maybe changes shape. Tap it and select 'Loop Up X' for more information on the subject of your photo.

Ask
Search

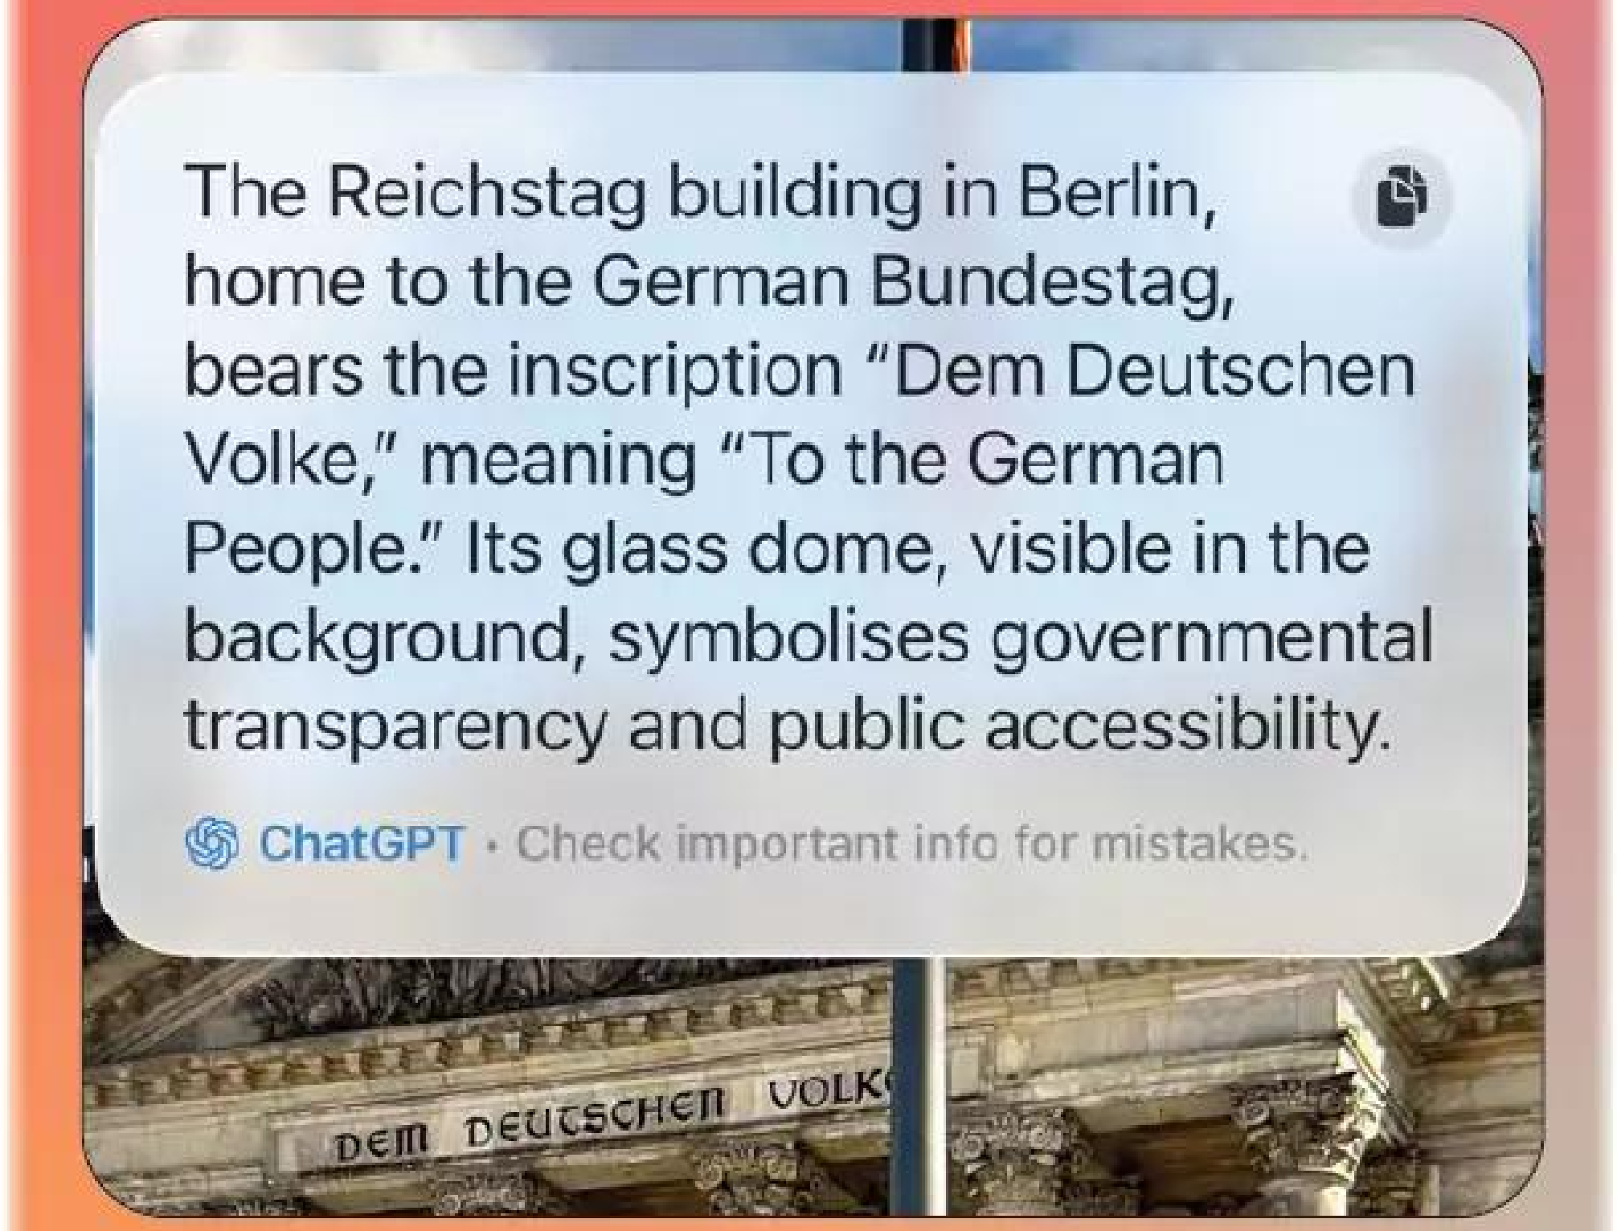
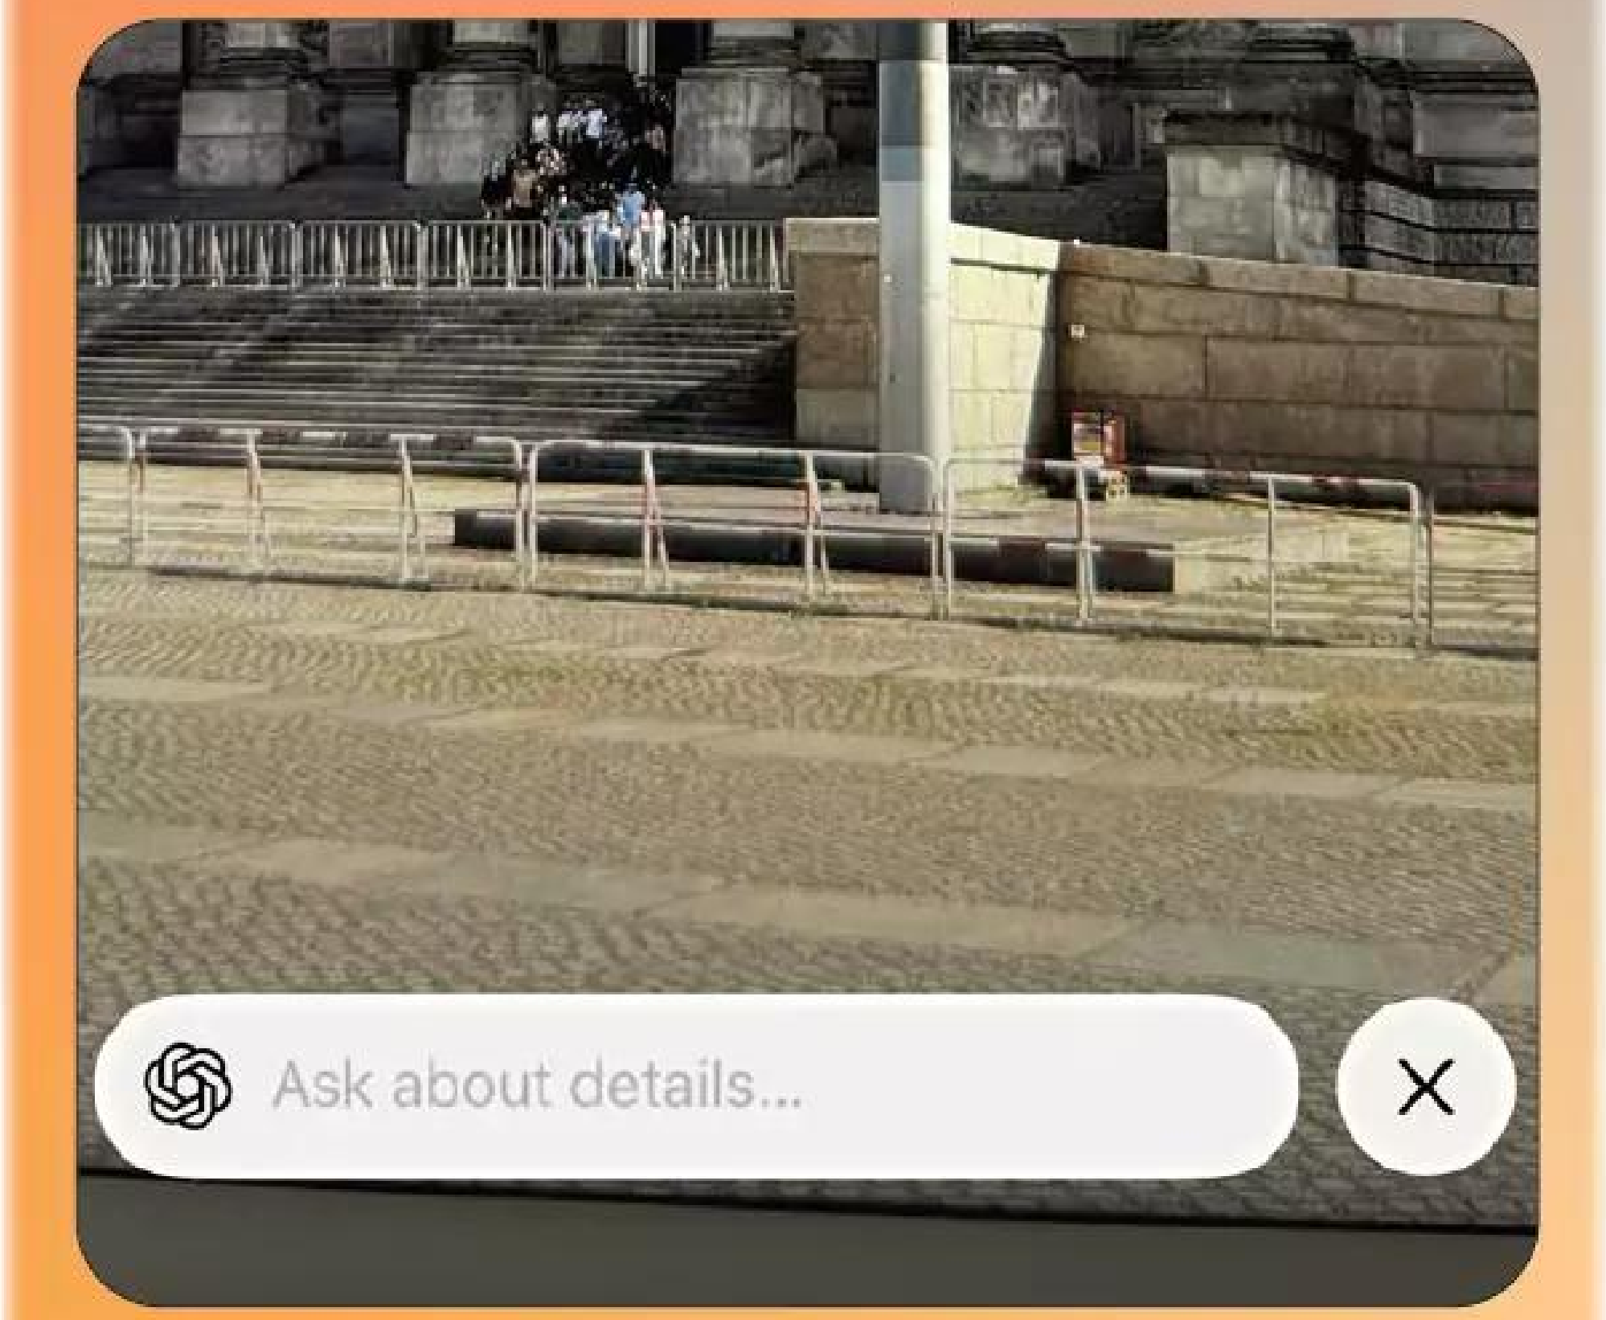
Hold the Camera Control button or tap a Visual Intelligence control and point your camera at something you want to know more about. Soon, a button marked Ask appears in the bottom-left corner.



The Reichstag building in Berlin, home to the German Bundestag, bears the inscription "Dem Deutschen Volke," meaning "To the German People." Its glass dome, visible in the background, symbolises governmental transparency and public accessibility.

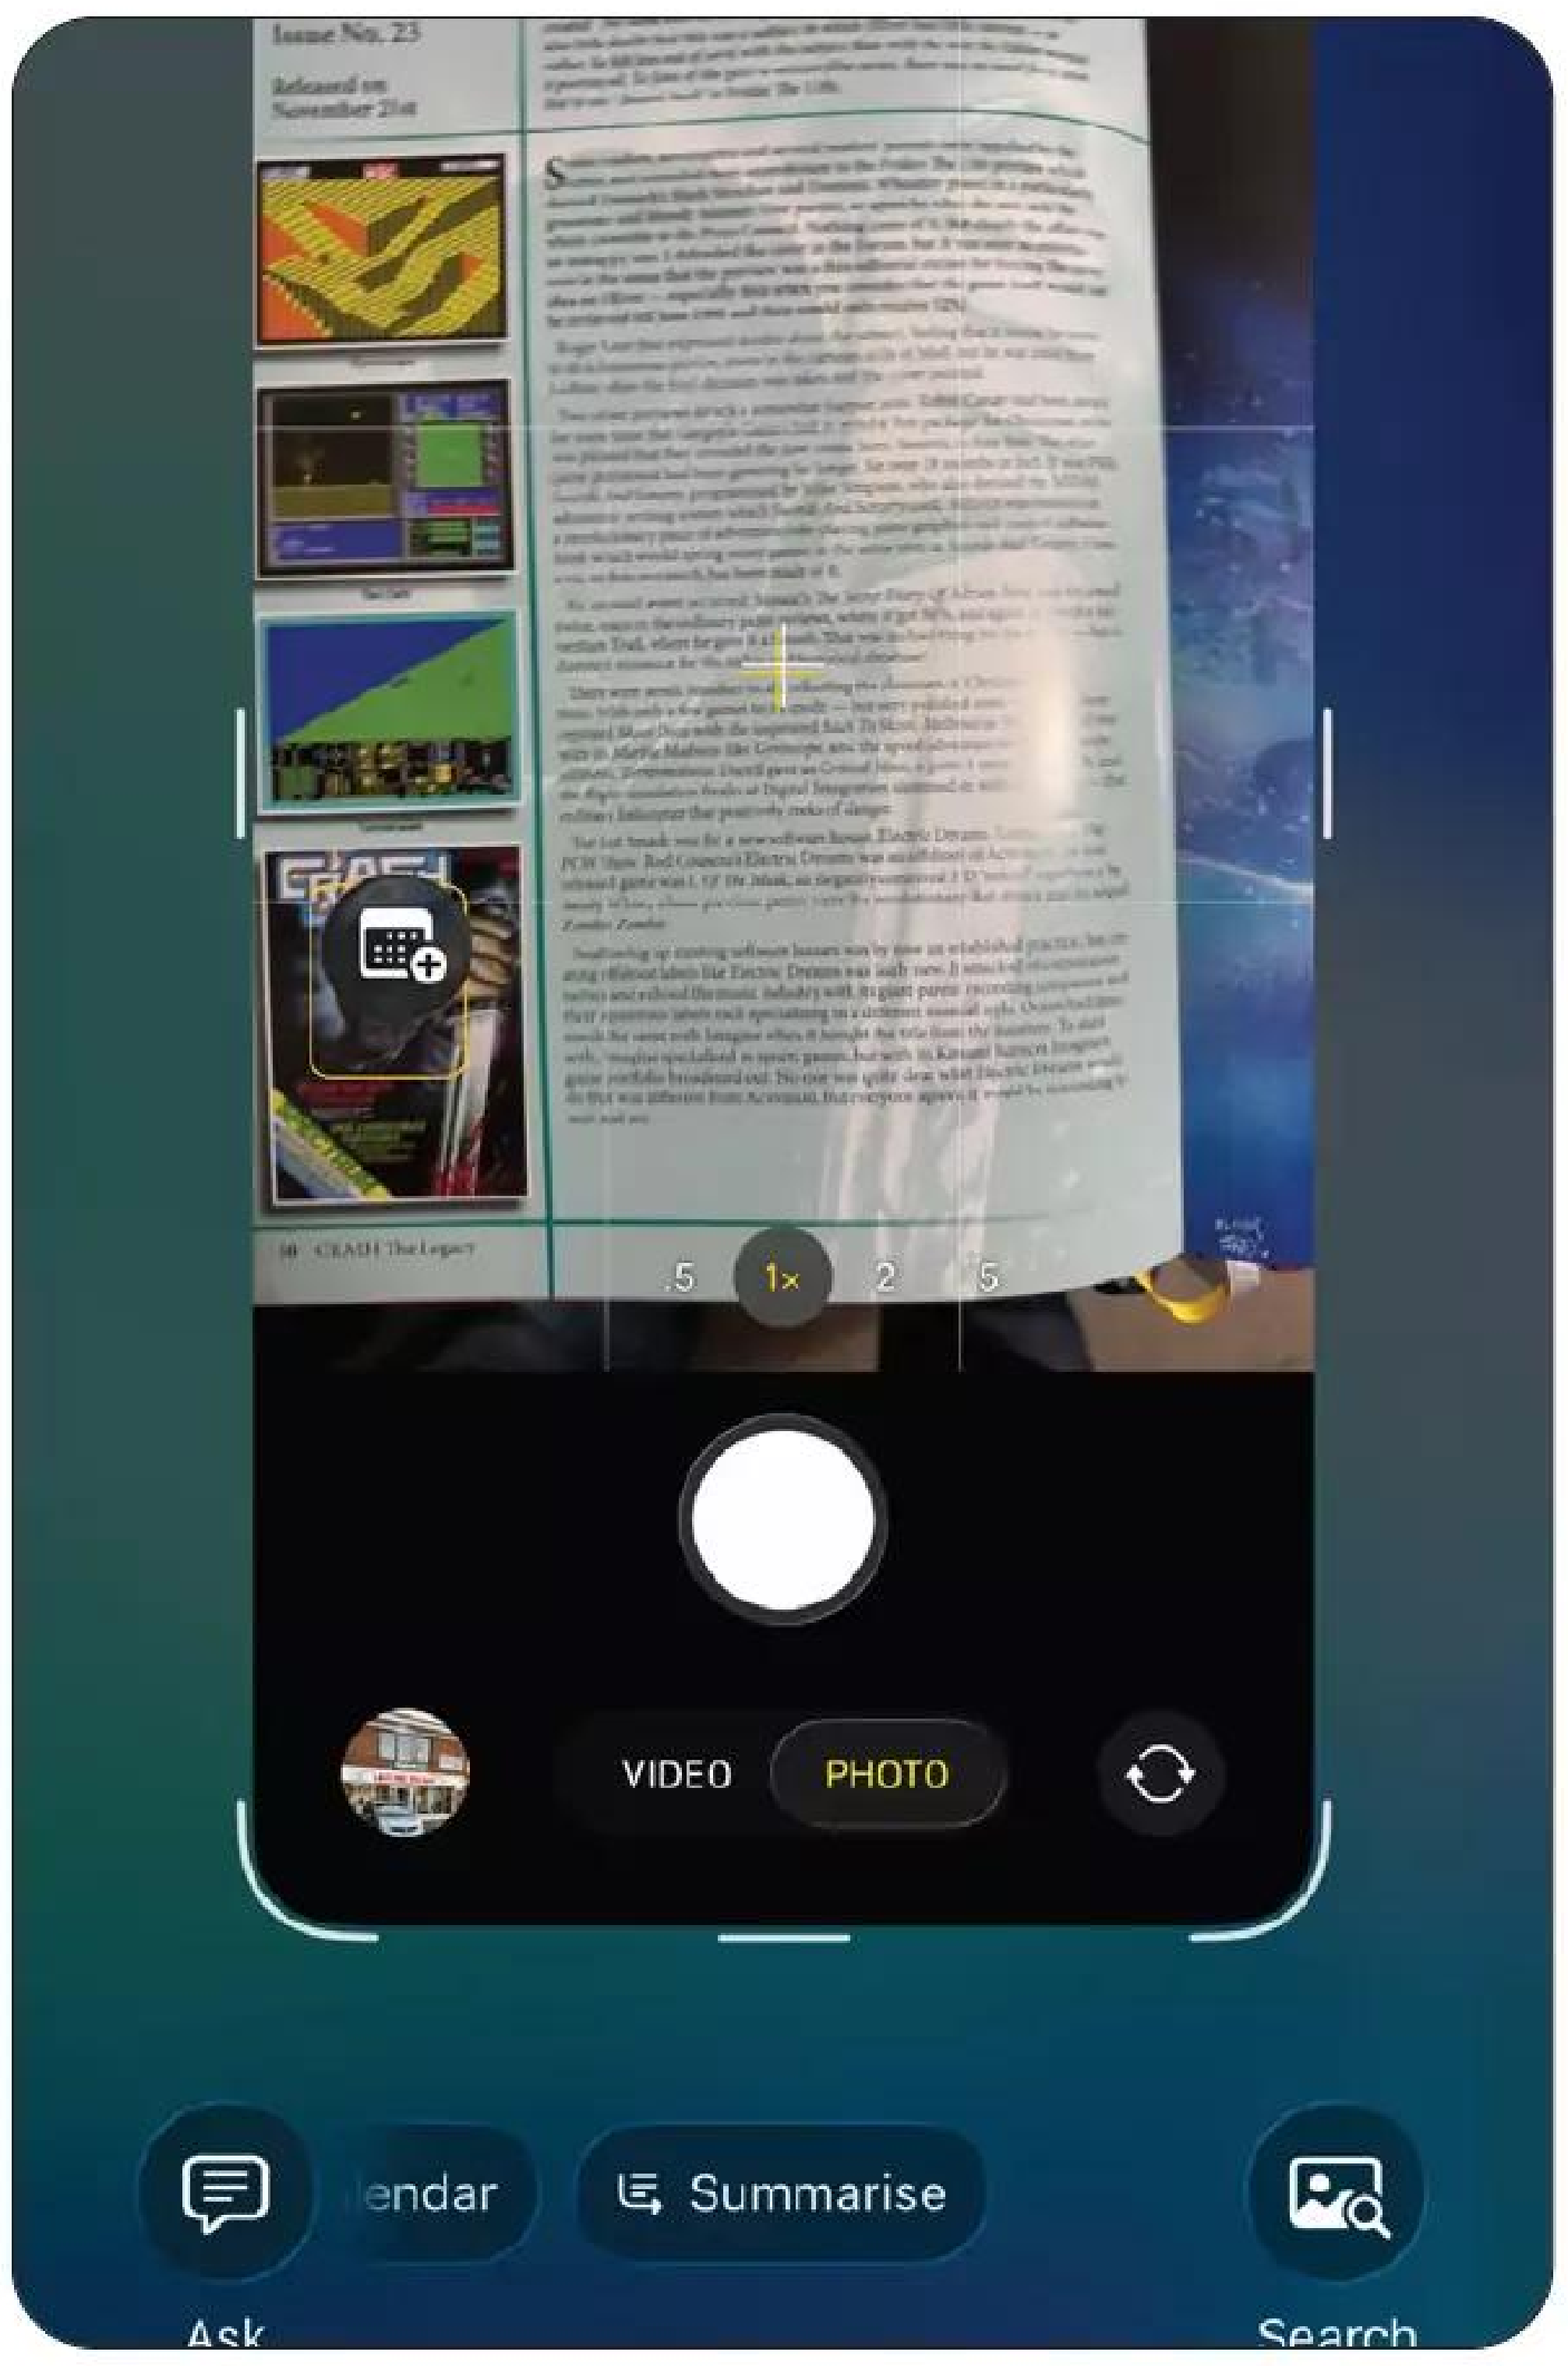
ChatGPT · Check important info for mistakes.



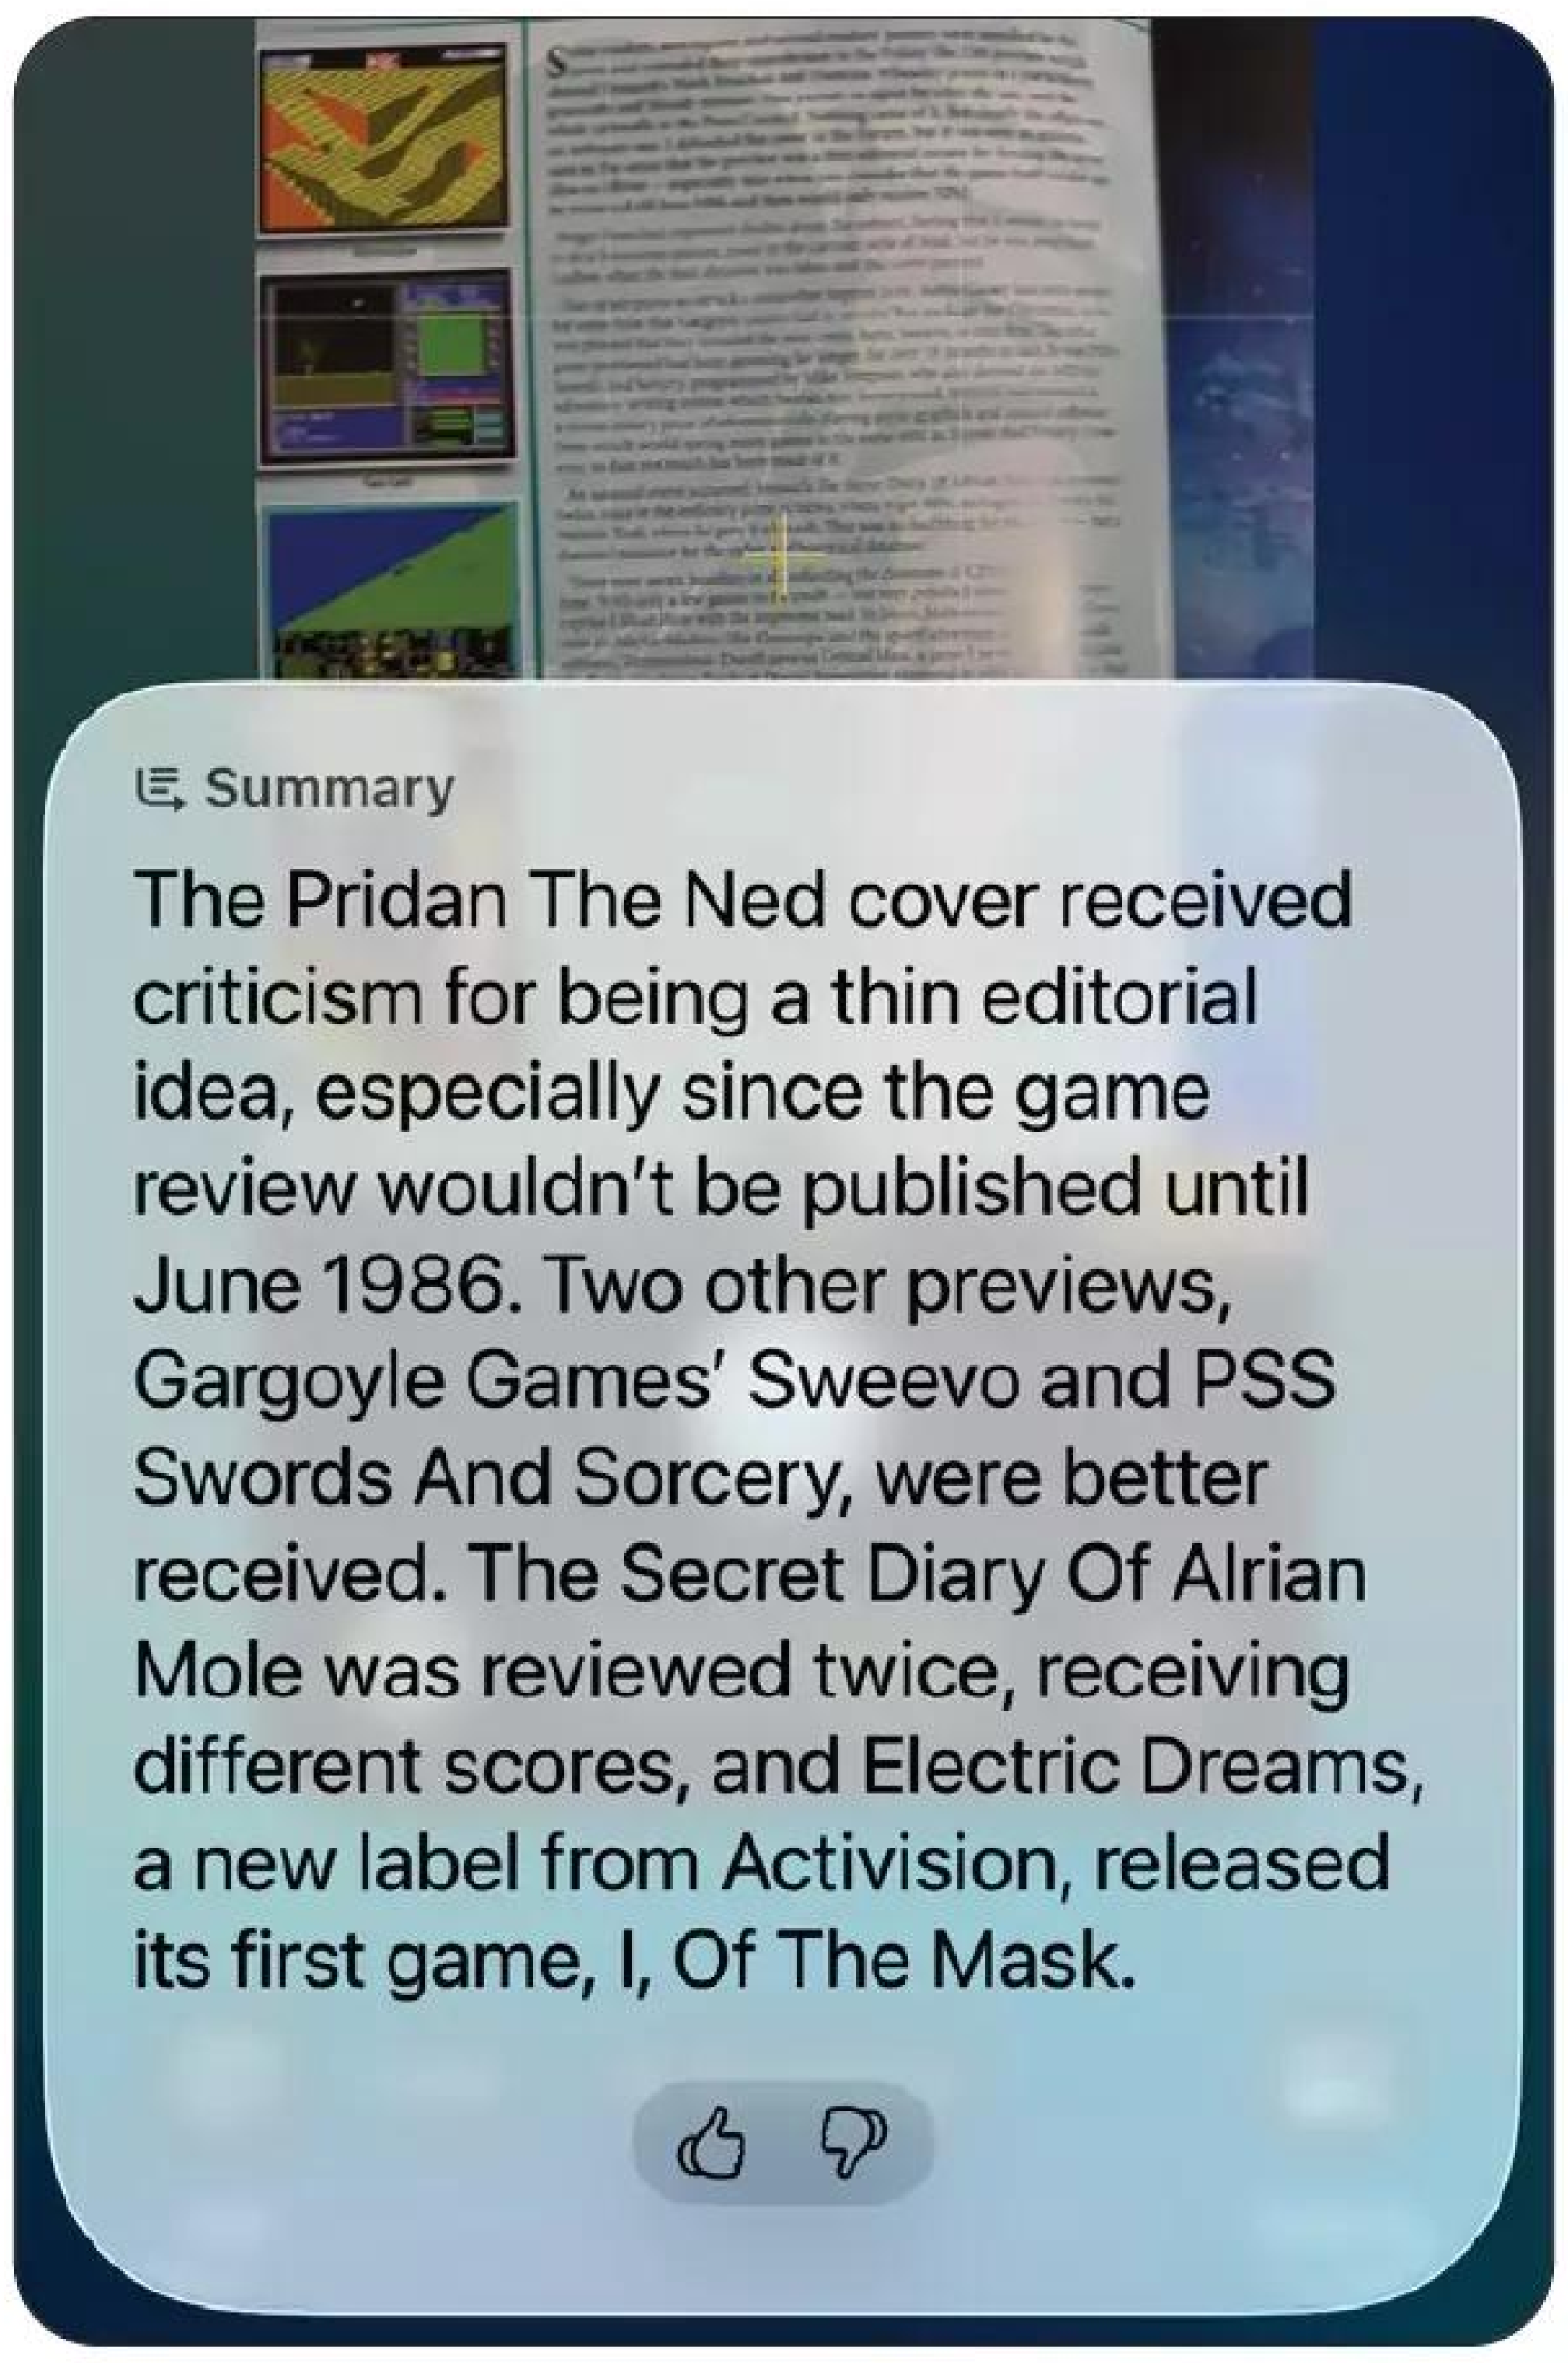
Ask about details...

Tap this button, and a ChatGPT field appears. Type a question if you have something specific to ask. Alternatively, wait and ChatGPT will give you information without further prompting.

Summarise Text

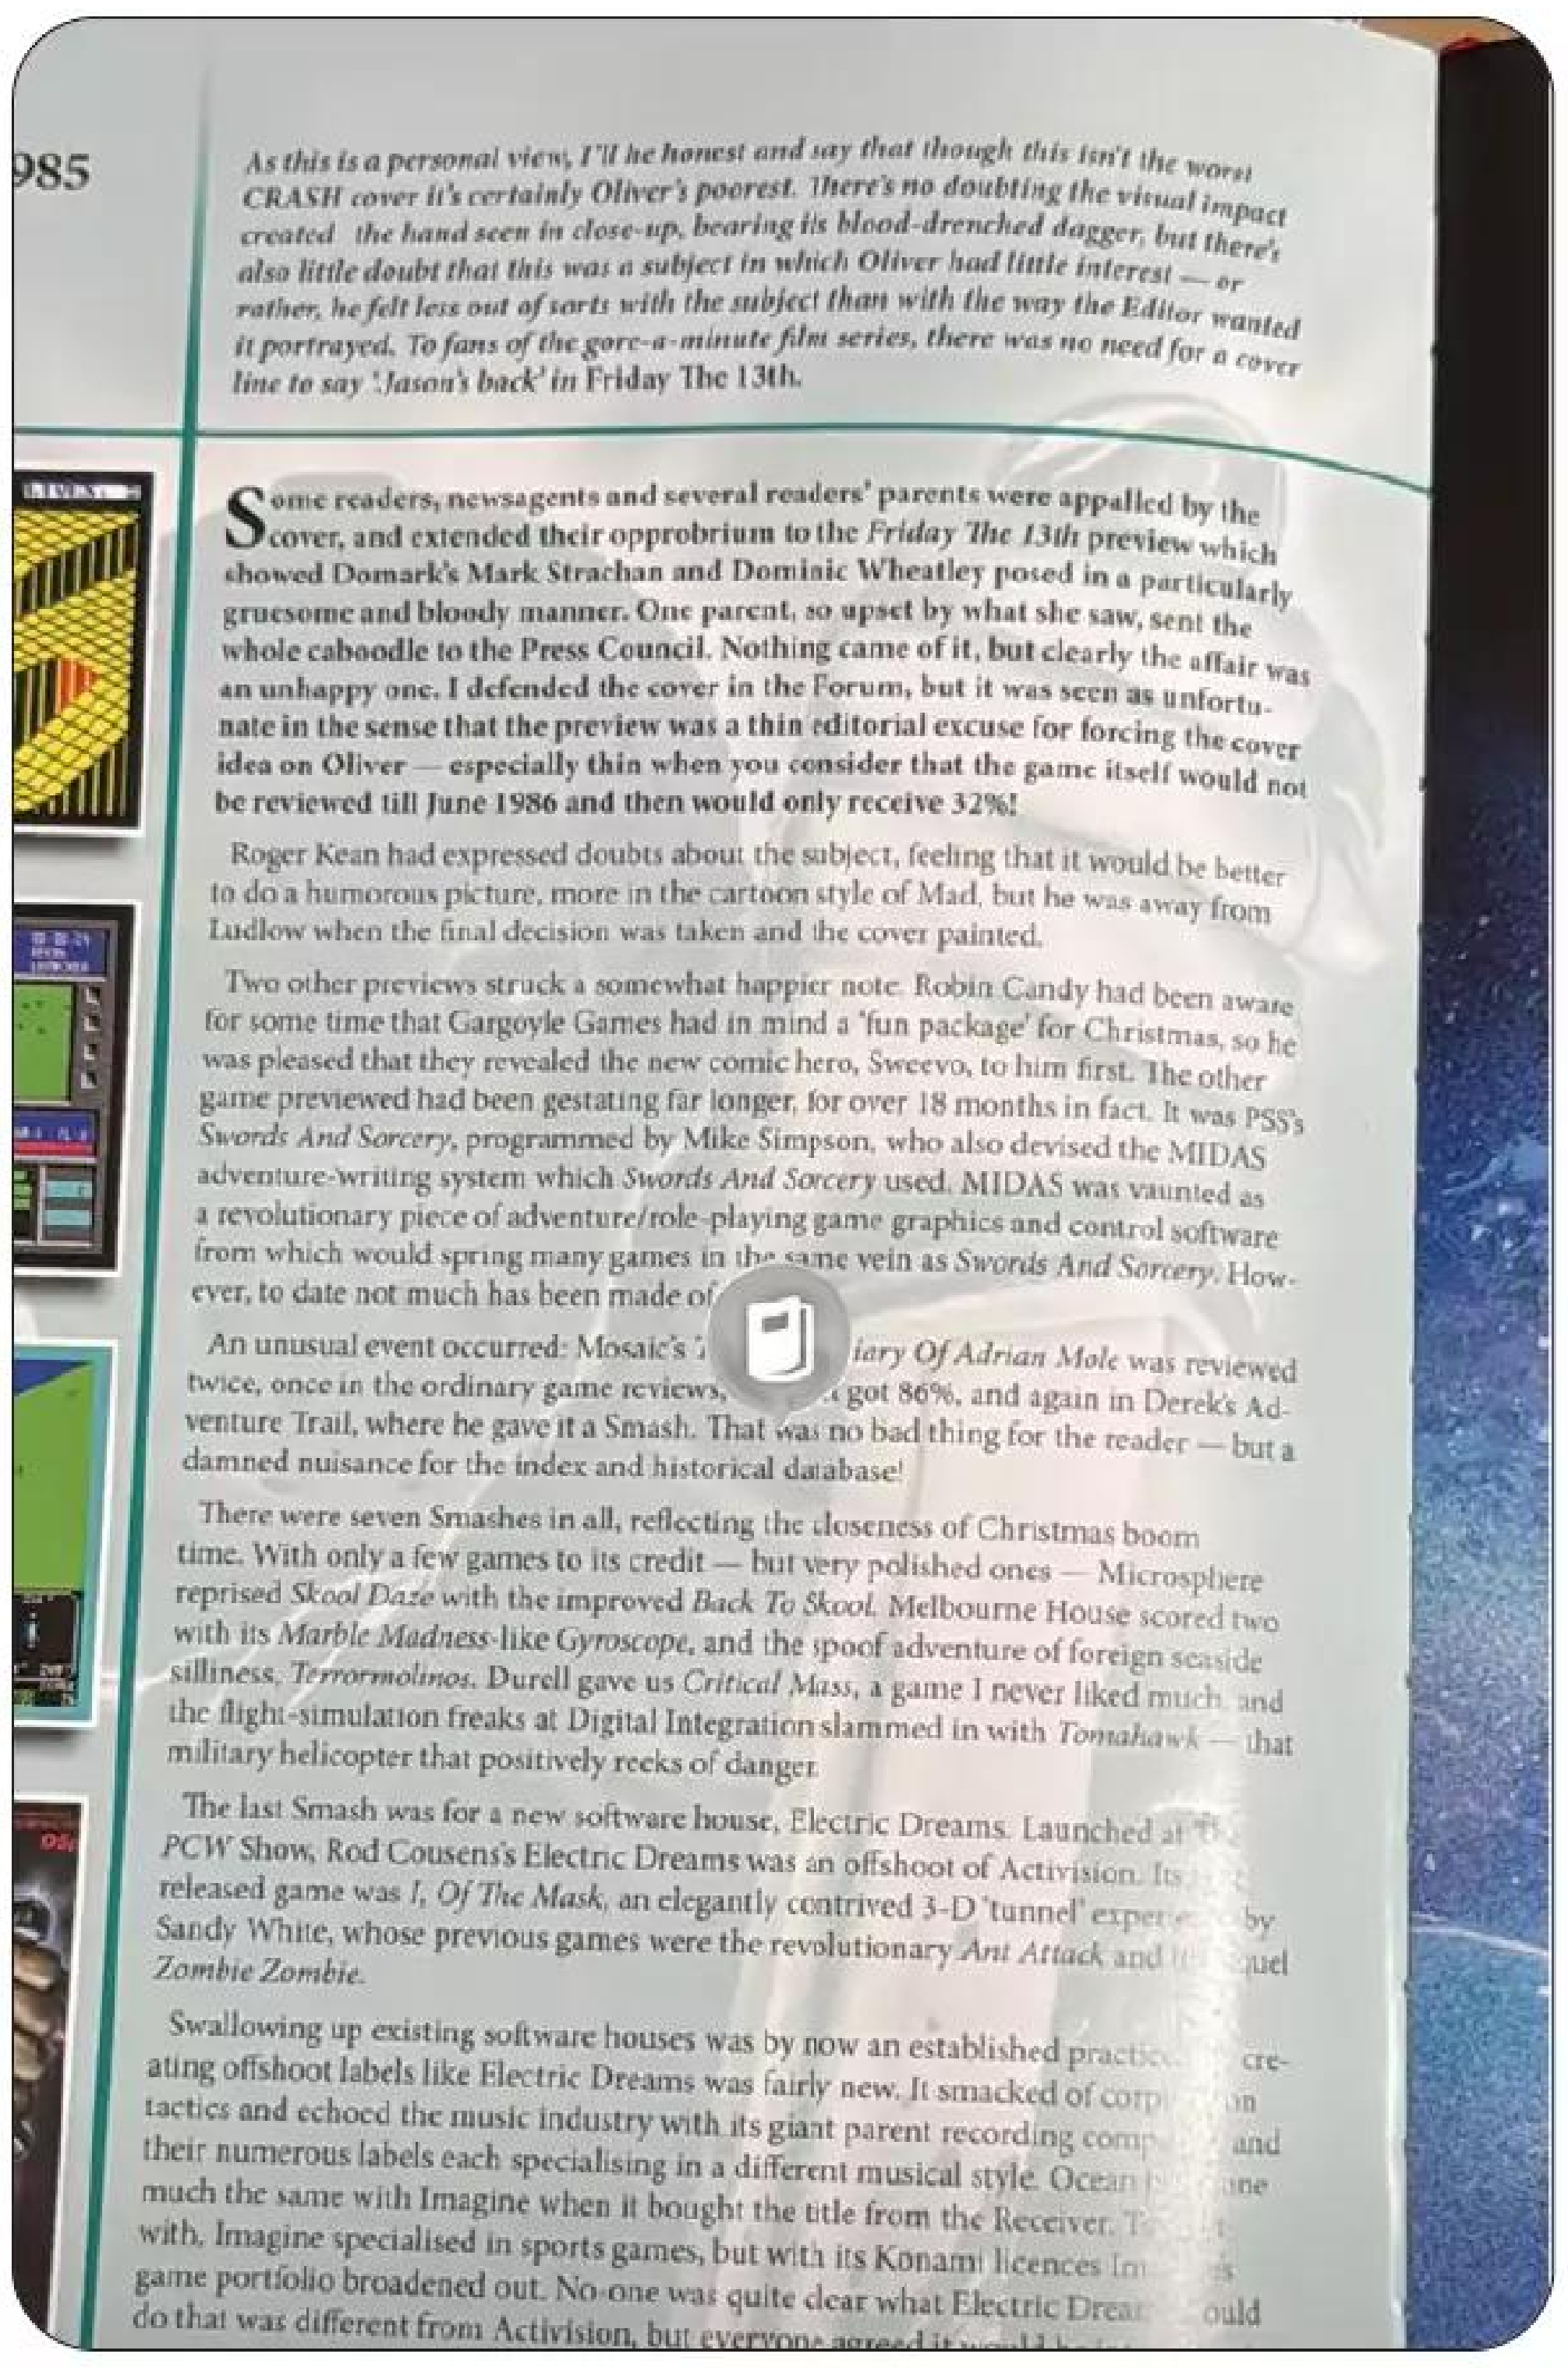


1 You can do this with your Camera Control button or Visual Intelligence control, or with a screenshot. Point at and/or screenshot a large piece of text. A Summarise button appears – you might have to swipe to it.



The Pridan The Ned cover received criticism for being a thin editorial idea, especially since the game review wouldn't be published until June 1986. Two other previews, Gargoyle Games' Sweevo and PSS Swords And Sorcery, were better received. The Secret Diary Of Alrian Mole was reviewed twice, receiving different scores, and Electric Dreams, a new label from Activision, released its first game, I, Of The Mask.

2 A summary of the text is shown in a window at the foot of the screen. You can give it a thumbs-up or thumbs-down to score how well it did. To report a concern about the summary, tap and hold it then tap the report button.



As this is a personal view, I'll be honest and say that though this isn't the worst CRASH cover it's certainly Oliver's poorest. There's no doubting the visual impact created the hand seen in close-up, bearing its blood-drenched dagger, but there's also little doubt that this was a subject in which Oliver had little interest — or rather, he felt less out of sorts with the subject than with the way the Editor wanted it portrayed. To fans of the gore-a-minute film series, there was no need for a cover line to say 'Jason's back' in Friday The 13th.

Some readers, newsagents and several readers' parents were appalled by the cover, and extended their opprobrium to the *Friday The 13th* preview which showed Domark's Mark Strachan and Dominic Wheatley posed in a particularly gruesome and bloody manner. One parent, so upset by what she saw, sent the whole caboodle to the Press Council. Nothing came of it, but clearly the affair was an unhappy one. I defended the cover in the Forum, but it was seen as unfortunate in the sense that the preview was a thin editorial excuse for forcing the cover idea on Oliver — especially thin when you consider that the game itself would not be reviewed till June 1986 and then would only receive 32%!

Roger Kean had expressed doubts about the subject, feeling that it would be better to do a humorous picture, more in the cartoon style of Mad, but he was away from Ludlow when the final decision was taken and the cover painted.

Two other previews struck a somewhat happier note. Robin Candy had been aware for some time that Gargoyle Games had in mind a 'fun package' for Christmas, so he was pleased that they revealed the new comic hero, Sweevo, to him first. The other game previewed had been gestating far longer, for over 18 months in fact. It was PSS's *Swords And Sorcery*, programmed by Mike Simpson, who also devised the MIDAS adventure-writing system which *Swords And Sorcery* used. MIDAS was vaunted as a revolutionary piece of adventure/role-playing game graphics and control software from which would spring many games in the same vein as *Swords And Sorcery*. However, to date not much has been made of [illegible]

An unusual event occurred: Mosaic's [illegible] *iary Of Adrian Mole* was reviewed twice, once in the ordinary game reviews, [illegible] got 86%, and again in Derek's Adventure Trail, where he gave it a Smash. That was no bad thing for the reader — but a damned nuisance for the index and historical database!

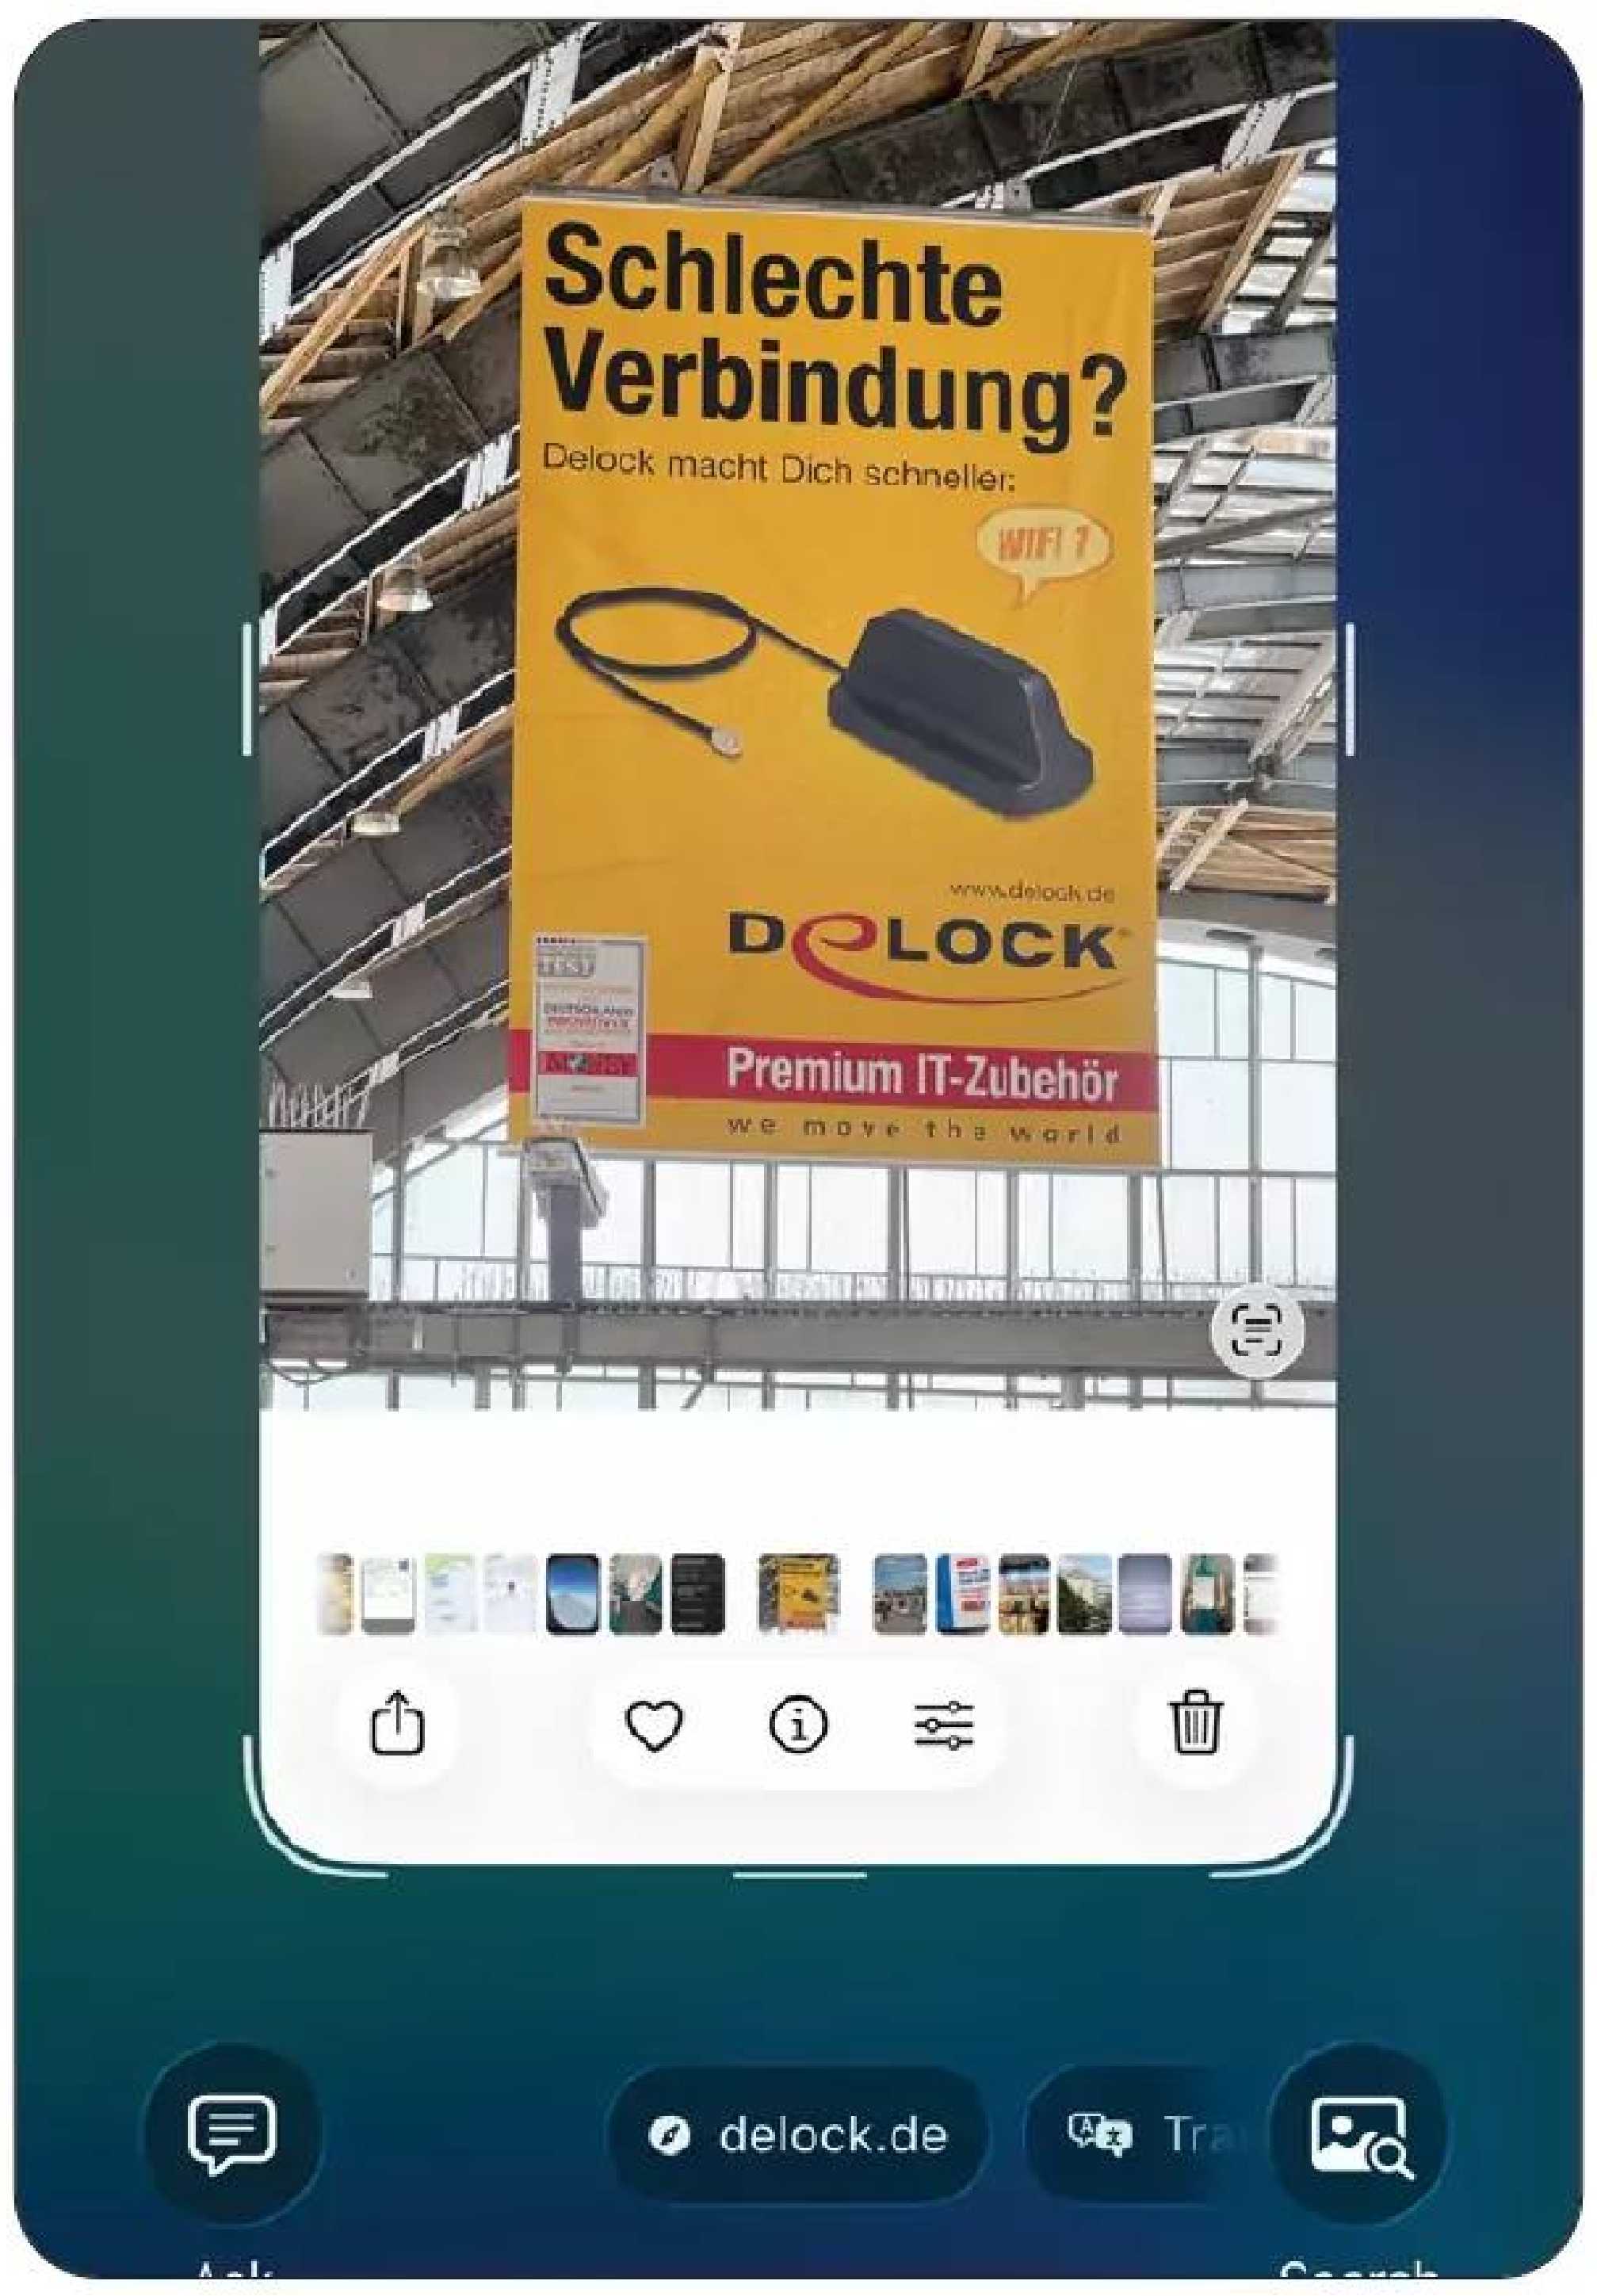
There were seven Smashes in all, reflecting the closeness of Christmas boom time. With only a few games to its credit — but very polished ones — Microsphere reprised *Skool Daze* with the improved *Back To Skool*. Melbourne House scored two with its *Marble Madness*-like *Gyroscope*, and the spoof adventure of foreign seaside silliness, *Terrormolinos*. Durell gave us *Critical Mass*, a game I never liked much, and the flight-simulation freaks at Digital Integration slammed in with *Tomahawk* — that military helicopter that positively reeks of danger.

The last Smash was for a new software house, Electric Dreams. Launched at [illegible] *PCW* Show, Rod Cousens's Electric Dreams was an offshoot of Activision. Its [illegible] released game was *I, Of The Mask*, an elegantly contrived 3-D 'tunnel' [illegible] by Sandy White, whose previous games were the revolutionary *Ant Attack* and [illegible] *Zombie Zombie*.

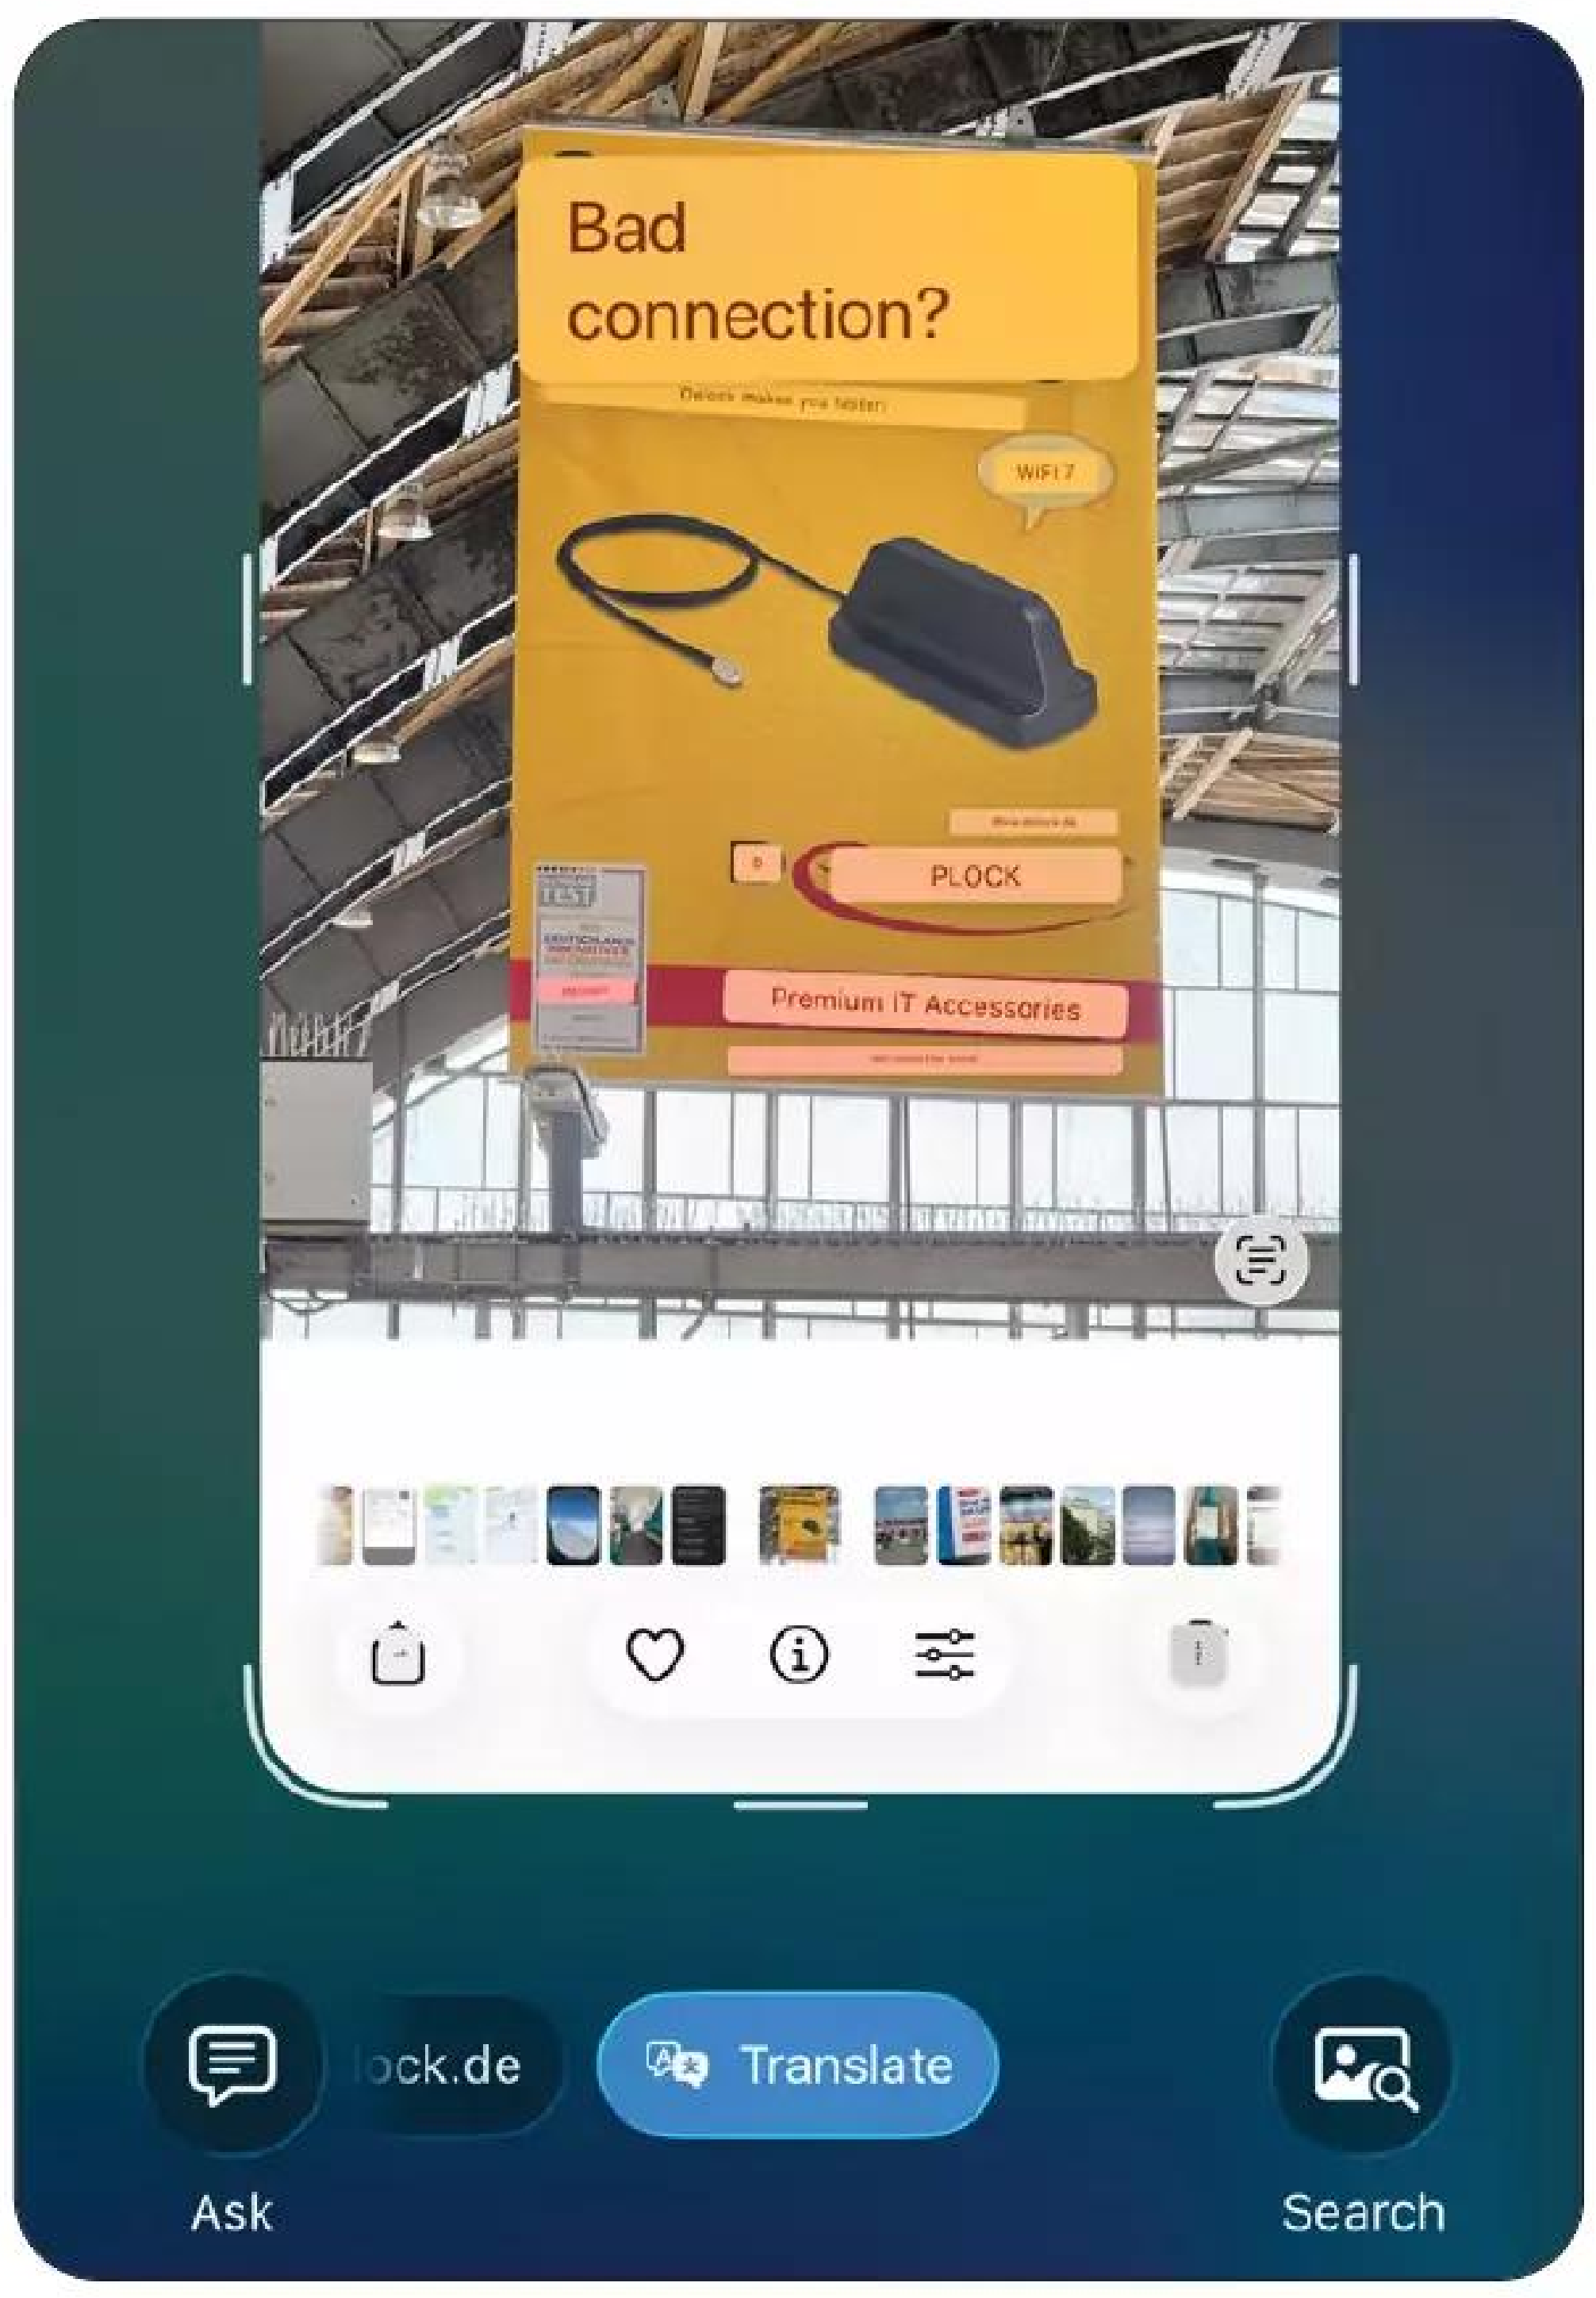
Swallowing up existing software houses was by now an established [illegible] creating offshoot labels like Electric Dreams was fairly new. It smacked of [illegible] tactics and echoed the music industry with its giant parent recording [illegible] and their numerous labels each specialising in a different musical style. Ocean [illegible] much the same with Imagine when it bought the title from the Receiver. [illegible] with, Imagine specialised in sports games, but with its Konami licences [illegible] game portfolio broadened out. No-one was quite clear what Electric [illegible] do that was different from Activision, but everyone [illegible]

3 Another option with text is to have Visual Intelligence read it aloud to you. Again a button appears, which you might have to swipe to if Visual Intelligence has found more than one action it can take. Tap it to have the text read.

Translate

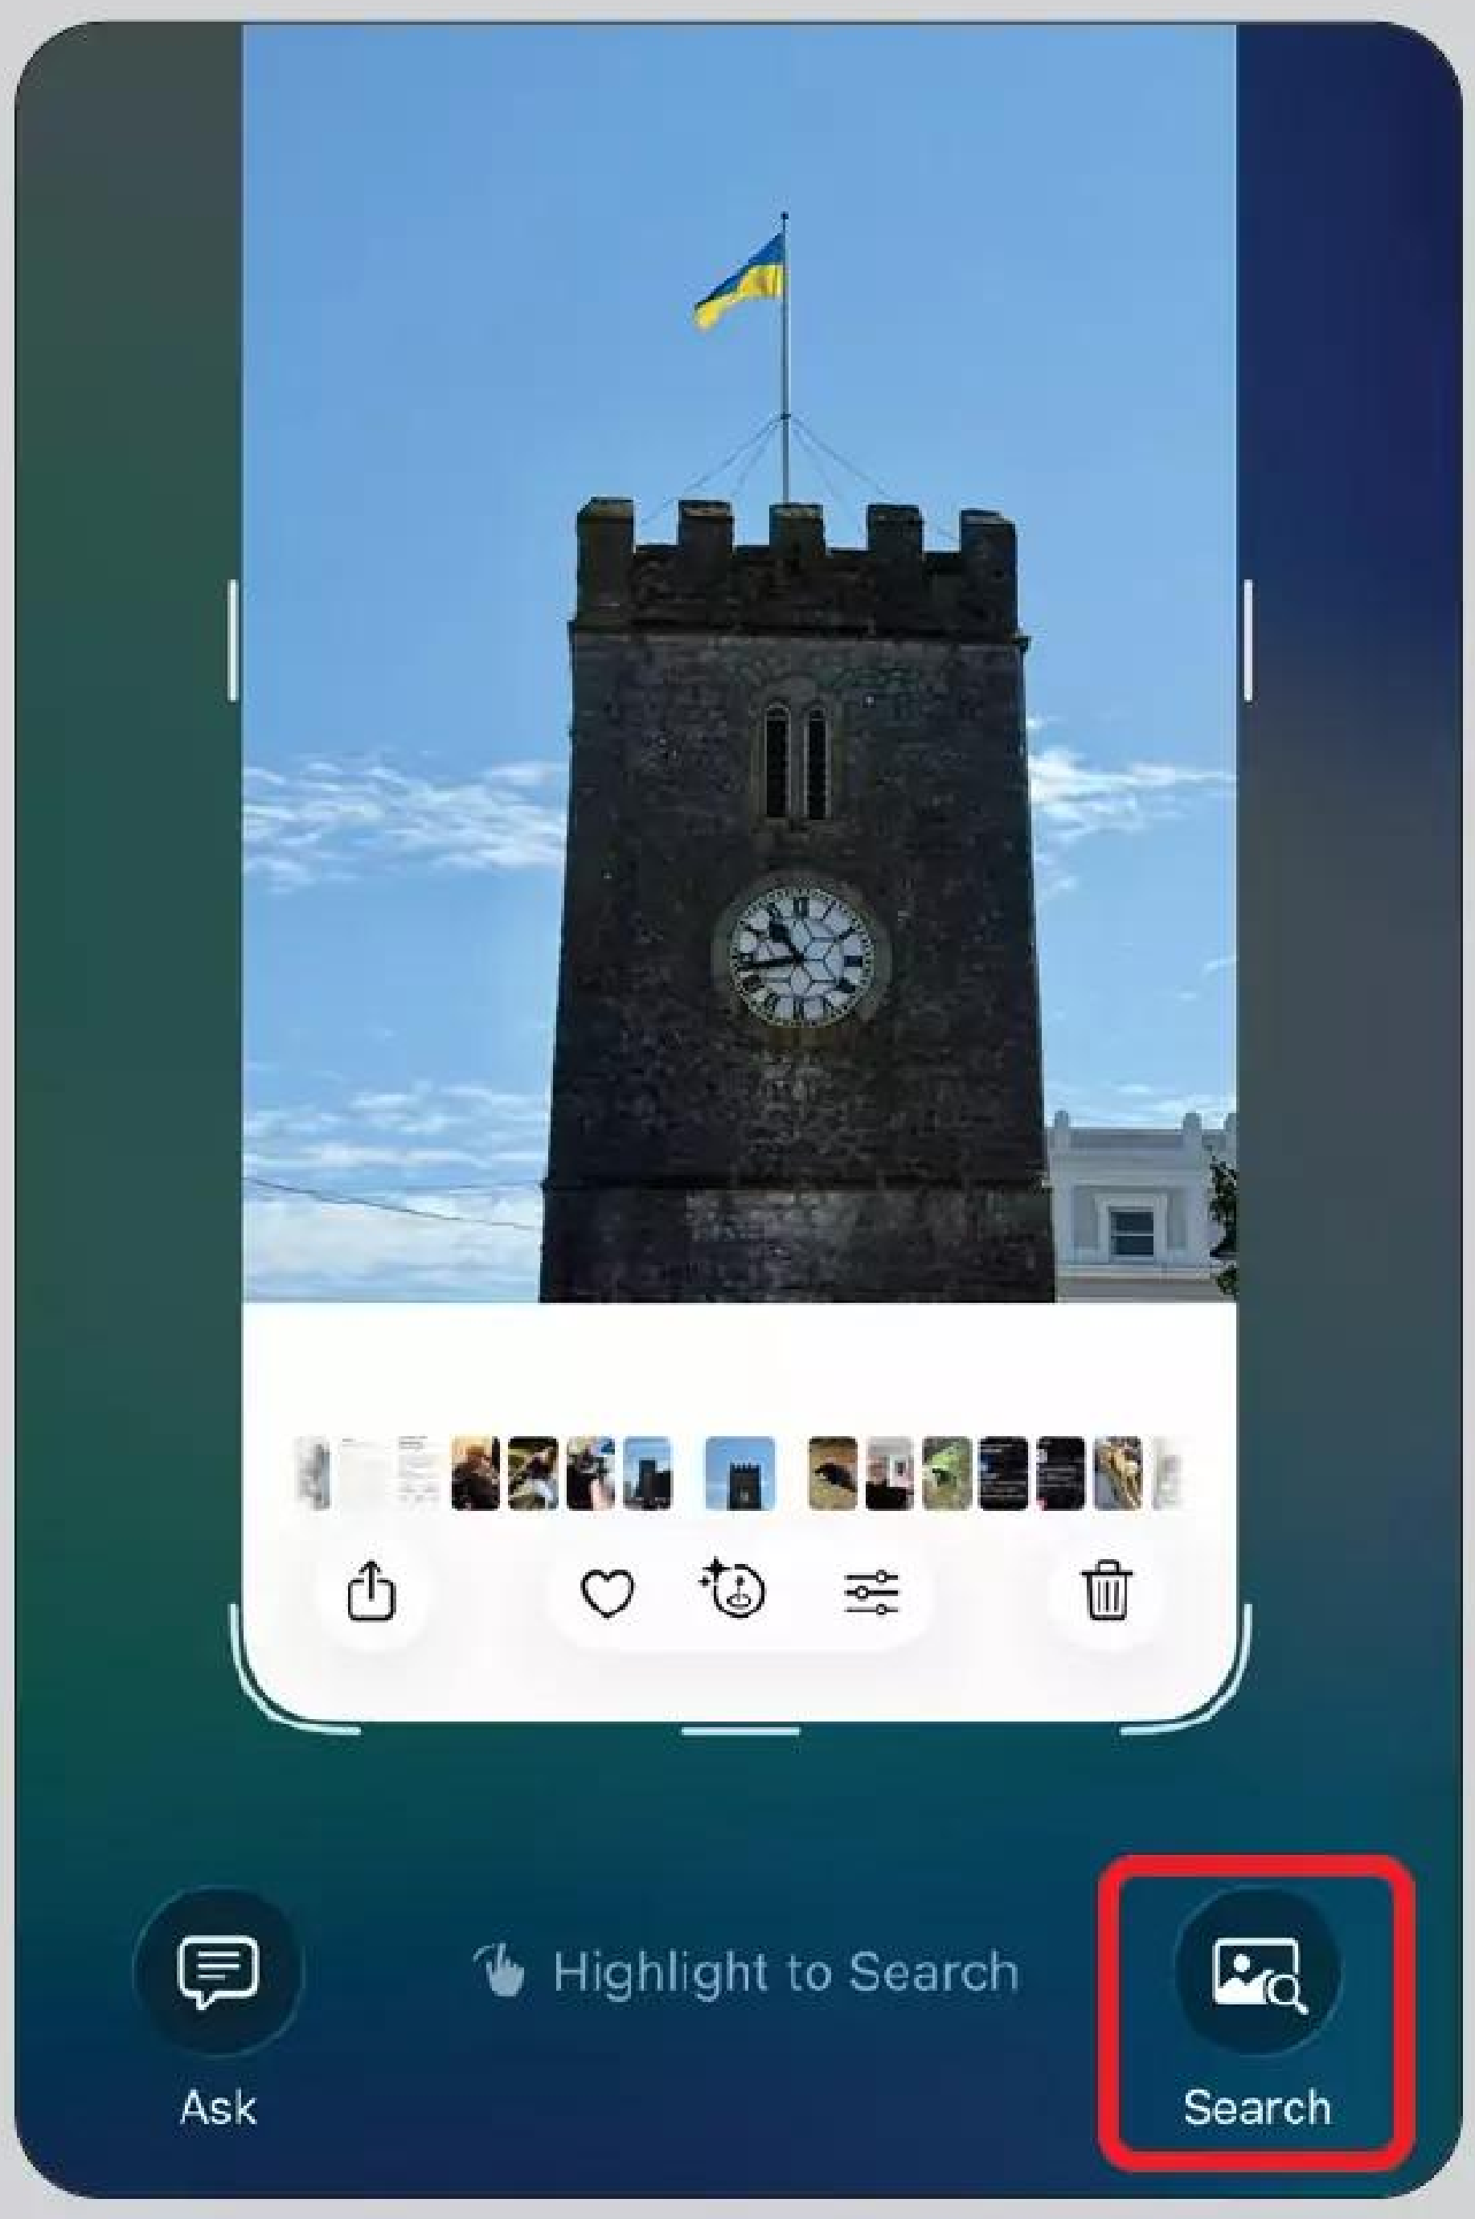


1 If you're faced with a piece of foreign text you don't understand in the real world, use Camera Control or a Visual Intelligence control. If it's in a photograph, open the photo in the Photos app and take a screenshot of it.



2 At the foot of the screen, one of the buttons is 'Translate'. Again, you might have to swipe the buttons right and left to find it. When it appears, tap it, and the foreign text is translated into your own language.

Search Button



The Search button at the foot of the screen lets you do a web search for the image as a whole, without identifying a specific object within it. Tap the button and use the tabs to switch between sites.

Image Playground Getting Creative

If you're lucky enough to have an iPhone that's capable of using Apple Intelligence, Image Playground is a great way to create and use exciting artificial intelligence-created pictures. At the time of writing Image Playground is still in Beta, so you might not always get what you expected, but it's getting better all the time. So let's get started and make some art.

Describe an image

Image Playground may create unexpected results.

1 First of all, let's describe a scene and get Image Playground to draw it. Click on the field called 'Describe an image' and type what it is you want the picture to show. Hit the return and Image Playground makes it for you.

2 The three-dots icon next to the thumbs let you copy, share or save the image. The app usually creates several pictures on the same theme. Swipe the picture left or right to cycle through them and choose your favourite.

3 Or choose an element from the icons on offer. Swipe left and right to pick through them. Choose more than one if you like. Tap the minus sign next to a theme to remove it again. The app compiles the elements into a picture.

BETA Image Playground may create unexpected results.

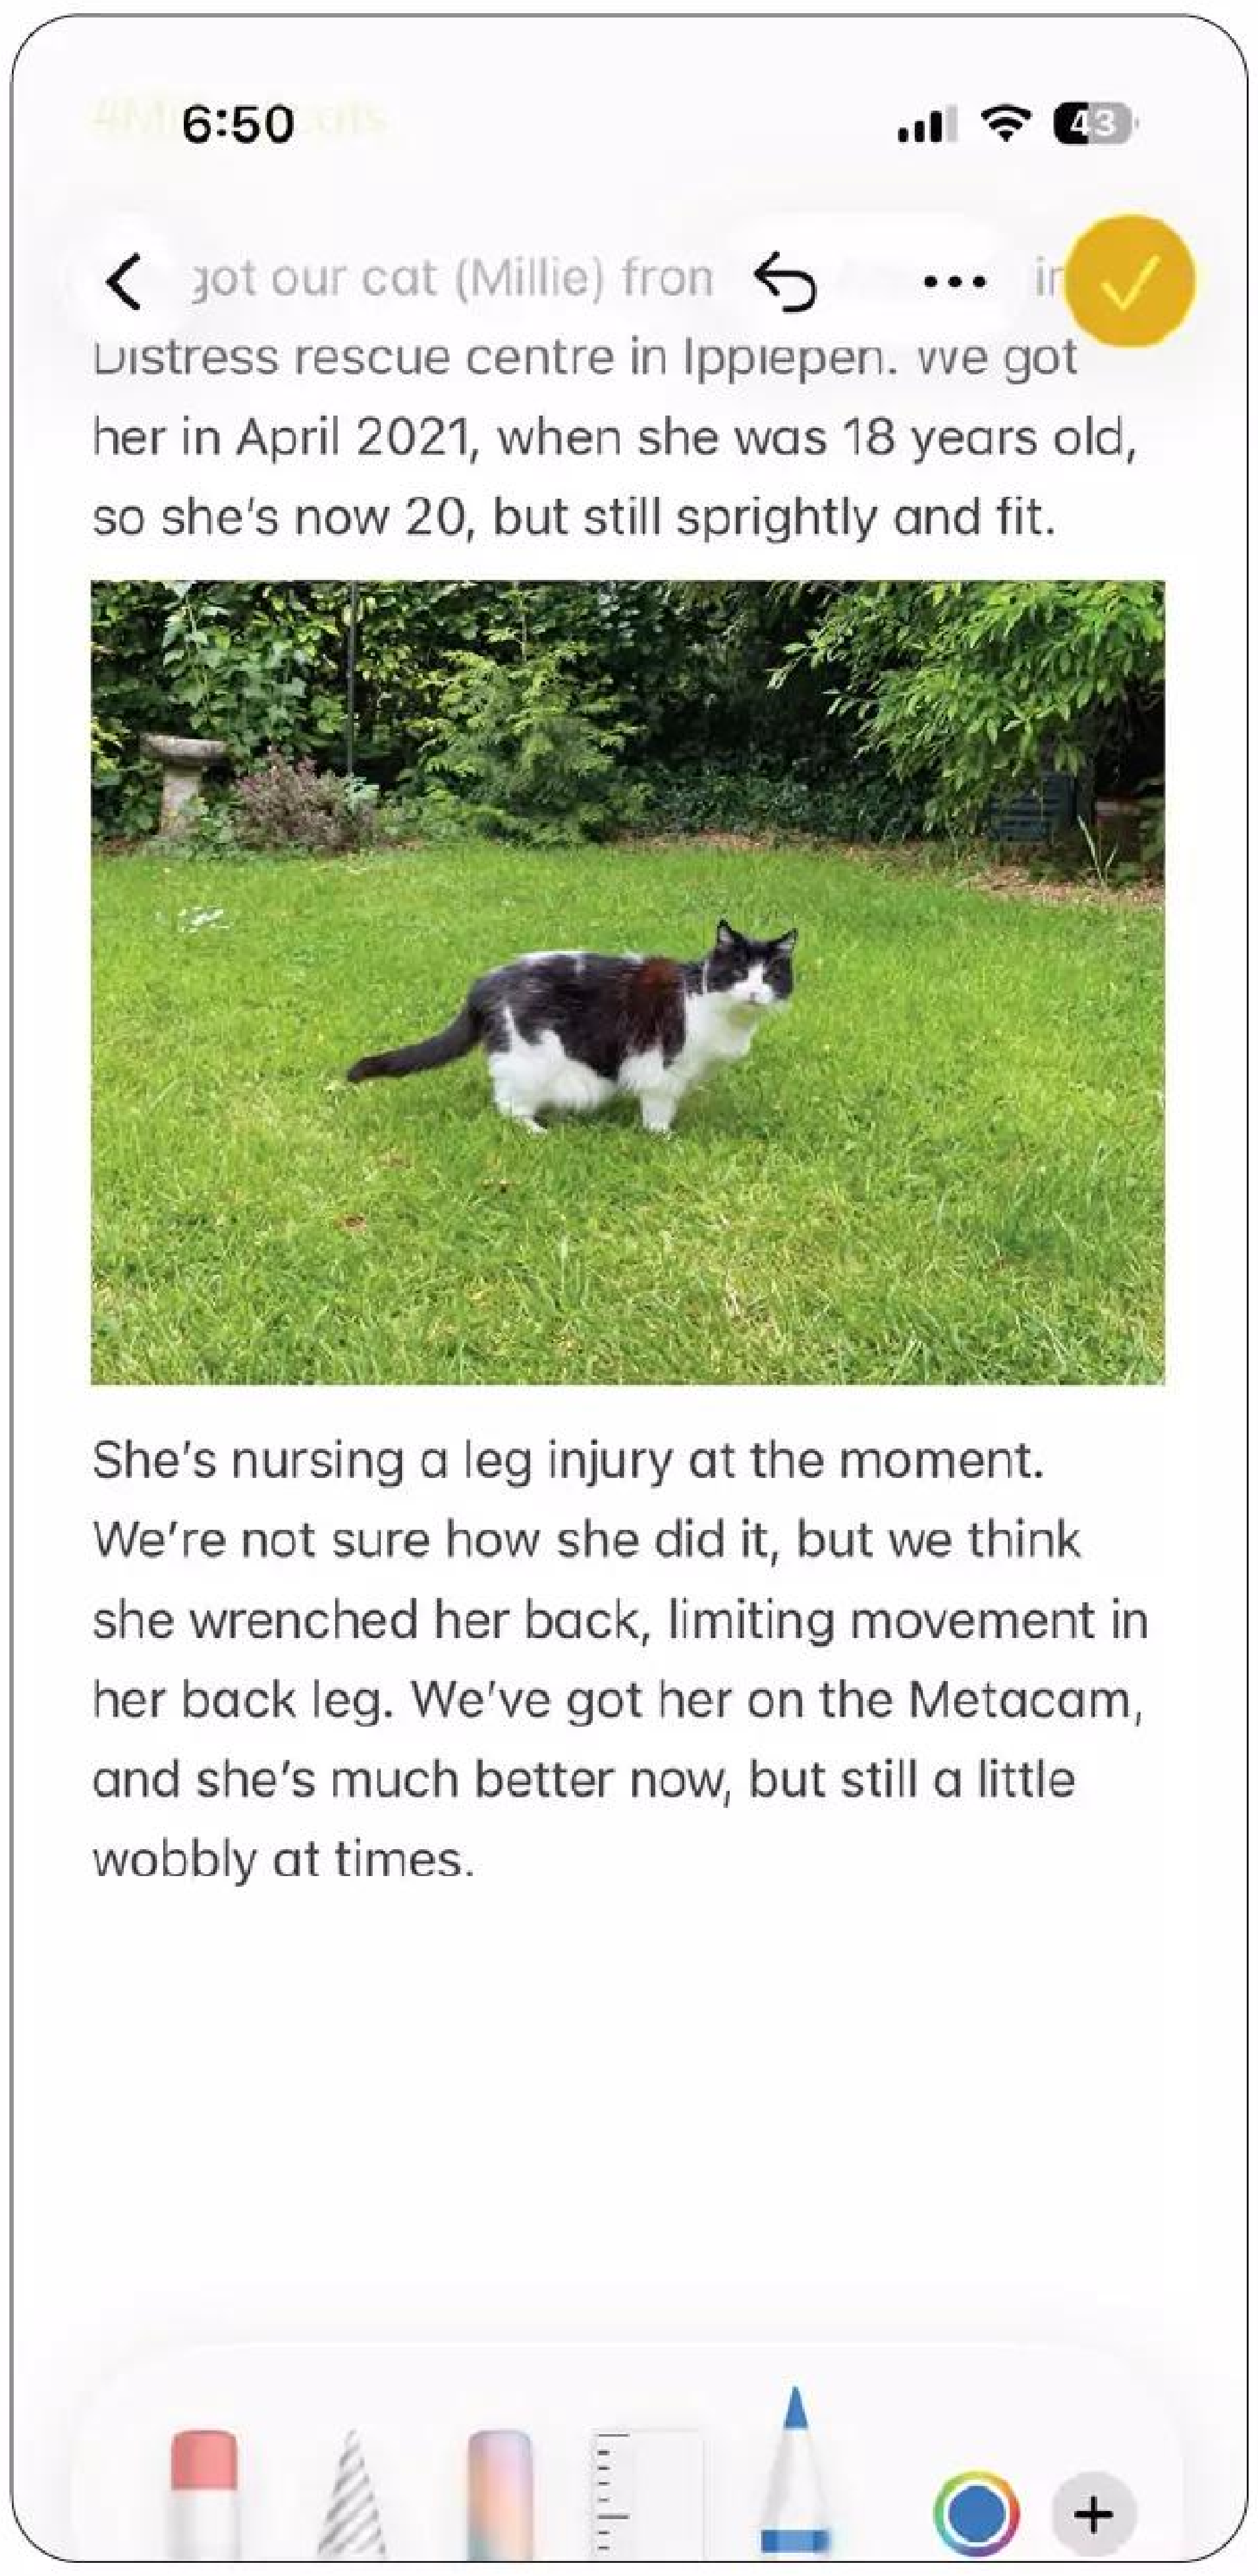
The Image Playground app is currently still in beta, so sometimes you might not get the results you expected. Keep trying – the app, and Apple Intelligence in general, is improving all the time.

Apple Intelligence in Notes

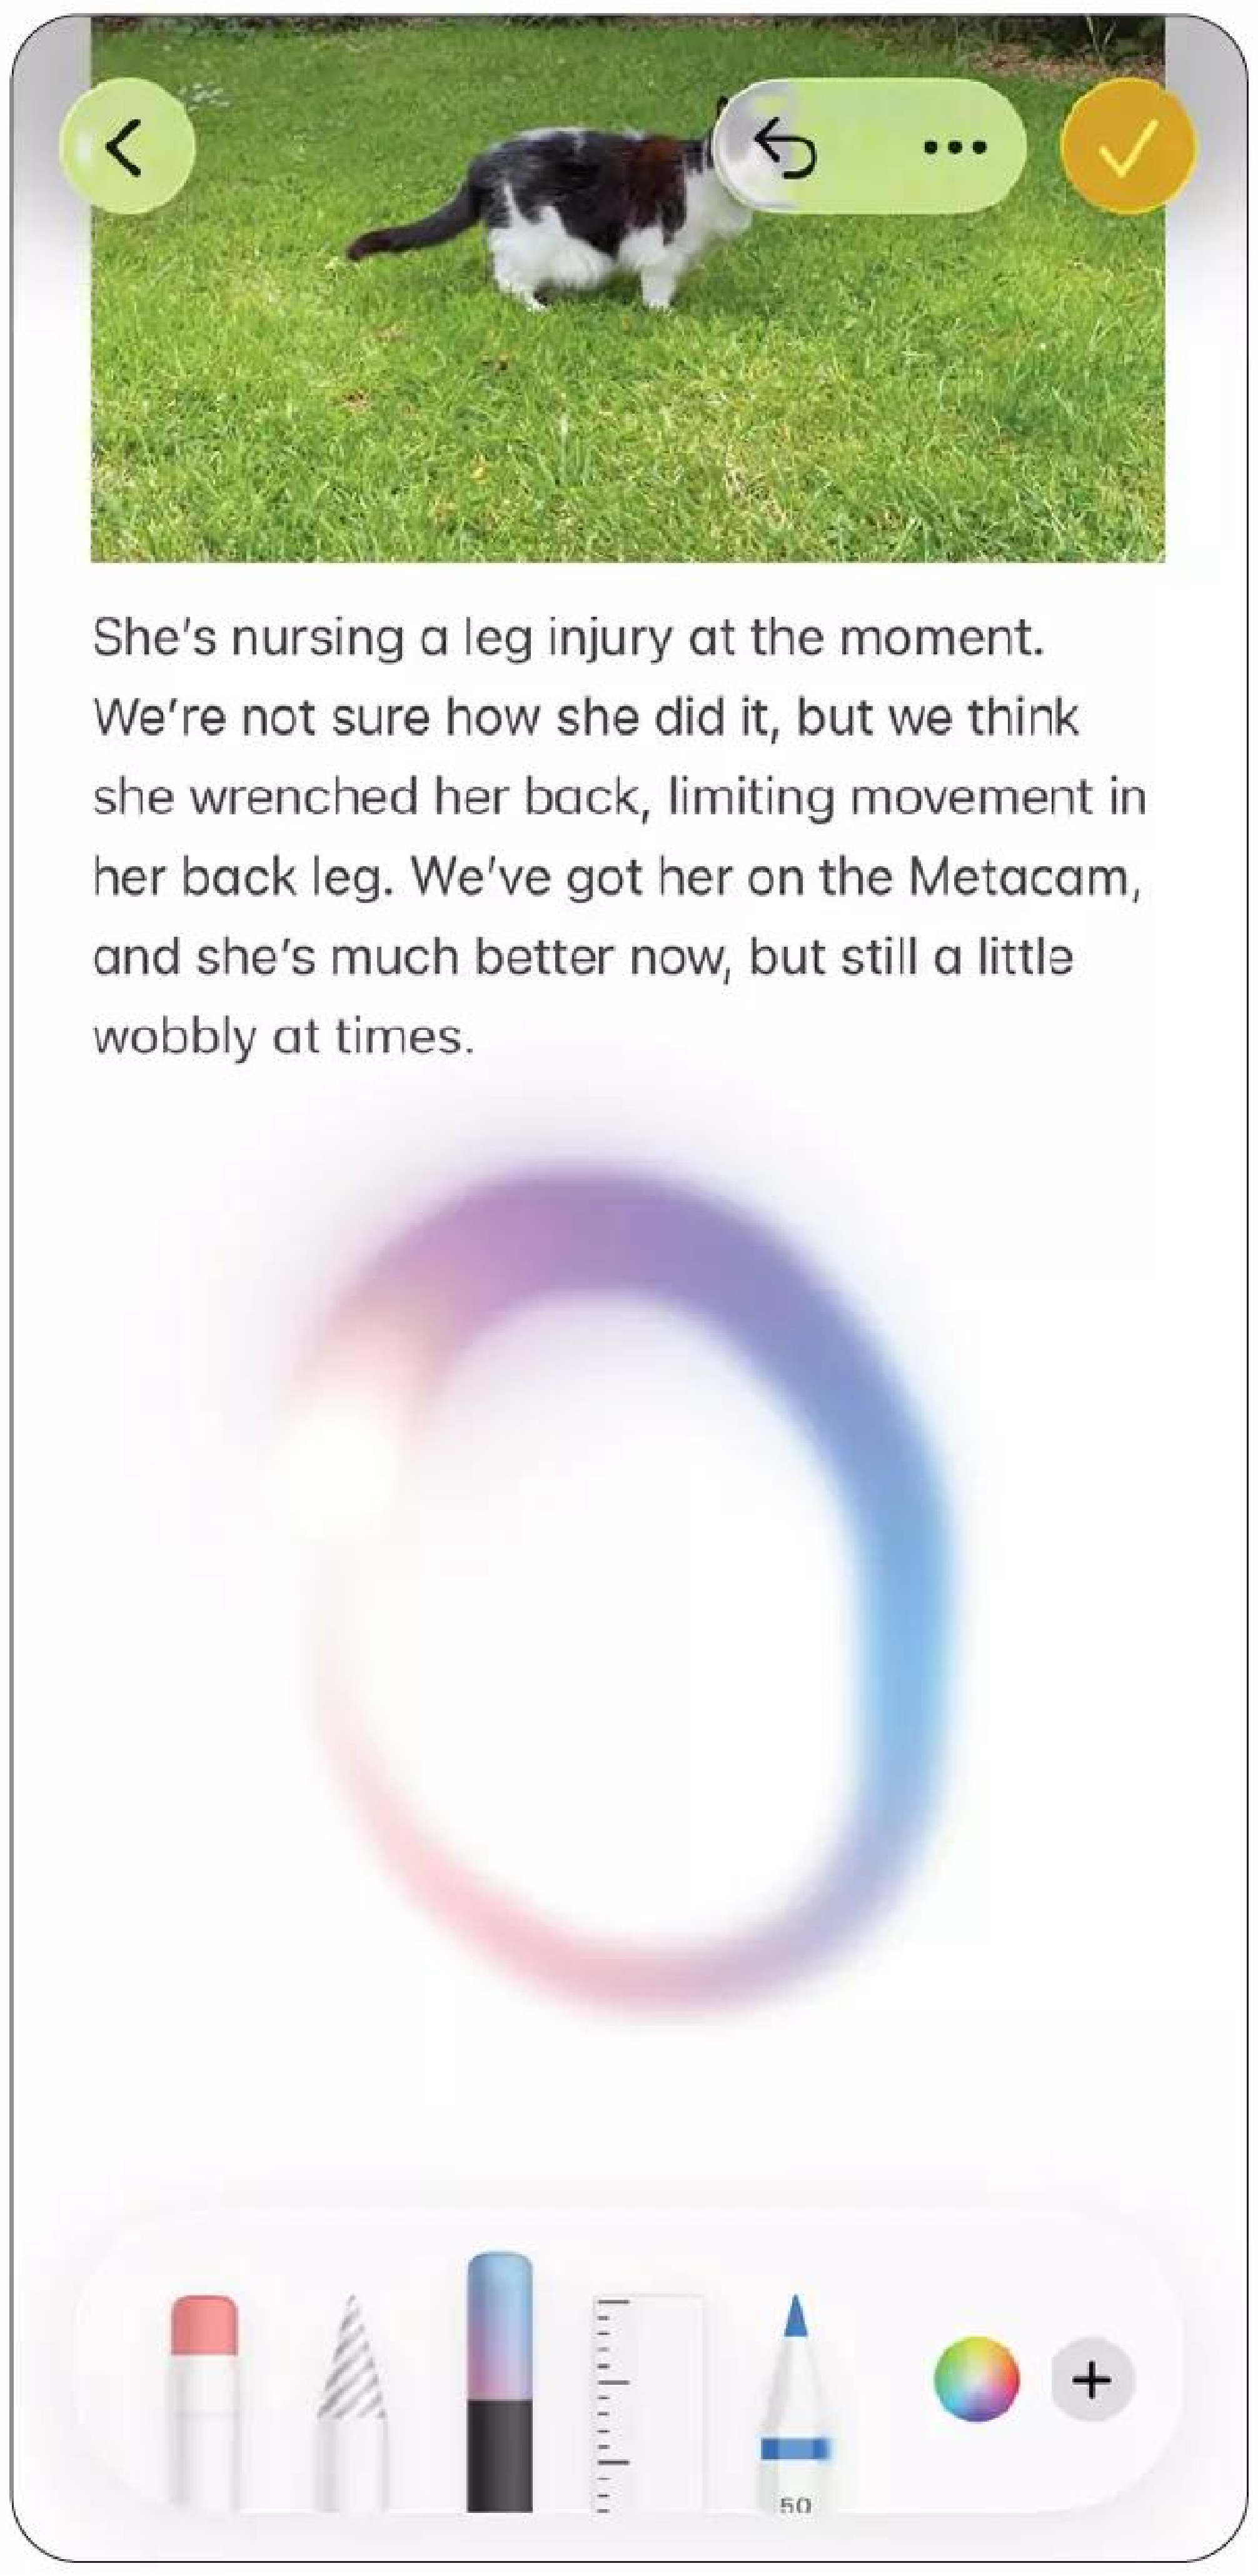
Apple's popular Notes app gains three great new features that use Apple Intelligence. We cover Writing Tools over the page, so here we'll take a look at Image Wand, which can produce art based on the context of your note or tidy up something you've already done, and the ability to record, transcribe and summarise audio speech recordings.

Image Wand

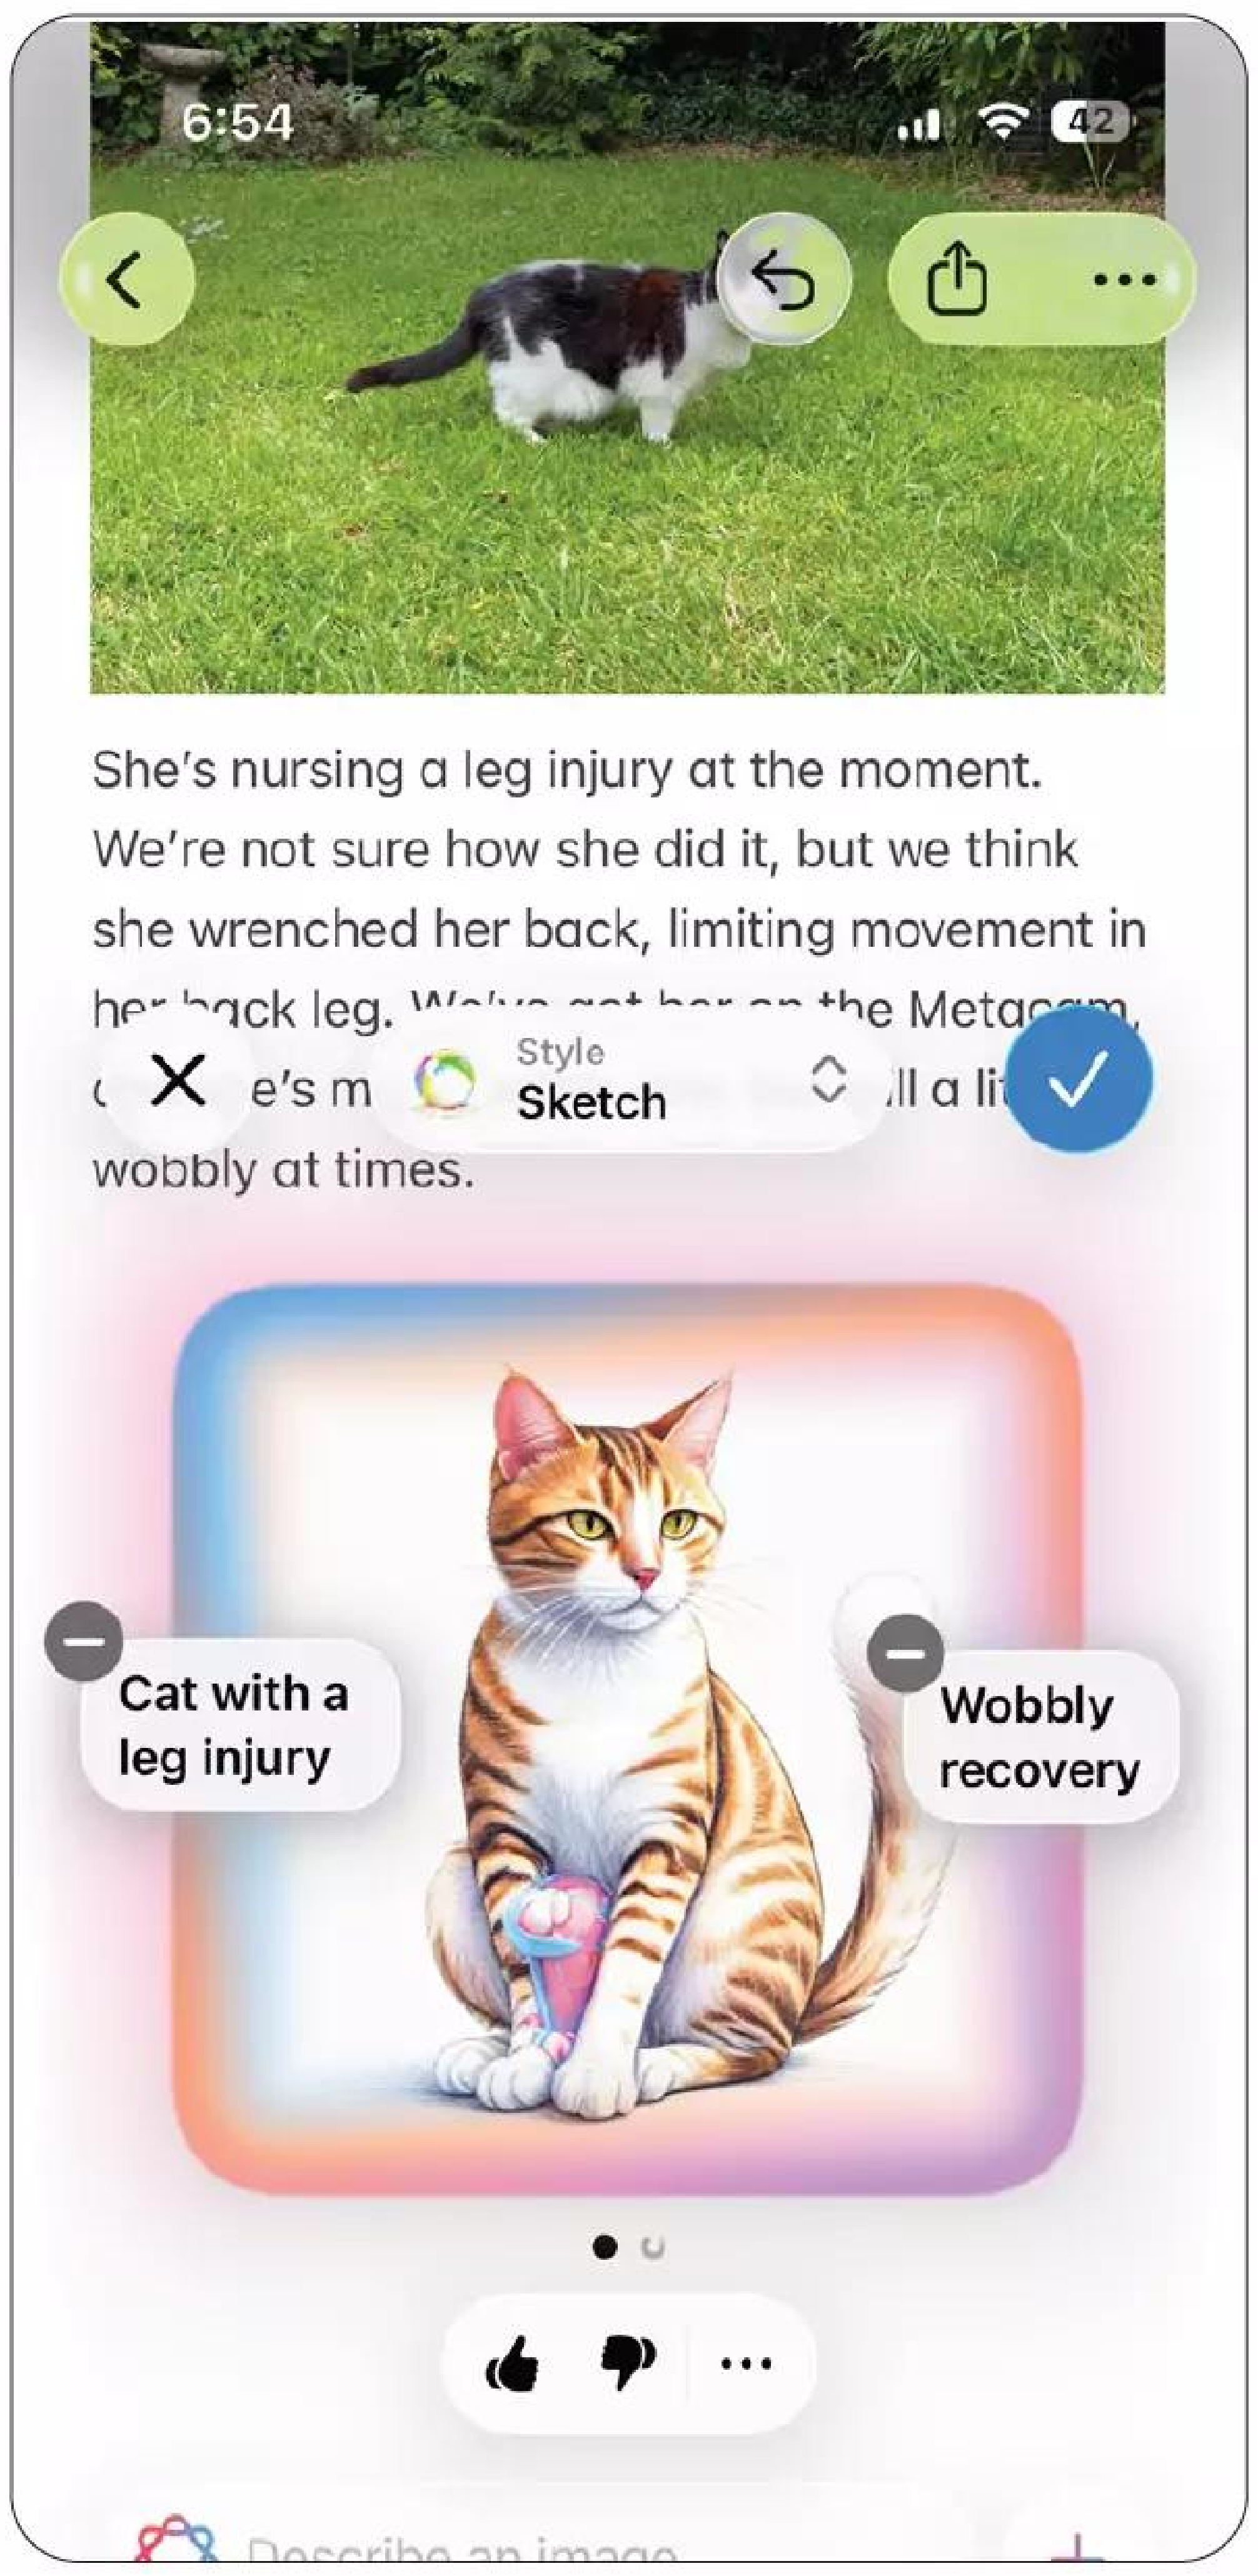


Distress rescue centre in Ipplepen. We got her in April 2021, when she was 18 years old, so she's now 20, but still sprightly and fit.

She's nursing a leg injury at the moment. We're not sure how she did it, but we think she wrenched her back, limiting movement in her back leg. We've got her on the Metacam, and she's much better now, but still a little wobbly at times.



She's nursing a leg injury at the moment. We're not sure how she did it, but we think she wrenched her back, limiting movement in her back leg. We've got her on the Metacam, and she's much better now, but still a little wobbly at times.



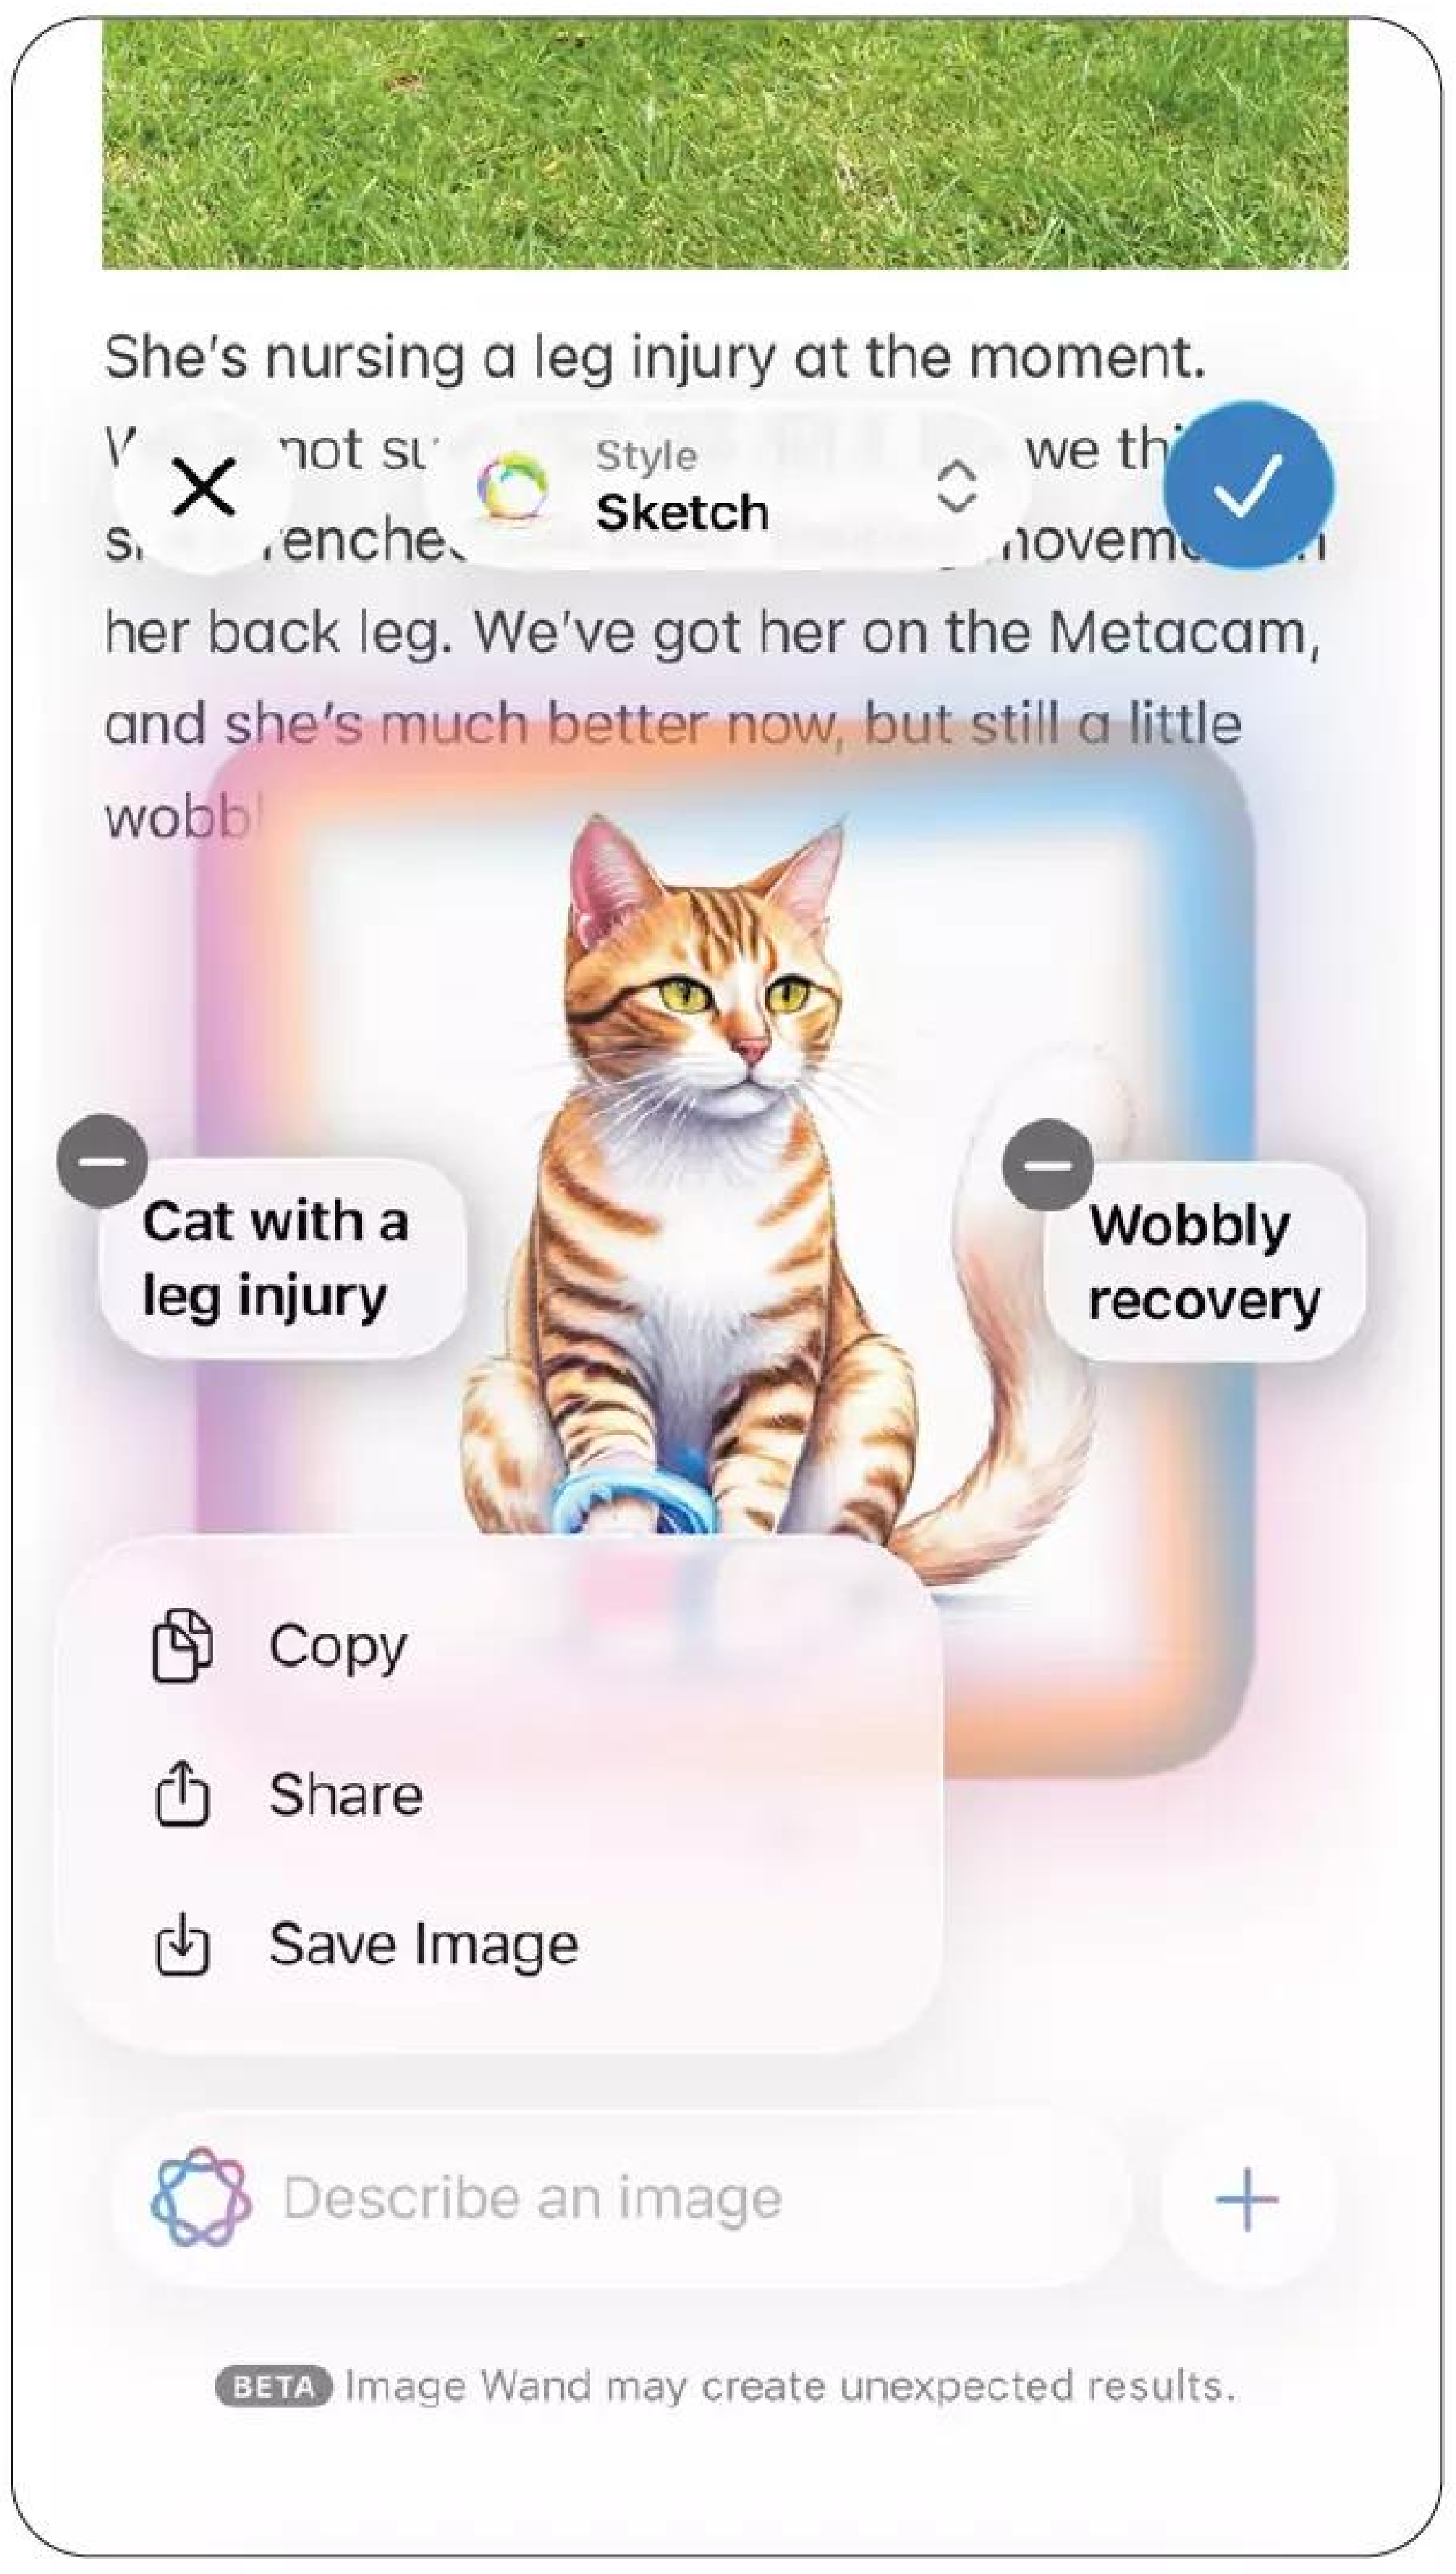
She's nursing a leg injury at the moment. We're not sure how she did it, but we think she wrenched her back, limiting movement in her back leg.

wobbly at times.

1 If you want an artistic image that suits a note you've already produced, first of all, open the note in question and open the Markup tools by tapping the pen in a circle icon. Look at the Markup tools – there's a new one, which looks like a magic wand. This is Image Wand. Tap it and work some AI magic.

2 With the Image Wand tool selected, draw a circle with your finger in the place where you want the image to appear. You see an on-screen effect that's full of colour, something common to most Apple Intelligence features on the iPhone. When done, the iPhone spends a little time thinking.

3 When Apple Intelligence has finished thinking, a picture is shown based on elements taken from your note. Like in Image Playground, you can remove elements by tapping their minus sign, add new ones using the Describe an image field and swipe left and right for different images.



She's nursing a leg injury at the moment.

her back leg. We've got her on the Metacam, and she's much better now, but still a little

4 Use the thumbs icons to give your opinion on whether the picture correctly interpreted your note. Tap the three dots icon for a menu that lets you Copy, Share or Save the pic.

5 Another way of using Image Wand is to start with a sketch in a note. Again, open the Markup tools and select the Image Wand. Draw a circle with your finger over the sketch you want to improve.

6 Apple Intelligence has a think, then asks you for a word or phrase that describes the sketch. Type them, then tap Done. An artistic picture is produced from your sketch and the words you typed.

1 Open a note (or start a new one). Tap the paperclip icon above the keyboard, and in the menu that appears, tap Record Audio. To start recording, press the circular red button at the bottom.

2 When done, tap Pause then Done. To see the transcript of your recording, tap the speech bubble with quote marks in it. If it's not there, your iPhone cannot transcribe the recording.

3 Tap the three-dots icon and you can rename, copy and search the transcript, or add it to the note as regular text. Tap Summary and Apple Intelligence summarises your transcript.

Apple Intelligence Writing Tools

The Apple Intelligence Writing Tools feature lets you refine your writing in bigger ways than merely checking the spelling. You can use it to proofread your words, checking grammar and syntax as well as spelling, and also revise it to make (say) an email more businesslike or friendlier. If you're faced with a long piece of writing, the feature can summarise it for you too.

Hey Jim,

Hope everything is OK with you, the wife, and your son. Are we set for that meeting with the shareholder's?

1 Writing Tools can be used almost anywhere in iOS where you can write. Here we're using it in the Mail app, but you can also use them in Pages, Notes and more. First of all, you need to write something. Writing Tools cannot (yet) generate original text for you, but it can revise text you've written.

2 When you've finished your first draft of whatever it is you're writing (here, it's an email), tap the chevron in the top-right corner of the keyboard, and then tap this, the Writing Tools icon. This brings up the Writing Tools window, from where you can choose how to manipulate your piece of text.

3 First of all, we'll use the Proofread option. As you can see, there are plenty of errors in our original email. Tap the Proofread button in the Writing Tools window, and Apple Intelligence reviews what you have written, correcting spelling and grammatical errors and generally tidying up your written text.

Notes on Our Cat

#Millie #cats

We got our cat (Millie) from the Animals in Distress rescue centre in Ipplepen. We got her in April 2021, when she was 18 years old, so she's now 20, but still sprightly and fit. She's nursing a leg injury at the moment.

9 You can use Writing Tools in other apps where you write too. Just look for the Writing Tools icon; the circular Apple Intelligence symbol with a pen in it. Here it is in the Notes app.

4 Apple Intelligence produces several Genmoji based on your description. Swipe left and right to review them all. Swipe to the end to make new ones.

5 Tap the tick to use one of the pics in whatever writing you were doing when you chose to make a Genmoji. Tap Done to stop using the Genmoji maker.

6 You can add regular emoji to your descriptions when making new Genmoji too. Just pick them from the options at the foot of the screen.
